

Light for the house and the garden 2025
Special accents for the private sphere

BEGA

The **BEGA Competence Center** in Menden, Germany, offers a comprehensive insight into our portfolio of high-quality indoor and outdoor luminaires for private and architectural applications.

Light for the house and the garden 2025

The possibilities for private illumination in the house and garden are often not utilised to their full extent. All the same, carefully coordinated lighting design can make your home more inviting and cosy. Areas such as access roads, entrances, patios and gardens offer numerous approaches for improving light quality.

A well lit garden becomes a natural extension of the living area and creates a special atmosphere. Apart from its aesthetic effect, good lighting also provides added safety.

The "Light for the house and the garden" catalogue shows how the lighting of indoor and outdoor spaces can be coordinated to experience light like never

before. More information can be found at www.bega.com.

Our products are sold through specialised electrical dealers, specialised luminaire dealers and the electrical trade. All goods, services and quotes supplied and/or submitted by BEGA to companies are exclusively subject to our terms of delivery, available at www.bega.de/terms-of-delivery.

BEGA showrooms

Our website, catalogues and brochures provide a good overview of our range. However, the visible expression of the quality and beauty of our luminaires is the original itself. Their high-quality workmanship and clear design language are particularly evident in our showrooms. Convince yourself of the sustainable lighting technology and the quality of workmanship and use. You can experience all this first-hand in our showrooms. We look forward to your visit.

About us and our luminaires

BEGA is a global leader and innovator in the sector for sophisticated architectural lighting. We have been developing and producing high-quality luminaires for virtually all areas of interior and exterior design for 80 years. Our work is based on a clear focus on sustainability. BEGA is synonymous for reliable quality and consistent re-examination under the motto:

Sustainable by Design

We think of sustainability as the responsible use of environmentally friendly materials. It encompasses all aspects of what we do. Our products are designed to last and to reliably fulfil their function for many decades to come. We use only the very best materials and components, and all production is done at our own factories in Germany, Belgium, France and the US.

Our 20-year availability guarantee for luminaire components further extends the extremely high product service life of our products, allowing us to conserve valuable resources and ensuring their continued use after decades of reliable operation.

Light characteristics

Light distribution

Light distribution is an important factor in lighting design. The graphics help to better understand the light characteristics of a luminaire.

Asymmetrical light distribution for the illumination of wall surfaces

Narrow beam light distribution provides concentrated accents and hard shadows

Wide beam and very wide beam light distribution for room illumination – deliberate reflections of the light on the walls

Unshielded ceiling luminaires for general illumination

Shielded pendant luminaires emit focused, glare-free and downward directed light

Unshielded pendant luminaires for general illumination

Wall luminaires with **symmetrical light distribution** utilise the reflective properties of the installation surface

Wall luminaires with **asymmetrical light distribution** utilise the reflective properties of the ceiling

Wall luminaires with **symmetrical light distribution** for the illumination of floor areas near walls

Wall luminaires with **asymmetrical light distribution** for ambient floor lighting

Unshielded wall luminaires for general illumination

Garden luminaires with **unshielded light distribution** for uniform light around the luminaire

Garden luminaires with **symmetrical light distribution** for staging of the area around the luminaire

Garden luminaires with **asymmetrical light distribution** direct the light into the depth of the room and thus serve as ideal pathway lighting

Symmetrical light from inside the ground accentuates architecture and plants

Asymmetrical light from inside the ground for the staging of architectural features and plants

Light colours

The colour temperatures for LED luminaires are specified in Kelvin (K). The LED luminaires in this brochure are available in the light colour warm white (3000K). For some of the luminaires, the deliverable light spectrum starts at 2700 Kelvin, similar to the light of a conventional light bulb. We also offer other luminaires in neutral white (4000K), which is generally used in traditional office lighting.

2700K

3000K

4000K

Materials and surface technologies

Materials

We take much pride in the selection of superior materials for the design and manufacture of our products. Cast aluminium, for example, not only guarantees superior strength – it also dissipates heat, which is a definite plus for the thermo-management of the luminaires. Aluminium offers optimal stability, is lightweight, and corrosion-resistant.

If criteria such as weight reduction and strength are paramount, high-strength synthetic materials are the first choice. Through additive manufacturing, we guarantee the resource-efficient realisation of precise designs. Translucent synthetic materials in combination with our three-ply opal glass ensure uniform lighting with very good light distribution and high light transmission.

The thick-walled crystal glass with its frosted rim creates atmospheric light accents. Safety glass is used wherever luminaires need protection against dust and water.

A clever combination of materials ensures optimal functionality, and gives our products a unique and high-quality look and feel.

Surface technologies for an exceptionally long durability

BEGA luminaires are designed to blend harmoniously into the overall architecture as an aesthetic architectural detail and to fulfil their tasks over a long period of time. As part of our commitment to sustainability, we pay special attention to efficient surface protection for all our luminaires. Here, we focus on corrosion resistance, weather resistance and light stability – and not just because of the very different climatic conditions around the world.

Our registered trademarks BEGA Coating Technology®, BEGA Unidure®, and BEGA Tricoat® guarantee surface protection of the highest quality.

BEGA Unidure®

BEGA Unidure® is an extremely weather resistant powder coating, which we use to meet maximum requirements for weather resistance and light stability.

BEGA Tricoat®

We achieve the best possible surface protection and optimal corrosion resistance with our BEGA Tricoat®. The technology is based on specially coordinated inorganic and organic coating processes – which are applied to extremely resistant alloys.

Our technologies

LED technology

BEGA luminaires contain LED modules from our proprietary manufacture that match each luminaire to perfection. We consistently follow our own quality expectations in the selection and processing of our LED components – which significantly surpass market-typical criteria.

Thermo-management

Premium-quality components, optimal thermal component protection, and constructive measures to ensure favourable temperature conditions are the cornerstones for our comprehensive thermo-management. The protective devices are optimally matched to each other and therefore significantly extend the service life of the electronic components in our luminaires.

Optical systems

Complete lighting control, perfect light deflection and the use of only extremely durable materials are the basic ingredients, with which we develop our optical systems. Not a single ray of light is lost and possible light pollution is counteracted.

Replacement and 20-year availability guarantee

Reliability, product safety and exceptional durability characterise our BEGA luminaires. And if there is ever a need to replace a component at the end of its service life, we ensure the availability of replacement parts up to 20 years after the luminaire was purchased.

Efficient light control in Smart Homes based on the integration of intelligent standards

What are the advantages of light control in private homes?

Controlling the light means dimming individual luminaires, bundling them in groups, and switching them on and off at specific times. An intelligent light control system does all that and more.

Our light control systems were developed specifically for daily routines. For a home where everything is straightforward. For an increasingly convenient automation of your lighting. The control system can also be used offline if you like, i.e. without an internet connection. You can still use the app on your smartphone for easy light control. Alternatively, you can control your Smart Home online – no matter where you are.

BEGA products operate with established wireless communication standards. That ensures their broad-spectrum compatibility with virtually any other smart devices.

→ bega.com/smart

Easy light control

BEGA Smart gets you started with smart illumination with ease. Everything is super easy to understand, intuitive, and clearly structured in the free BEGA Smart app. Simply download the app and get started: Take control of a whole range of devices, functions, and use case scenarios.

BEGA Smart is a ideal solution for on-site control over your indoor and outdoor lighting – without any need for an Internet connection.

→ bega.com/wiburler

Integrated light control

The brand and technology independent wiburler platform creates a network of your lighting and many other smart components in your home. It all comes together conveniently via wiburler pro. The various components are configured using the wiburler app.

With the central app, you can create lighting scenes online and call them up flexibly, adjust the heating, operate the shutters and secure your home.

→ bega.com/dali

Easy Smart Home integration

All BEGA luminaires with DALI operating devices are DALI controllable – the premiere industry standard for professional light control. They can also be optionally integrated into higher-level home automation systems. DALI gateways guarantee the necessary compatibility with all common technologies (KNX, Loxone, Busch-free@home, Homematic IP etc.).

BEGA Smart

For straightforward **light control** in your own four walls

The individual BEGA Smart components are connected wirelessly and generate an offline network. The individual devices communicate wirelessly and can be positioned at a distance of up to 30 metres from one another. This creates a wireless network in the house and garden that makes your home smart and convenient.

App BEGA Smart

is required for the configuration of devices, the creation of automation routines, and to control the illumination

Smart Plug

integrates indoor devices with Schuko plug in BEGA Smart

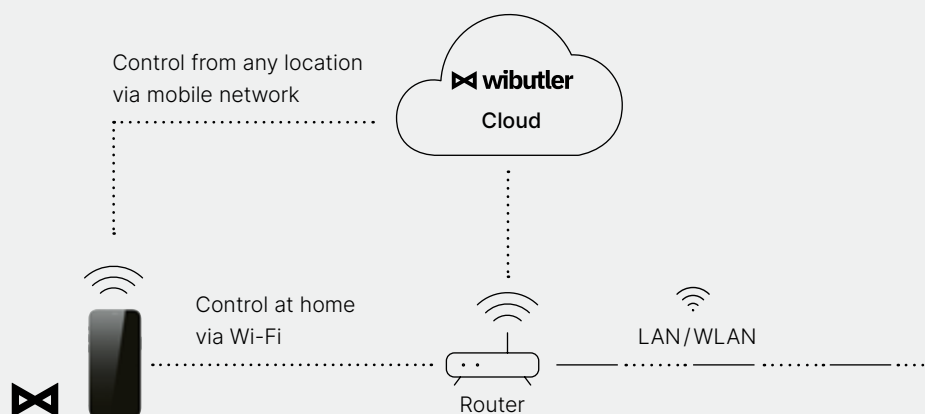

Smart Socket

integrates outdoor devices with Schuko plug in BEGA Smart

wibutler

For smart control **of your entire home** via the Internet

With the wibutler pro you can control and monitor your Smart Home anywhere and any time. The wibutler pro allows you to control and monitor your smart home from anywhere.

wibutler App

Control via the wibutler app from anywhere using the mobile network, or at home over the Wi-Fi network

30m

Optional:

Remote Control ONE and PRO

controls the light as a convenient remote control and is set up with the BEGA Smart app

30m

Optional:

Smart Rotary Dimmer

controls the light as a rotary-push switch, is conveniently placed in device boxes and set up with the BEGA Smart app

Smart DALI-Controller

can be placed in e.g. canopies, device and distribution boxes, and integrates luminaires with DALI operating devices in BEGA Smart

Smart Link

integrates the illumination system BEGA UniLink® Play into BEGA Smart

Zigbee lamps

integrate luminaires with E27 or E14 sockets into BEGA Smart

Control without wibutler app

wibutler pro

forms the backbone of building automation and facilitates the configuration as well as control of all system components in the house and garden

Smart Home components

by various manufacturers from other areas of building technology are networked wirelessly

Control without app

Alternatively, wibutler pro can also be controlled with conventional switches or a voice assistant

Smart luminaires, smart components

Components that are easy to use and integrate transform our holistic BEGA Smart light system into the control centre for all lighting and control requirements. BEGA Smart interlinks indoor and outdoor living spaces. Convenient, flexible and always on the cutting edge of technology.

Remote Control ONE and PRO

The remote controls ONE and PRO give you complete control over your smart lighting system. Simple, user-friendly operation – with a range of up to 30 metres. The BEGA Smart app facilitates the configuration of countless functions like the control of luminaires, luminaire groups, and access to pre-programmed scenarios.

The PRO remote control features an e-paper display with a touch ring and two Favourite buttons; the ONE remote control offers ten freely configurable buttons for easy and intuitive use.

10 526	Remote Control ONE
13 569	Remote Control PRO

Smart Rotary Dimmer

The Smart Rotary Dimmer combines smart home convenience with a conventional and familiar control device in the Smart Home world. Once professionally connected to the mains voltage by a qualified electrician, luminaires in the BEGA Smart system can be conveniently controlled via app or remote control. The Smart Rotary Dimmer is compatible with common switch programs, making it the right choice for anyone who value classic haptic operation.

71 148	Smart Rotary Dimmer
--------	---------------------

Light control via app – simple and convenient

The free BEGA Smart app is the control hub for the BEGA Smart Home system. It controls each part of the system across short distances via Bluetooth and allows each system component to be individually programmed. Configuring how and when a luminaire or group of luminaires should behave is easy and intuitive. It takes only the touch of a button for all the luminaires to spread their cosy light. The room can be brightly illuminated at a pre-determined time. The app makes it possible to create countless lighting scenarios that can be controlled manually or automatically.

Smart Plug

Our Smart Plug makes luminaires and other devices with a safety plug fit for the future. Smart control combines convenience, security, and energy efficiency for the entire home. The coffee machine switches on automatically in the morning, the socket strip in the office switches off at night, and the floor luminaire bathes the living room into a warm, cosy light as the sun sets.

71 190 Smart Plug

Smart DALI-Controller

DALI is generally regarded as the ideal solution for professional light control. However, electrical installations in older buildings, and especially in historic structures, often lack the two free wire strands required for control systems. That is why technical assistance is a must if you want to take advantage of the many benefits DALI luminaires have to offer.

Our Smart DALI controller offers exactly that. This controller ensures that DALI luminaires can be connected to three-strand supply lines, and fully controlled wirelessly via BEGA Smart in new builds and in refurbishments.

DA DA N L

71 149 Smart DALI-Controller

Smart Home control with the wibutler app

With just a few clicks, you can store practical time-controlled automations and if-then rules (e.g. in conjunction with a twilight sensor) to efficiently control the smart home components.

wibutler pro

wibutler pro is the centrepiece of your digital building control. BEGA Smart components can be integrated into a Professional Smart Home alongside products from other manufacturers via wibutler pro – including secure access via the cloud and from anywhere. The cross-technology control system allows the convenient operation of lighting, shading, heating, plumbing, air conditioning, security and other technologies with just one single app. That is how a safe networking of more than 300 devices from 40 top brands becomes possible.

Recessed ceiling luminaires

Recessed ceiling luminaires are an excellent choice for general illumination and extremely versatile in architecture. With a symmetrical very wide beam light distribution, they create uniform illumination even if the light points are spaced at larger distances from each other. Variants with symmetrical-narrow beam light distribution are particularly suited for accenting narrow ground surfaces such as corridors or stairs.

Early planning

The installation of recessed ceiling luminaires in cast ceilings requires careful planning during the shell construction phase, as the number of luminaires, distances and illumination level have to be determined early on. It can also be beneficial to use an installation housing here. For installation in suspended ceilings, installation at a later time is often also appropriate. The use of quality products with guaranteed availability of replacement parts ensures a long-term, low-maintenance solution.

We define **installation depth** as the housing height of a recessed luminaire including cable guide (if any). Please note that the exact installation dimensions depend on the size of the luminaire, external power supply units and the thickness of the suspended ceiling as provided in the instructions for use of the luminaire. We recommend considering this aspect in your lighting design planning.

Page 39

Recessed ceiling downlights

Square recessed ceiling luminaires with various light characteristics offer solutions for many lighting scenarios. Symmetrical light distribution with narrow, wide, or very wide beam light distribution illuminate the ground area directly below from the ceiling. A wide or very wide beam light distribution is generally the best choice for the illumination of ground surfaces. A narrow beam distribution on the other hand, would be advisable for narrow spaces like corridors, hallways, or staircases.

An asymmetrical wide beam light distribution is generally used where wall surfaces are to be illuminated from the ceiling.

Suitable installation housings are available for installations in concrete ceilings. Detailed information can be found on bega.com in the instructions for use for these luminaires.

Page 41

Recessed ceiling spotlights

The series of our smallest recessed ceiling luminaires combines extremely small dimensions with a surprisingly high light output.

Recessed ceiling spots are perfect for lighting situations where small points of light are used for creating brilliant illumination. Perfect examples for their use would be under roof overhangs and cantilever plates, or over patios and house entrances. These recessed ceiling spots are also very flexible in terms of their electrical connection: Several 48-Volt luminaires can be operated via a single power supply unit (to be ordered separately).

Recessed housings are available for installations in concrete ceilings. Detailed information can be found on bega.com in the instructions for use for these luminaires.

Page 43

Recessed ceiling luminaires

Compact downlights with cast aluminium trim ring

Recessed ceiling luminaires are an option for unobtrusive, barely visible room illumination from the ceiling. The issue here is to choose the right type of light distribution: The rotationally symmetrical light distribution is comparable to the light cone of a floodlight and is available with three different light characteristics. Luminaires with asymmetrical light distribution are used to illuminate wall surfaces. The highly efficient recessed ceiling luminaires come with external, DALI controllable power supply units.

Suitable installation housings are available for installations in concrete ceilings. Detailed information can be found on bega.com in the instructions for use for these luminaires.

On Pages 33 and 35, you will find luminaires with the same light distribution type, but various trim ring finishes.

Recessed ceiling luminaires

Compact downlights with stainless steel trim ring

Stainless steel is a highly durable material with a unique look for interior or outdoor applications. These recessed ceiling luminaires with stainless steel ceiling trim rings are available in a wide variety of light distributions. Rotationally symmetrical light distribution – which is comparable to the light cone of a floodlight – is available with three different light characteristics.

Luminaires with asymmetrical light distribution are used to illuminate wall surfaces. These highly efficient recessed ceiling luminaires come with external, DALI controllable power supply units.

Suitable installation housings are available for installations in concrete ceilings. Detailed information can be found on bega.com in the instructions for use for these luminaires.

On Pages 31 and 33, you will find luminaires of the same light distribution, but with various trim ring finishes.

Illumination from the ceiling

Ceiling luminaires are a flexible and versatile solution for general illumination. They boast a low installation cost and the option of setting light points at a later time – ideal for plastered ceilings or suspended ceilings. Their wide beam light distribution ensures uniform brightness, even where there are larger distances between the light points. Variants with focused light guidance are particularly suited for targeted illumination of narrow areas such as corridors, staircases or hallways.

High-quality light

Thanks to their versatility, ceiling luminaires are particularly suitable for rooms in which adaptability is required without sacrificing high lighting quality. They complement the product line perfectly and offer a practical alternative for applications that do not require fixed integration into the ceiling design.

Page 23

Ceiling luminaires

Very compact and efficient ceiling luminaires available with four light distribution types. The symmetrical light distribution is comparable to the light cone of a floodlight and is available with three different light characteristics. Luminaires with asymmetrical light distribution are used for the illuminate of wall surfaces. Their clear geometric shapes create highlights for the interior design theme.

Ceiling luminaires · Downlights

Light output not always depends on size:

These compact, surface-mounted spots offer excellent performance and superior component quality. These spots are a great choice wherever small points of light are needed to accentuate a lighting situation, for example under roof overhangs and cantilever plates, over patios or a house entrance. These ceiling-mounted spots are also very flexible in terms of their electrical connection: Several luminaires can be connected to a single power supply unit (to be ordered separately).

Shielded wall luminaires – Directed light

Shielded wall luminaires illuminate ground surfaces in front of walls. They simultaneously illuminate and accentuate the installation surface and its structure. They can be arranged individually, in rows or as a group. Some luminaires with shielded light are available with both one-sided and two-sided light emission.

Indirect glare-free light

When it comes to wall luminaires with shielded light, the desired light effect plays a decisive role. In contrast to unshielded wall luminaires, whose luminaire bodies are in focus at night, shielded wall luminaires are restricted to their indirect glare-free light effect, and thus draw attention to the architecture and the surroundings rather than the luminaires themselves.

Different installation heights

Wall luminaires with shielded light are suitable for installation at various heights. They can be used in many ways: as location luminaires, for accent lighting or for wide-area illumination.

A single luminaire placed at a low height serves to highlight hazardous points, while a row of installed luminaires provides uniform illumination in corridors and along paths. Installation at greater heights enables glare-free illumination of wall surfaces.

Low installation costs

The work involved in installing wall luminaires is significantly less than for recessed wall luminaires. However, the overhang of the selected luminaire must be taken into consideration when planning.

DarkSky

The luminaires in our **Dark Sky** range direct their light onto the surface to be illuminated with high efficiency, while emitting less than 1% of their luminaire luminous flux into the upper half-space of the luminaire.

bega.com/darksky

Page 103

Wall luminaires · Directed light

Installed at a low height, the smallest of these wall luminaires with directed light serves as a location light. When installed at eye level, larger luminaires ensure bright and safe illumination of the installation surface and the ground. A reflector made of pure aluminium ensures an exactly defined light distribution.

Luminaires in this series emit less than one percent of their light into the upper half-space of the luminaire, helping to preserve the darkness of the night sky.

Wall luminaires · Shielded light

With these compact wall luminaires with light emission on one or two sides, brilliant crystal glass which is white on the inside produces a pleasantly soft light on the installation surface. During the day, the thick-walled glass emphasises the quality of the luminaires. When illuminated, the transparent glass edges create an impressive play of light and lustrous effects.

Arrangements with multiple luminaires create attractive light installations with graphic accents indoors.

The luminaires in our **Dark Sky** range direct their light onto the surface to be illuminated with high efficiency, while emitting less than 1% of their luminaire luminous flux into the upper half-space of the luminaire.

bega.com/darksky

Wall luminaires · Shielded light

With these rectangular and semi-circular wall luminaires with light emission on one or two sides, the precise housing with a flush white safety glass creates a soft and even light distribution. When multiple luminaires are arranged in groups, a large accent is created on the façade with soft light. Subtly elegant wall luminaires that decorate facades with their light effects or offer functional illumination for relevant areas.

Luminaires in this series with only a downward-directed light emission emit no light into the upper half-space of the luminaire, helping to preserve the darkness of the night sky.

Unshielded wall luminaires

Unshielded wall luminaires illuminate entrance areas, corridors, staircases and areas in front of buildings with a soft and very wide beam of light. They can be arranged individually, in rows or as a group. They structure and accentuate wall surfaces with their graphic shapes even during the day.

Clear basic shapes

At night, the luminaire bodies of unshielded wall luminaires are much more noticeable than shielded wall luminaires. Highly visible light graphics in clear basic shapes guide the view and emphasise the structure of the architecture. Unshielded wall luminaires enhance the feeling of safety, because their immediate surroundings are very well illuminated. Their light distribution creates softly outlined shadows, increasing visual comfort.

Good visibility

Installing wall luminaires requires considerably less effort than installing recessed wall luminaires. Unshielded luminaires are also suitable for house numbering or other signage due to their good visibility and white glass surfaces. Luminaires with a suitably large surface are available on request as house number luminaires with weatherproof lettering.

Traditional shapes

Within the lantern, whether round or rectangular, the unshielded light source is protected behind a grating.

Wall luminaires

This group of wall luminaires features a modern, flat design. They brighten their surroundings and the installation surface with attractively soft light. Brilliant crystal glass contours add shape to the luminaire glass and highlight the superior quality of these luminaires during the day and at night. They brighten their surroundings and the installation surface with attractively soft light. They are available as versions shielded on one or two sides.

The horizontal version of these impact-resistant LED wall luminaires generates a wider beam of light, while the upward shielding creates a contrast to the downward emitted light. They are ideal for house entrances, for example, where smart lighting is required to reinforce a feeling of safety.

All luminaires in this series can be mounted on the wall in any installation position.

Ceiling and wall luminaires · Wall luminaires

The circular shape of the crystal glass covers is a central design element of these impact-resistant ceiling and wall luminaires. Their striking details include the “iced edges” created by the high material thickness of the glass, which also produces a uniquely lustrous effect when illuminated. The thick-walled glass cover ensures the necessary durability for outdoor applications.

One particular variant of the impact-resistant wall luminaires is characterised by targeted upward shadowing. This creates a clear contrast to the downward directed light emission and skilfully attracts the attention to the area of wall and floor beneath the luminaire.

Wall luminaires

The thick-walled crystal glass of these wall luminaires with impressive “iced edges” forms a single unit with the die-cast aluminium housing. The unshielded soft light illuminates the installation surface and the area in front of the luminaire. When illuminated, the transparent glass edges create a unique play of light.

Luminaires marked with BEGA Smart can be integrated into this system and controlled wirelessly.

Wall luminaires

The luminaire glass features brilliant crystal glass contours in this wall luminaire series shielded on one or two sides. The premium-quality luminaires in a modern, flat design illuminate their surroundings, as well as the installation surface with attractively soft light and brilliant light accents.

On request, the luminaires of this series are also available with weatherproof figures. This allows house numbers to be read easily, even from great distances. By day and by night.

These luminaires are optionally available with an twilight switch.

House number luminaires

These house number luminaires are used for orientation in the vicinity of the building. They are also available with additional downward light emission to illuminate the wall surface and the floor below the luminaire. The extremely low power consumption provides energy-efficient and sustainably cost-effective lighting.

These luminaires also feature an impressively low profile.

House number luminaires

These house number luminaires with twilight switch produce soft, unshielded light. They are particularly suitable for continuous operation due to their low power consumption and built-in twilight switch. This ensures excellent legibility of house numbers even at great distances by day or night. The wide frame surrounding the glass clearly separates the luminaire from the bright wall.

Wall luminaires

Thanks to the timeless cylinder shape of these luminaires, they create eye-catching points of interest during the day, and aid orientation at night. With their clear design and premium-quality technology, they blend into any architectural theme – individually or in groups – yet still remain individual design elements. These wall luminaires also offer impressive installation options.

They are suitable for a wide range of applications – in part due to the narrow wall mounting – for example on pillars, pilasters and walls.

Wall luminaires

The shape and look of this wall luminaire is reminiscent of the traditional lantern with unrivalled variety. Initially, lanterns were used for the illumination of homes and private outdoor spaces, and were often the only source of light directing the way to the gate or entrance door. Today, a white, light-diffusing cylinder has taken over from candles – state-of-the-art LED technology brightens the lantern's surroundings, while continuing its long tradition.

The high protection class, paired with top of the range surface coating makes this luminaire series highly versatile and, of course, durable. We also offer the wall luminaires in a bronze colour and with two separate light sources.

Model with decorated rear panel

Through the interplay of light and shadow, the textured surface of the back panel creates delightfully aesthetic lighting effects.

Wall luminaires

These wall luminaires in basic square designs are a modern interpretation of the traditional lantern: featuring a clear design language and the latest LED technology. They are contemporary and innovative and bridge the gap to their predecessors.

As a combination of creative lighting technology and classical silhouette, these wall luminaires are ideally suited for applications in historical or modern architecture alike. One enormous extension of the range of applications for these fittings is the option of changing the light emission on the installation surface with a textured rear panel.

We offer these wall luminaires in two different lighting variants. With a continuous illuminated cylinder or divided into two convex areas for interesting insights. The luminaires are also available in a bronze colour.

Garden and pathway luminaires

Directed light

Garden and pathway luminaires round off the garden architecture. They provide orientation in walking zones and they accentuate flowerbeds and terraces. At night, they highlight the structure of outdoor areas, and guide and direct people. They can be permanent or portable, depending on the desired installation site.

Glare-free illumination

Placed in rows, these luminaires provide even and discrete illumination of paths. The directed light ensures glare-free illumination of the immediate surroundings of the luminaires. At night, plants and flowerbeds can be highlighted without the eye-catching presence of an unshielded luminaire.

Two forms of mounting

Garden and pathway luminaires are available for two different forms of mounting. Using an anchorage unit made of hot-dip galvanised steel, they can be installed in unpaved surfaces such as flowerbeds.

Luminaires with a screw-on base are suitable for mounting on foundations provided by the customer or on another paved surface.

Dark Sky luminaires in this series emit no light into the upper half-space of the luminaire, helping to preserve the darkness of the night sky.

How many luminaires do I need?

Our product pages outline the recommended light point intervals for our garden and pathway luminaires. If you have any further questions about planning your lighting project, we will be happy to help.

+49 2373 966 -0 · info@bega.com

Installation options for the permanent installation of BEGA garden and pathway luminaires

Garden and pathway luminaires for private use are fixed into the ground using an anchorage unit made of hot-dip galvanised steel or screwed onto a foundation provided by the customer using a screw-on base. Delivery will optionally include an anchorage unit or a screw-on base.

Anchorage unit

For installations in flower beds or on unpaved ground.

Screw-on base

For installation on on-site foundations or other paved areas. In some model series, a supplied cover plate between the vertical luminaire tube and the screw-on base covers the mounting screws.

DarkSky

The luminaires in our **Dark Sky** range direct their light onto the surface to be illuminated with high efficiency, while emitting less than 1% of their luminaire luminous flux into the upper half-space of the luminaire.

bega.com/darksky

Battery-powered table lamps

Light on the garden table quickly and conveniently – without cables. The BEGA battery-powered table lamps will keep you sitting outside on a warm summer evening for longer. With a battery capacity of twelve hours, summer nights can turn into days.

The luminaires dimmable in four increments are oases of light in the dark. And if they are ever forgotten in the garden: The interior of the robust housing, which is available in two shapes, is IP 54-protected to ensure rain will not do the luminaire any harm.

Luminaires in this series emit less than one percent of their light into the upper half-space of the luminaire, helping to preserve the darkness of the night sky.

Garden and pathway luminaires
Downward-directed light

The light distribution of these garden and pathway luminaires with shielded, directed light is rotationally symmetrical with a very wide beam – positioned either centrally or as a flat cylinder on a tube. These luminaires are ideal in particular for accentuating areas of the garden, for example for installation between medium-height plants. Their warm white light is absolutely glare-free.

The luminaires are suitable for through-wiring.
You will find more details and explanations on Page 95.

DarkSky

The luminaires in our **Dark Sky** range direct their light onto the surface to be illuminated with high efficiency, while emitting less than 1% of their luminaire luminous flux into the upper half-space of the luminaire.

bega.com/darksky

Garden and pathway luminaires
Shielded light, directed downwards

The two series of shielded luminaires create an impressive visual effect on the ground with directed light and a shielded light source.

The warm white light is inviting, structures and accentuates the garden and at the same time highlights the unique design of the luminaire.

Both series feature lines of sight that make the luminaires seem transparent.

Garden and pathway luminaires for the private garden, house entrance and for many situations on paths and terraces. In addition to their lighting function, they can divide and structure outdoor spaces and areas, especially when arranged in groups.

The luminaires are suitable for through-wiring. You will find more details and explanations on Page 95.

Garden and pathway luminaires
Striking recess as reflection surface

The special material quality of the BEGA luminaires and an extraordinary lighting design characterise these garden and pathway luminaires. The light point is integrated as a cut-out in the bollard tube of the luminaires. The surprising light staging and attractive lighting effect add a decorative touch to any garden by day and by night. They enable an accentuated lighting design.

The inner surface of the luminaire inside the recess is optionally available in graphite, to match the bollard tube, or bronze, which adds a special visual accent to the appearance and the effect of the directed light.

The garden and pathway luminaires are optionally available with an anchorage unit or screw-on base, and elegantly blend into any private garden, thanks to their slender proportions.

The luminaires are suitable for through-wiring. You will find more details and explanations on Page 95.

Garden and pathway luminaires Shielded light, directed downwards

These all-round shielded garden and pathway luminaires with 360° light emission exclusively direct the light downward and ensure absolutely glare-free, targeted illumination. The luminaires can be networked, switched, dimmed and adjusted to a colour temperature of 3000 or 4000 Kelvin. Luminaires with PIR sensor can control other luminaires that are networked via BEGA Smart after sunset and when motion is detected. Alternatively, other luminaires can be controlled via the integrated relay output.

Luminaires in this series emit no light into the upper half-space of the luminaire, helping to preserve the darkness of the night sky.

The luminaires are suitable for through-wiring. You will find more details and explanations on Page 95.

Garden and pathway luminaires

Unshielded light

Garden and pathway luminaires with unshielded light complement garden architecture. They provide orientation in walking zones and they accentuate flowerbeds and terraces. At night, they add the required structure to outdoor areas, and guide and direct people.

Safety

The unshielded light of these luminaires makes people easily identifiable. Unshielded luminaires also enhance the feeling of safety because their immediate surroundings are very well illuminated.

Even at greater distances, these luminaires are highly visible and lend the area in which they are installed structured depth.

Orientation

The targeted use of unshielded luminaires enables quick and easy identification of terrain and pathways. In the case of spheres and cylinders, the unshielded luminaire body can serve as an attractive design element during the day and at night.

How many luminaires do I need?

On our product pages, we provide the recommended light point intervals for our garden and pathway luminaires. If you have any further questions about planning your lighting project, we will be happy to help.

Installation options for the permanent installation of BEGA garden and pathway luminaires

Garden and pathway luminaires for private use are fixed into the ground using an anchorage unit made of hot-dip galvanised steel or mounted on a foundation provided by the customer using a screw-on base. Delivery will optionally include an anchorage unit or a screw-on base.

Anchorage unit

For installations in flower beds or on unpaved ground.

Screw-on base

For installation on on-site foundations or other paved areas. In some model series, a supplied cover plate between the vertical luminaire tube and the screw-on base covers the mounting screws.

Page 71

Garden and pathway luminaires · Unshielded light

These garden and pathway luminaires with unshielded light are designed for a variety of lighting requirements. A frame made of cast aluminium surrounds the thick-walled luminaire glass, lends stability and at the same time turns the luminaire into a modern design object. The soft light enables near shadow-free illumination of the luminaire surroundings.

You will find more details and explanations for installation on Page 115.

Garden and pathway luminaires · With safety guard

These two garden and pathway luminaire variants, available in two sizes, are equipped with a safety guard – either all the way round or only on one side. This allows them to be individually adapted to different architectural dimensions. The three-ply, hand-blown opal glass creates pleasantly soft and convenient illumination of the surroundings. The luminaires in this series are also available with a built-in passive infrared motion and light sensor that reacts to thermal radiation in the dark and switches the luminaire on when it detects movement by people or animals.

The luminaires are suitable for through-wiring. You will find more details and explanations for installation on Page 115.

Luminaires marked with BEGA Smart can be integrated into this system and controlled wirelessly.

Garden and pathway luminaires · Unshielded light

These garden and pathway luminaires with unshielded light create a pleasant light effect, either as a minimalistic cylindrical torch, or as an eye-catching sphere. The glass bodies in high-quality three-ply opal glass can also serve as a formal design element: clear and precise by day, a pleasant light effect with soft, warm white light by night.

The luminaires are suitable for through-wiring. You will find more details and explanations for installation on Page 115.

In-ground luminaires und permanent floodlights

These two luminaire groups can be employed in many areas of architecture and in the garden. There are two fundamentally different areas of application.

In-ground luminaires

This luminaire type accentuates plants and architecture in equal measure. The in-ground floodlights are resistant to foot traffic and can be positioned anywhere in soil or in gravel, since their placement does not constitute an obstacle.

These luminaires look best when arranged in straight lines.

At the same time, they define spatial structure.

The in-ground luminaires in this catalogue are installed in the ground in a “floating” style.

Permanent floodlights

Floodlights with mounting box can be installed in any position on the existing structure.

This makes it easy to set impressive accents on architectural details and plants.

The direction of the light emission is variably adjustable, allowing for local conditions and allowing you to change their direction whenever you like.

Walkover in-ground luminaires

Floodlights for installation in soil

These walkover in-ground luminaires – in a round or rectangular shape – featuring symmetrical or asymmetrical light distribution are a perfect choice for highlighting facades and wall surfaces, small to medium-sized trees, shrubs and other garden objects with warm white light. The garden and plants can be structured or accentuated with either symmetrical or asymmetrical light directed upwards.

The **half beam angle β** describes the size of the light cone with which an object or surface is actually illuminated. Luminaires with wider half beam angles should be chosen for short lighting distances, a focused light is recommended for larger distances.

Garden floodlights

The perfect solution for highlighting purposes and beautiful lighting effects on the façade and in the garden wherever the variety of possible arrangements is particular important: One power supply, two small floodlights on a single cross beam. These double floodlights feature an adjustable beam direction for situations where illumination from one installation location in different directions is desired. The permanent cross beam with two floodlights is suitable for ceiling or wall mounting.

Page 151

Permanent floodlights

These efficient floodlights are available in symmetrical wide beam or symmetrical very wide beam light distribution and are thus suitable for a variety of lighting applications. These include either more focused lighting with a small half beam angle, that is, wide beam light distribution, or more wide-area lighting with a large half beam angle, i.e. very wide beam light distribution. Islands of light are just as achievable as lighting for building or garden details.

Permanent floodlights

These floodlights with mounting box for permanent installation on walls and ceilings are suitable for the illumination of objects, plants and architectural features in private gardens. On both variants, the adjustable joint offers flexibility in highlighting the illuminated areas. The floodlights are equipped with a BEGA LED module or with E 27 socket including the corresponding BEGA LED lamp. The round luminaires offer directed, wide-area lighting with very wide beam light distribution. The rectangular luminaires are able to illuminate even large areas with a very wide beam thanks to their high output.

BEGA UniLink®

Garden illumination that adapts to your garden.

Garden illumination at a flick of the wrist

Presenting BEGA UniLink®: a new generation of garden lighting. All you need to create impactful and stylish professional-looking lighting in your garden are one available outdoor socket and BEGA UniLink®. Forget costly and work-intensive excavation or complex electrical installations! Fully watertight and safe. Plug in, position the luminaires where you want them – that's it.

A solution that is on a par with any permanently installed, weatherproof professional system. And all that in the BEGA quality and design you have come to expect.

Easy, flexible, versatile

Your garden grows and changes – BEGA UniLink® remains flexible. If your garden needs illumination for a special occasion – for example, an event – BEGA UniLink® offers the flexibility you need. With an impressive level of performance otherwise only seen in permanently installed systems.

When flexibility is key

The sophisticated system of distribution boxes allows the connection of up to five BEGA UniLink® luminaires on a single power supply. Each luminaire can be placed individually in the garden in a 50-metre range. You can add more distribution boxes to connect additional luminaires. This allows you to react to any situation at a flick of the wrist and reposition the luminaires however you like.

BEGA UniLink® puts you in the driver seat:

- **easy control** of all luminaires via a central controller – i.e. a traditional wall switch or a clock timer
- or **individual control** over each of the small-format BEGA UniLink® Play floodlights and garden luminaires – e.g. via the BEGA Smart app

BEGA UniLink®

One system that has it all

Every BEGA UniLink® luminaire is equipped with a five-metre-long connecting cable with a waterproof plug connector. You can connect the individual luminaire to an outdoor socket in no time at all using the matching country-specific mains plug.

Use a five, ten, or twenty metre BEGA UniLink® extension cable for longer distances between the luminaire and socket. These cables allow you to space luminaires with a distance of up to 50 metres throughout the garden.

Requirement: Mains connection

We recommend using the BEGA UniLink® five-way distribution box if you wish to connect multiple luminaires via a single socket.

The distribution box allows the connection of up to five luminaires from the multifaceted UniLink® portfolio. And by using additional five-way distribution boxes, you can easily increase the capacity of the BEGA UniLink® system up to a maximum distance of 50 meters.

Luminaires from the **BEGA UniLink® Play system with 48 volts of operating voltage** can be integrated into any BEGA UniLink® plug connector using the BEGA UniLink® Play power supply unit.

For more information
see next page →

BEGA UniLink® Play

Garden lighting made easy

BEGA UniLink® Play includes small-format floodlights and pathway luminaires – including matching extension leads. A BEGA UniLink® Play power supply unit will be required, which facilitates the safe 48-volt operating voltage. An integration into BEGA Smart using BEGA Smart Link allows individual control and automation of these luminaires. RGBW floodlights create coloured light in the garden and require no additional control components.

BEGA UniLink® Play can extend an existing BEGA UniLink® installation or be used as a stand-alone system.

Requirement: 48 V power supply

BEGA UniLink® Play power supply unit

delivers the required 48 V operating voltage
Multiple single luminaires can be operated using one power supply unit – the total output of the power supply unit must not surpass 100 Watt.

Input: BEGA UniLink® plug connector

Output: BEGA UniLink® Play plug connector

BEGA UniLink®
garden luminaires

Within the adaptive BEGA UniLink® system, these garden luminaires offer a particularly high degree of versatility. It is this versatility that makes these luminaires a great choice for a variety of lighting applications in the garden or patio area.

The luminaire head can be infinitely adjusted in height and tilted by 30° in two directions. This allows the directed light with wide beam light distribution to illuminate each surface according to the situation.

The luminaires offer two placement options. The mobile garden luminaire comes with an earth spike for quick, anytime relocation – for example on the lawn, in flowerbeds or in planters. The patio luminaire is significantly larger than its little sister with the earth spike. It is 1600 mm high and features a luminaire head with a 220 mm diameter – a great size for a base that can be positioned on any paved surface. You can therefore easily include areas without an outdoor socket in your lighting design concept.

Protection class

You will need a mains plug (to be ordered separately) or a free terminal in a BEGA UniLink® distribution box to operate a BEGA UniLink® luminaire. BEGA UniLink® system components are offered on Page 136–137; technical data for each luminaire can be found on our website.

BEGA UniLink®
garden luminaires

These upward shielded garden luminaires are a great addition to the illumination concept for your garden. They emit their light downward and peripherally. Plants or flower beds in the immediate vicinity of the luminaire are illuminated directly from above. The results are islands of light that accentuate specific areas of the garden for eye-catching effect.

These BEGA UniLink® system luminaires are available in two shapes and two heights. The shape of this garden luminaire is reminiscent of a flower, making it an attractive design element that fits right in with the plant theme. The mushroom-shaped luminaire head completely covers the light emission of the luminaire. Only the soft, glare-free light illuminating the surrounding plants can be seen, drawing attention to specific areas of the garden. The luminaires in this model series emit no light into the upper half-space of the luminaire, helping to preserve the darkness of the night sky.

BEGA UniLink® garden luminaires

These three portable earth spike luminaires create a pleasantly warm white light effect with their unshielded light on paths, on terraces and in flowerbeds. Their aesthetic glass bodies made from high-quality three-ply opal glass are attractive design elements in many areas around the house. With the earth spike, the position of the luminaires can be changed very easily depending on the situation and season.

RGBW lamps for coloured light can be found on Page 280.

BEGA UniLink® garden luminaires

The classic spherical shape makes this luminaire a standalone design component of your garden illumination concept. Particularly as a luminaire group with a combination of different sphere sizes, they are impressively eye-catching in private gardens or large garden areas. This unshielded spherical luminaire is available in four sizes.

Each of these durable luminaires comes with a conventional E-27 socket and a stainless steel base plate (a suitable 3000 Kelvin LED lamp is included in the scope of delivery). It remains stable in wind and weather through its own weight, but can still be positioned easily and freely anywhere in the garden. With its unshielded light, atmospheric illumination is ensured at all times in flexible and mobile application.

BEGA UniLink®
portable garden floodlights

The shape of these compact garden floodlights has been an absolute BEGA classic for decades. Much finesse and expertise has gone into updating their technology. These all-rounders among luminaires feature a wide beam or very wide beam light emission.

These compact garden floodlights with wide beam light distribution are highly versatile lighting tools. They can be used for various lighting scenarios in the garden, including the illumination of small trees or groves. The floodlight model with ring base allows for easy repositioning of the luminaire on any paved surface for quick changes in the lighting concept. The cable winder in the ring base is particularly practical, as it hides surplus cable lengths. The earth spike is a great tool for facilitating quick seasonal changes to the lighting design.

BEGA UniLink® portable garden floodlights

Round or rectangular? That is one of the most frequently asked design questions. Here you will find a selection of portable garden floodlights in both shapes. The economical and durable round floodlight with wide beam light distribution comes with an E 27 screw base for LED lamps (a suitable 3000 Kelvin LED lamp is included with the delivery).

The rectangular floodlight with wide beam light distribution emits a uniform warm white light to illuminate plants or architectural details in your garden.

Both versions can be easily positioned in flower beds, lawns, or gravel areas using the earth spike provided.

BEGA UniLink®
portable garden floodlights

A strong lighting trio: This ready-to-connect unit comprises three compact LED floodlights and enables versatile lighting effects around the house or in private gardens. Each of the three floodlights is connected to a shared distribution box via a three-metre-long cable. Combined with a BEGA UniLink® mains plug, the five-metre-long BEGA UniLink® connecting cable can be directly connected with the outdoor socket or simply plugged into a five-way distribution box if there is no mains plug.

The three floodlights can be positioned anywhere in the garden using the earth spike. It's never been this easy to create flexible and memorable lighting scenarios.

β = Half beam angle

BEGA UniLink® on-ground floodlight

With this on-ground floodlight that can be positioned anywhere you like, it is particularly easy to respond to changing seasons, growing plants, or changing usage of the garden.

The floodlight can easily be positioned on any lawn, along footpaths, or on patios, and can be moved at any time. The symmetrical light distribution and warm white light facilitate the creation of virtually endless lighting scenarios. The cable winder in the base of the luminaire housing is especially convenient for any connecting cable length that is not required.

This on-ground floodlight would be a meaningful addition to a system using luminaire models with symmetrical light distribution. It is particularly useful where the areas to be illuminated are not directly above the luminaire.

An asymmetrical light distribution is best suited for walls, privacy screen elements, and architectural details you would like to highlight.

This is a simple way to create an impressive lighting atmosphere in many situations.

The RGBW floodlight can be individually controlled without BEGA Smart Link.

BEGA UniLink® Play garden floodlights

Gardens change with the seasons. BEGA UniLink® Play garden floodlights with earth spike illuminate bushes, shrubs and small trees in the garden. They are easily repositioned to draw the eye to particular features as your garden changes throughout the year. Combined with customisable adjustability, flat beam light distribution or wide beam light distribution and RGBW floodlights give you a variety of options for garden lighting. The removable shields, adjustable by 140°, provide even more targeted lighting for enhanced visual comfort.

These garden luminaires become dimmable by implementing the BEGA UniLink® Play component BEGA Smart Link.

BEGA UniLink® Play
garden and pathway luminaires

Stairs, steps, landings and pathways are an integral component of garden design. BEGA UniLink® Play garden and pathway luminaires are available in two versions and serve as demarcation for footpaths in the garden. The light point for the cylindrical bollard is integrated via an opening in the bollard tube. The resulting bronze look inner surface reflects the emitted light, creating a striking visual accent for the overall appearance of the luminaire and for the directed light. The uni-coloured, rectangular garden and pathway luminaires resolve the same illumination challenges.

They are also portable and can be used in different locations, meaning you can customise your garden design to your individual requirements or for different seasons. As a minimalistic design element, they help people to safely find their way in private gardens.

These garden luminaires become dimmable by implementing the BEGA UniLink® Play component BEGA Smart Link.

Connecting pillars

Connecting pillars with 230V safety sockets make available all the electricity you'll need in the garden. These are available in various versions.

Depending on your needs, they can be equipped with Zigbee wireless technology for control via the BEGA Smart app or BEGA remote controls.

There are various equipment versions to choose from with one or more safety sockets. In addition to your lighting system, the BEGA connecting pillars can power all kinds of electrical equipment in your garden – from the lawn mower to an electric BBQ. Forget trying to route super long extension cables to where you need electricity!

**We offer connecting pillars
with the following options for socket types**

Type F: system most commonly used in Germany and Europe
Type E: system most commonly used in France and Belgium
Type G: system most commonly used in the UK
(Commonwealth plug)

Type F

Type E

Type G

Connecting pillars

These connecting pillars for electrical supply in the garden are available in various versions.

The permanently installed connecting pillar features two or three sockets, while the portable version comes with two sockets on opposite sides of the pillar.

The permanently installed connecting pillars come optionally with an anchorage unit or a screw-on base made of hot-dip galvanised steel for mounting on a foundation.

The portable connecting pillar comes with an earth spike for perfect placement flexibility anywhere in the garden.

BEGA indoor luminaires

Our indoor luminaires are part of the architecture and in tune with the interior design. As professional lighting tools, they ensure excellent illumination of indoor spaces. The following indoor luminaires from "Light for the house and the garden" are no exception. They offer a wide

range of design options for harmonising the lighting of indoor and outdoor spaces and experiencing lighting like never before. Our understanding of quality is reflected in impressive and long-lasting lighting technology, premium finishes and unique design. These characteristics

are not just expressions of good taste and a sign of appreciation – they represent the care with which we use raw materials. The BEGA indoor luminaire collection offers a range of long-life luminaires that fulfil highest quality requirements. The STUDIO LINE series consists

of distinctive and expressive luminaires that create a pleasant and sophisticated light ambiance. For installation in suspended ceilings in cut-outs with a diameter of 68 mm, or for in-wall installation in commercial cavity boxes, the efficient ACCENTA luminaire series is the ideal solution.

Recessed ceiling luminaires

Recessed ceiling luminaires are ideal lighting tools for a variety of interior design applications. They are suitable for general lighting as well as for accent lighting. As downlights, their light distribution ranges from symmetrical very wide beam – for excellent illumination of the area under the luminaires with large distances between the light points – to symmetrical narrow beam versions. The latter is a great choice for the lighting up work surfaces in the kitchen or narrow floor surfaces like corridors, hallways and staircases.

Different types of material

Thanks to different types of material, these luminaires can be adapted optimally to suit the interior. The recessed luminaires in the STUDIO LINE series furthermore feature a fascinating combination of high-contrast metal finishes.

We define **installation depth** as the housing height of a recessed luminaire including cable guide (if any). Please note that the exact installation dimensions depend on the size of the luminaire, external power supply units and the thickness of the suspended ceiling as provided in the instructions for use of the luminaire. We recommend considering this aspect in your lighting design planning.

ACCENTA PURE

ACCENTA VARIO

ACCENTA

Recessed ceiling luminaires

The compact ACCENTA recessed ceiling luminaires feature long-lasting LED technology. With a choice between a minimalistic crystal glass look or flexibly adjustable light globes, they combine aesthetics and function and can be ideally integrated into various room concepts.

ACCENTA PURE has a charmingly minimalistic look in which only the crystal glass is visible. The partially frosted glass distributes the light uniformly and gives the luminaire simple elegance and brilliance. The recessed opening is 68 millimetres.

Recessed ceiling luminaires · Downlights

These luminaires feature a very wide range of lighting options.

The rotationally symmetrical light distribution is comparable to the light cone of a floodlight and is available with three different light characteristics.

For the illumination of narrow floor areas like corridors, hallways or staircases, the luminaires are available with a symmetrical narrow beam light distribution – on the other hand, symmetrical wide beam and very wide beam light distributions are suited for general illumination of spaces. Luminaires with asymmetrical light distribution are used to illuminate wall surfaces.

The half beam angle describes the size of the light cone with which an object or surface is actually illuminated. Luminaires with wider half beam angles should be chosen for short lighting distances, a focused light is recommended for larger distances.

On/off power supply units (switchable) or DALI power supply units (controllable/dimmable) are optionally available as accessories to be ordered separately.

Recessed ceiling luminaires

The next-generation glare suppression technology used in the recessed ceiling luminaire shown here offers exceptional visual comfort and sets new illumination standards.

The sophisticated conical mesh texture ensures lateral glare suppression even at near level view angles. Lit or unlit – this luminaire shines with its beauty and technical quality. It offers wide beam light distribution.

The available interior colours are velvet black, velvet brass and velvet copper, for combinations with a white or black exterior finish. This luminaire combines technical excellence and aesthetics that will upgrade any space with its remarkable presence.

The glare-free light of this luminaire makes it a perfect choice for any space requiring an inviting and stylish ambience. Its understated design details will be a great match for modern or minimalist interior styles.

STUDIO LINE

Recessed ceiling luminaires

Recessed ceiling luminaires with wide beam light distribution for installation in suspended ceilings. The luminaires are available with different coloured interior surfaces and in two exterior colours. Part of the light from the luminaire is directed straight downwards. The remaining luminous energy is reflected by the coloured inner surface and creates a delicately coloured light in the case of metallic versions, or a brilliant, bright light in the version with white interior surface.

Ceiling luminaires

Ceiling luminaires can be used in many locations within a building. Arranged in a linear fashion they can be used to illuminate corridors, and evenly distributed on the ceiling they provide larger rooms with general lighting.

Colour nuances of the light

Luminaires with downward-directed light illuminate work areas — for example, in kitchens. The luminaires are available in different materials to ensure optimum adaptation to the ambience of the interior. Depending on the metallic interior finish, the luminaires produce nuanced light colours typical of the STUDIO LINE series.

Low installation costs

The work involved in installing ceiling luminaires is significantly less than for recessed ceiling luminaires. Determining the number and location of the light points on plastered ceilings or suspended ceilings can still be done effortlessly after the shell construction phase.

Ceiling luminaires

Discover a series of efficient ceiling luminaires that sets standards when it comes to cost-effective and compact operation. A variety of half beam angles are available in two outputs each – with both symmetrical narrow beam and symmetrical wide beam light distribution. The half beam angle describes the size of the light cone with which an object or surface is actually illuminated. Luminaires with wider half beam angles should be chosen for short lighting distances, a focused light is recommended for larger distances.

The high protection class (VDE 0100-compliant) makes these luminaires perfect for use in wet rooms, e.g. bathrooms, where this type of protection type is a requirement.

Ceiling luminaires

These efficient ceiling luminaires combine modern design with extraordinary light effect and create an appealing ambiance. Their wide beam light distribution ensures uniform illumination of the room.

The partially frosted crystal glass creates an impressive effect when lit by gently diffusing the light and generating particular reflections. In daylight, the luminaires are a subtle velvet white colour and blend harmoniously in a bright ceiling.

These luminaires combine technical functionality and aesthetic standards of the highest level.

Ceiling luminaires

With its advanced glare control technology, this ceiling luminaire offers exceptional visual comfort and sets optical standards in the lighting sector. Its sophisticated conical mesh structure ensures that there is no glare at the sides and provides glare-free light even at shallow viewing angles. Whether switched on or off: In addition to its aesthetic appearance, this luminaire impresses above all with its technical and visual quality.

The luminaires are available with wide beam light distribution. They are available in the interior colours velvet black, velvet brass and velvet copper, while the exterior colours are available in velvet white and velvet black. With its glare-reducing mesh structure, it blends seamlessly into different room concepts.

Thanks to its glare-free illumination, the luminaire is ideal for use in rooms where an inviting, stylish atmosphere is desired. It is particularly effective in modern or minimalist interiors and enhances the room with its filigree details.

STUDIO LINE

Ceiling luminaires

Two spherical ceiling luminaires: The luminaires with asymmetrical light distribution can be rotated around the vertical luminaire axis. They are primarily used to illuminate or accentuate wall surfaces.

A reflector directs the light downwards from the symmetrical luminaires. The light is shielded as it is emitted into the room and onto the illuminated surface.

Both types of luminaire offer the choice of three metallic interior finishes, providing an additional coloured reflective element.

This reflects the light with a soft colouration and creates a pleasant yet impressive lighting atmosphere.

STUDIO LINE

Ceiling luminaires

Due to the slightly protruding, convex synthetic cover, these ceiling luminaires also distribute their light into the room from both sides as well as downwards. The result is a more uniform and softer light around the luminaire. When unlit, the inside colours brass and copper make a particularly pleasant contrast with the translucent lamp cover.

Ceiling and wall luminaires

The soft light of these ceiling and wall luminaires is generated by three-ply opal glass. The luminaires offer an elegant combination of aesthetics and functionality, whereby the light is distributed softly and uniformly in the room. The high light output brings lots of unshielded light into the room, offering excellent illumination and creating soft shadows.

Ceiling and wall luminaires

In addition to the impressive material quality and lighting effect, these luminaires are characterised by their elegant design. The harmonious combination of precise workmanship and sophisticated design, which enables uniform and glare-free illumination, should be emphasised. The high-quality production guarantees both functionality and an aesthetic appearance. Thanks to the high IP 64 protection rating, these luminaires are also ideal for use in bathrooms.

Ceiling luminaires

By day, they are sculptural design details on the ceiling – and delicate light sources by night. Ring luminaires provide impressive illumination for your installation surfaces. The rings, supported by a coloured cylinder with velvet white or velvet black inlay, seem to float in mid-air. Their diffuse light creates this unique effect. It is reflected by the mounting surface and emitted into the room. Arranged in groups or rows, these ring luminaires add an exclusive flair to the room.

Recessed wall luminaires ACCENTA

In combination with the general lighting, these recessed wall luminaires set lighting accents and structure the room. They help with orientation along corridors, near steps and staircases, and create light graphics on the wall when arranged in groups. Although their planning requires a little more effort, their light effect is all the more impressive. Particularly in areas with low ambient brightness, their light increases the visibility of hazard points. The height at which they can be installed is by no means limited to floor level.

Carefully planned building detail

Recessed wall luminaires are structural details that will be a permanent fixture in the building for years to come. The luminaire bodies are recessed into the wall.

Careful planning is required for their installation as early as the construction phase. Defining the number and location of light points is just as important as ensuring that suitable device boxes are installed.

Quality that pays off

The use of high-quality products with a guaranteed availability of replacement parts minimises the risk of subsequent modification or even replacement of products, which can be very costly and time-consuming.

ACCENTA recessed wall luminaires are specially designed for installation in standard device boxes with a diameter of 68 millimetres and an installation depth of 60 millimetres. As a result, they can be integrated into conventional wall installations without a problem and offer a flexible solution for your lighting requirements. To make installation even easier, a matching cavity box is supplied along with every luminaire.

Recessed wall luminaires

A series of small and compact recessed wall luminaires with high-grade LED technology.

These luminaires are quick and easy to install in standard device boxes with a diameter of 68 millimetres and a depth of at least 65 millimetres. The luminaires with shielded light for the illumination of ground surfaces can be used, for example, to mark stairs and danger points. Recessed wall luminaires with unshielded light offer a guiding and directing illumination.

Unshielded wall luminaires

Wall luminaires provide structure and accentuate wall surfaces. They can be arranged individually, in rows or in groups. Unlike in shielded wall luminaires, the luminaire body of unshielded wall luminaires has an even more striking effect. The immediate surroundings are very well illuminated.

Optimal visual comfort

Unshielded luminaires made of opal glass or translucent white plastic offer impressive visual comfort. They ensure soft, pleasant light distribution.

Additional unshielded luminaires which can be mounted on the wall or on the ceiling can be found on Pages 198 to 201.

Wall luminaires · Light Brick – Lichtbaustein® · Pebbles

Unshielded light

Our glass reaches a temperature of over 1300 degrees Celsius during processing. Our glassmakers install a translucent layer of opal glass between two layers of crystal glass. During that time, the glass flows like honey. We wanted to give this valuable glass mass a new, more glass-like form – and got our inspiration from pebbles on the beach.

Their soft, flowing and almost random shapes are very similar to those of glass during the melting process.

The luminaire glass moves freely on the fittings. That is how just two shapes in two sizes allow the creation of endless arrangements – reminiscent of the random, natural interplay of pebbles on the beach. And made far more beautiful with light.

Wall luminaires

These ring luminaires are sculptural design objects on walls by day – and delicate light sources by night. They strikingly illuminate their mounting surfaces with their coloured inlays. Held by a coloured cylinder, the seemingly weightless rings emit their diffused light into the room, which is also reflected by the installation surface. Arranged in groups or rows, they add an exclusive touch to their surroundings.

In addition to the luminaire, a convex shield can also be mounted on the wall. The ring luminaire becomes a decorative wall object – transparency becomes presence.

Wall luminaires in asymmetrical double arrangement and symmetrical triple arrangement can be found on Page 217 .

Wall luminaires

Luminaires always act as design elements as well, here in the form of ring luminaires – either as a discreet light source or as a wall sculpture when unlit. In an asymmetrical double arrangement or symmetrical triple arrangement, delicate luminaire rings rise up from a wall-mounted cylinder. Depending on the choice of colour, the inlays in the rings and cylinder create a marked contrast with the wall. They look particularly appealing when arranged in groups or rows.

Single wall luminaires can be found on Page 215.

Shielded wall luminaires

Wall luminaires are used to add texture and accents to wall surfaces. They can be arranged individually, in rows or in groups. When it comes to wall luminaires with shielded light, the desired light effect plays a decisive role.

Accentuate installation surfaces

Luminaires with shielded light to the front are available with light emission on one side, mostly directed downward, or on two sides. They accentuate the installation surface and its structure while also – depending on the design and installation – illuminating the surfaces where the light is emitted.

Individually or in groups

Shielded wall luminaires are frequently used individually or in groups in staircases, passageways and corridors. When arranged in groups and rows, they offer a variety of options for decorating the wall with light. The installation height can vary considerably. Luminaires with a low installation depth, whose light is directed downwards, are the preferred solution near footfall areas like steps.

Luminaires with light emission on two sides are generally installed at head height. This automatically draws the eye to the light graphic.

Wall luminaires

These wall luminaires combine efficient wall illumination with fascinating light displays. Their shielded light delivers intense, uniform illumination of the wall both upwards and downwards, perfectly highlighting the room. At the same time, the precise edges of the crystal glass with white interior generate special light effects that lend an additional aesthetic dimension to the installation surface.

The luminaires come in a choice of finishes: white and palladium.

STUDIO LINE

Wall luminaires

These geometrically defined wall luminaires distribute their light both upwards and downwards. The light sources are placed almost invisibly on the inside of the luminaire housing. The light is therefore directed onto the mounting surface without any glare whatsoever. Thanks to the open design, the metallic colours on the inside of the luminaires are impressively accentuated and underline the characteristic beauty of the luminaires.

Pendant luminaires

Pendant luminaires can enhance a space visually, and create an attractive ambience. Their particular type of installation ensures a commanding presence in the room – with a light effect similar to that of ceiling luminaires, but with a more eye-catching result.

Key aspect: the shape

BEGA pendant luminaires contribute to accent lighting in a variety of ways. The eye is drawn to the illuminated space, but also to the actual luminaires.

Interior design flexibility

Thanks to the option of height adjustment and the variety of shapes and materials, pendant luminaires adapt perfectly to different room concepts. They offer focused light guidance that clearly structures the space and generates a special atmosphere, regardless of the material chosen.

Efficiency meets aesthetics

Thanks to modern technologies like energy-efficient LED modules, pendant luminaires offer not only aesthetic advantages but also a sustainable illumination solution. This makes them an essential element in modern interiors.

Pendant luminaires

The light of these beautifully shaped pendant luminaire downlights with wide beam light distribution is additionally enhanced by a reflector. As a result, the surface to be illuminated receives a high degree of illuminance.

These luminaires are characterised by the thick-walled, hand-blown, partially frosted crystal glass that creates a gorgeous and multi-faceted light.

These luminaires are available in white.

Pendant luminaires

Luminous rings that seemingly hover in mid-air. That is all down to LED technology.

These pendant luminaires feature intricate light solutions for entirely new perspectives in illumination. Delicate rings of light with a flat cylinder – in velvet white or velvet black – with a coloured inlay: artfully designed pendant luminaires during the day – slender and graceful room lighting after dark. Arranged in groups, these luminaires create an air of extravagance and ethereal beauty.

BEGA system pendant luminaires

As part of a modular system, BEGA system pendant luminaires can be combined with a variety of installation components.

The electrical connection and suspension of a pendant luminaire on the ceiling are usually done under a canopy. This canopy acts as a protective device to prevent contact with electrical cables, and also hides the inner workings of the luminaire.

Flexibility for ceiling installations

Depending on architectural conditions, pendant luminaires may have to be installed in a variety of ceiling structures. The electrical connection and the luminaire suspension may have to be integrated into a suspended ceiling.

Additional applications for pendant luminaires include slanted ceilings in pitched roofs as well as track systems.

Creating your bespoke system

With BEGA system pendant luminaires, you simply order the appropriate installation components for your desired type of installation.

Make sure to read the technical data of the system pendant luminaires and installation components during the planning phase of your system. All relevant instructions for use can be found on our website.

Installation components

Type A

Surface-mounted canopy

For the mounting and electrical installation of a BEGA system pendant luminaire on straight ceilings of all types.

Type B

Surface-mounted canopy

For the mounting and electrical installation of BEGA system pendant luminaires on all types of slanted and level ceilings. Suitable for slanted ceilings with a pitch of 0°–40°.

Type C

Recessed canopy

For the mounting and electrical installation of a BEGA system pendant luminaire in sloped and straight suspended ceilings. Suitable for slanted ceilings with a pitch of 0°–40°.

Type D

Track adapter

for the integration of a BEGA system pendant luminaire in surface mounted and recessed Eurostandard-Plus® track systems.

Type AS

Surface-mounted canopy Smart

Identical in design to Type A, but with built-in Smart DALI Controller for wireless control of the luminaire using BEGA Smart.

Type BS

Surface-mounted canopy · Smart

Identical in design to Type B, but with built-in Smart DALI Controller for wireless control of the luminaire using BEGA Smart.

Type CS

Recessed canopy · Smart

Identical in design to Type C, but with built-in Smart DALI Controller for wireless control of the luminaire using BEGA Smart.

Type AS · BS · CS

works with
BEGA Smart

Select the appropriate canopy for each individual system pendant luminaire to match the existing installation situation: bega.com/system-pendants

BEGA system pendant luminaires

We developed a special combination of LED module and opal glass for these LED system pendant luminaires, creating a luminaire glass with two light intensities. It is what we call DUOLOGIC technology.

The maximum luminous intensity of the LED is directed downward through the glass directly onto the surface to be illuminated for highest illuminance. The entire glass is lit with eye-friendly, glare-free light intensity.

Each system pendant luminaire will require its specific installation component depending on the installation situation. By using a smart canopy, the luminaires can be integrated into BEGA Smart and controlled wirelessly. You can find suitable installation components from the article numbers of the system pendant luminaires on our website.

STUDIO LINE

BEGA system pendant luminaires

These shielded, cylindrical system pendant luminaires emit their light in a wide beam. The resulting illumination is gentle and inviting. Luminaires of the STUDIO LINE series come with a variety of inside colours to choose from. Part of the light is directed straight downwards. The remaining luminous energy is reflected by the metallic interior, producing a light that is softly coloured by the selected metallic finish.

Each system pendant luminaire will require its specific installation component depending on the installation situation. By using a smart canopy, the luminaires can be integrated into BEGA Smart and controlled wirelessly. You can find suitable installation components from the article numbers of the system pendant luminaires on our website.

STUDIO LINE

BEGA system pendant luminaires

The downward directed light of these system pendant luminaires is shielded outward by a cylindrical luminaire housing. Part of the light is emitted upward into the upper half-space of the luminaire, perfectly staging the shape of the luminaire, while also underlining the interplay of finishes.

Each system pendant luminaire will require its specific installation component depending on the installation situation. By using a smart canopy, the luminaires can be integrated into BEGA Smart and controlled wirelessly. You can find suitable installation components from the article numbers of the system pendant luminaires on our website.

BEGA system pendant luminaires

Our cylindrical system pendant luminaires with glass shade are the ideal choice for stylish ambient lighting in private interiors. Their linear design ensures a clear, modern aesthetic, while their partially lacquered glass creates glare-free light and a pleasant lighting atmosphere.

The inner cylinder is available in four colour tones and can be integrated effortlessly into various interiors.

The semi-transparent glass cylinder gives each room an elegant and timeless touch.

Each system pendant luminaire will require its specific installation component depending on the installation situation.

By using a smart canopy, the luminaires can be integrated into BEGA Smart and controlled wirelessly. You can find suitable installation components from the article numbers of the system pendant luminaires on our website.

STUDIO LINE

BEGA system pendant luminaires

The light of the spherical system pendant luminaires is bundled using a reflector, and then emitted directly downward into the room. These luminaires feature a soft, harmonious shape that blends seamlessly into various room concepts.

The efficient luminaires from the STUDIO LINE series are available in various inner colours. A portion of the light emits directly downward, while the remaining luminous energy is reflected onto the metallic interior surface. This reflected light remnant produces a gentle matching colour depending on the finish selected.

Each system pendant luminaire will require its specific installation component depending on the installation situation. By using a smart canopy, the luminaires can be integrated into BEGA Smart and controlled wirelessly. You will find the right installation components from the article numbers of the system pendant luminaires on our website.

STUDIO LINE

BEGA system pendant luminaires

The light of the cylindrical system pendant luminaires is bundled using a reflector, and then precisely emitted directly downward into the room. Their clear, modern design makes them particularly suited for streamlined, geometrically inspired design.

Like all luminaires in the STUDIO LINE series, the cylindrical models also allow for the option to choose between different inner colours. The direct portion of the light emits directly downward, while the remaining luminous energy is reflected onto the metallic interior surface and produces a gentle light mood depending on the colour.

Each system pendant luminaire will require its specific installation component depending on the installation situation. By using a smart canopy, the luminaires can be integrated into BEGA Smart and controlled wirelessly. You will find the right installation components from the article numbers of the system pendant luminaires on our website.

STUDIO LINE

BEGA system pendant luminaires

Pendant luminaires define the light ambiance in the room: In this model series, the two-sided light emission additionally brightens the ceiling. The resulting indirect, yet uniform illumination is particularly gentle on the human eye. When illuminated, the metallic interiors create a beautiful contrast to the exterior finish. Choose a colour combination for your luminaires to perfectly complement your interior theme.

Each system pendant luminaire will require its specific installation component depending on the installation situation. By using a smart canopy, the luminaires can be integrated into BEGA Smart and controlled wirelessly. You can find suitable installation components from the article numbers of the system pendant luminaires on our website.

STUDIO LINE

BEGA system pendant luminaires

Luminaires of the STUDIO LINE series are characterised by the contrast between their outer finish and metallic inside colour, which is a particularly prominent feature of these pendant luminaires. The metallic luminaire housing shields the downward directed light. Part of the light is emitted upward, highlighting the shape of the luminaire and additionally emphasising the interplay of the surfaces.

Choose your favourite among four colour combinations in various sizes and with differing light outputs to match your interior theme.

Each system pendant luminaire will require its specific installation component depending on the installation situation. By using a smart canopy, the luminaires can be integrated into BEGA Smart and controlled wirelessly. You can find suitable installation components from the article numbers of the system pendant luminaires on our website.

Select the appropriate canopy for each individual system pendant luminaire to match the existing installation situation: [bega.com/system-pendants](https://www.bega.com/system-pendants)

Table lamps and floor lamps

Table lamps help create light accents in a room. Unlike a more wide-area, practical illumination, they create islands of light to accent particular areas of the interior. In their shielded variety, they create attractive illumination in the immediate vicinity of the luminaire.

Floor lamps will also create a cosy lighting atmosphere. Due to the elevated light point, a larger area on the floor or in the vicinity of the luminaire will be illuminated. All in all, they are a perfect solution for an attractive and relaxing reading environment.

Table lamps

The unshielded table lamps shown here are available in the three colours velvet black, velvet blue and velvet green. The dark lamp base with the colour-matched top creates an attractive contrast to the white translucent synthetic cover. The cover features a flattened spherical shape and is held at the top by an inverted cone.

When lit, the table lamp is transformed into a fascinating light object that adds an aesthetic highlight to any space. This luminaire emits gentle, warm light with an LED colour temperature of 3000 Kelvin. The integrated touch dimmer on the back of the luminaire permits easy and convenient adjustment of the light intensity.

The smart version can be switched and controlled directly via the BEGA Smart app.

STUDIO LINE

Table lamps

A table lamp with a wide range of applications. The spherical luminaire sits unmounted on the wooden base and can be positioned in different ways. They open up a wide range of lighting options. Wall and ceiling surfaces can be highlighted just as effectively as pictures or objects.

These dimmable luminaires are part of the STUDIO LINE luminaire series and boast a fascinating interplay of the different metal finishes. When illuminated, the metallic inside colours reveal their discreet yet impressive effect. Choose from two sizes, six colour combinations and three base colours to match the luminaires to your interior theme.

STUDIO LINE

Floor lamps

These floor lamps in two sizes with light emission on two sides offer many options for attractive lighting and interior design concepts with a particularly unique note.

The floor lamps feature a touch dimmer and are available in a choice of two interior colours. That makes them optimally suited to match any interior or to complement other luminaires of the STUDIO LINE series.
