

Light for the house and the garden 2025

We would also be pleased to send you our catalog "Light for the house and the garden 2025". It presents a selection of luminaires from our complete range, which are particularly suitable for the illumination and design of private outdoor and indoor areas. Separate brochures can be ordered on the Internet at: www.bega.com

Complete Product Range 2025

This complete product range offers an overview of all BEGA products for outdoors and indoors, and provides fast information about all new products and the most important data.

Products no longer included in the catalogues are marked with a black dot (•) before the article number – products that are new to the range are marked with a green dot (•).

The data provided in the tables may change as a result of technical progress. All current values and additional technical data can be found on the website as part of the product data sheets.

There you will also find instructions for use, lighting data, sample quotations and application examples.

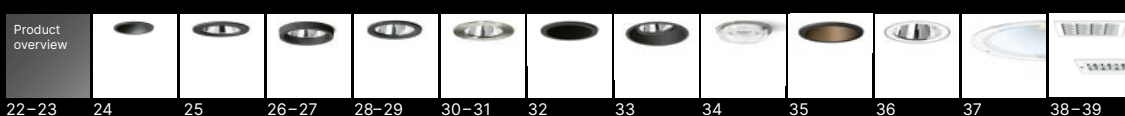

This complete product range is intended for commercial resellers and not for end users.

All goods, services and quotes supplied and/or submitted by BEGA to companies are solely subject to our terms of delivery, which can be accessed at www.bega.de/en/service/terms-of-delivery.

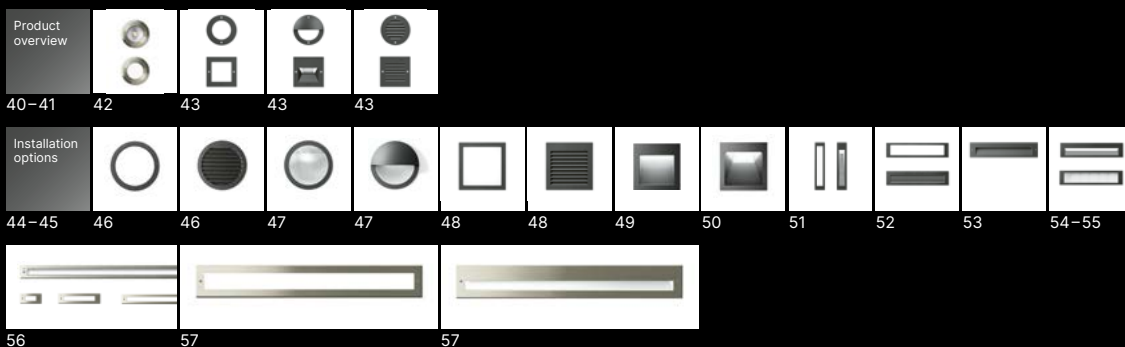

This edition supersedes all previous editions of this document.

About us and our products

BEGA is a global leader and innovator in the sector for sophisticated architectural lighting. We have been developing and producing high-quality luminaires for virtually all areas of interior and exterior design for more than 80 years – with a clear focus on sustainability.

Sustainable by Design

“Sustainable by Design” describes our holistic approach in which sustainability is integrated into the development and design process from the very beginning. We design luminaires that meet the highest aesthetic requirements while conserving resources and operating reliably for decades.

We think of sustainability as the responsible use of environmentally friendly materials in all aspects of what we do.

All production is done at our own factories in Germany, Belgium, France, and the US – with the very best components that ensure extraordinary durability. Our 20-year availability guarantee for luminaire components enables use over generations and underlines our commitment to quality and sustainability.

LED technology offers us inexhaustible design freedom.

Our own premium standard module production has afforded us maximum independence. As structural details, our luminaires are closely bound to architecture and serve as professional lighting tools for precise and sustainable indoor and outdoor illumination.

Alongside high-quality luminaires, we offer versatile furniture solutions for public areas. The Modular Furniture System enables freely configurable urban furniture that can be individually designed with tables, benches and planter modules.

In semi-public spaces, such as restaurants and leisure centres, our Outdoor Furniture line helps to structurally divide and enhance the atmosphere of areas using functional and aesthetic design.

BEGA Continued Life Program

BEGA luminaires are designed for decades of use and can be further optimised through strategic technical modernisation.

Our Continued Life Program enables efficient retrofitting of existing luminaires to adjust them to current requirements for energy efficiency and light quality. Instead of purchasing entirely new luminaires, the

existing light infrastructure is maintained and enhanced with modern LED components. Apart from the technical equipment, there is also an option of professionally reconditioning luminaires for long-term quality in both look and function.

bega.com/clp

Convenient upgrade

The conversion to energy-efficient LED technology can be carried out directly on site. Exact conversion kits allow easy modernisation of existing luminaires with standard tools – quickly and without requiring much effort.

Technical conversion and reconditioning of surfaces

Apart from modernisation of lighting technology, we also offer professional reconditioning of luminaires. In the process, technical components are replaced while the housing and surfaces are repaired, ensuring a look and performance at the level of a new product, including renewed warranty.

Material quality without compromises

Durability starts with selecting the right materials. BEGA relies on materials that can withstand extreme conditions, retaining their function and aesthetics for decades. Metals play a crucial role here:

Aluminium is highly resistant to corrosion, with low density and excellent heat conductivity, making it an ideal material for efficient thermo-management in our luminaires.

Cast aluminium enables precise shaping, high mechanical durability and excellent dimensional accuracy.

Stainless steel offers extraordinary stability and resistance to environmental influences for use in challenging environments.

Other materials such as **cast zinc, cast bronze, copper, brass and lead-free cast brass** are also used in our products.

We use additive manufacturing to ensure the resource-efficient implementation of precise designs. Our intensive material research delivers the optimal solution for every application. We strategically combine, glass, BEGA NeoGlass®, wood and synthetic material from additive manufacturing.

In this way, we bring together function and high-quality aesthetics.

Each material is carefully inspected and enhanced to ensure maximum resistance against environmental influences, mechanical loads and ageing. At the same time, we optimise our production processes to use resources efficiently and create sustainable products for lasting quality.

Glass

for sophisticated architecture

Glass is one of the oldest materials and combines a shiny aesthetic with cool practicality. It awards our products an elegant touch and sets standards in process quality as well as light deflection. Our glass covers and optical systems deliver excellent lighting results and permanent quality, for use in sophisticated architecture.

BEGA NeoGlass®

The perfect addition to glass and silicone

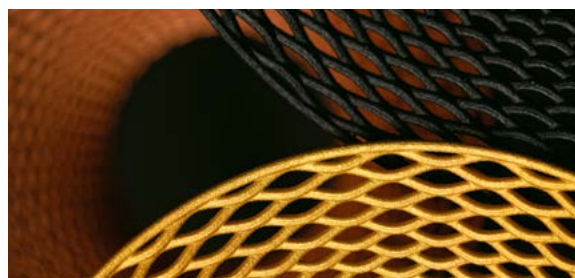

BEGA NeoGlass® is the highly efficient supplement to materials such as glass or silicone and is used particularly for exceptional optical systems and highly reliable luminaire covers. The choice between glass, the variants of BEGA NeoGlass® or silicone depends on the technical lighting requirements and the specific environmental conditions.

Wood

durable and stylishly sustainable

Our wood components are monitored regularly for quality and sustainability in accordance with the requirements of the FSC standards. The methods used for upgrading equip the pine wood components with characteristics that are otherwise only typical of tropical woods and hardwood.

Synthetic material from additive manufacturing

versatile high-tech polymers

In some specific areas of application, synthetic material is superior to other materials in terms of energy balance and application efficiency. Our products made of thermoplastic material feature consistent performance as well as high impact resistance and elasticity.

Our surface technologies with outstanding durability

BEGA luminaires are intended to blend in harmoniously as architectural details and to perform their tasks for many years. As part of our commitment to sustainability, we pay special attention to efficient surface protection for our luminaires. Resistance to corrosion and weathering as well as light stability are a high priority for us, in part due to the enormous variety of weather conditions worldwide.

BEGA Coating Technology® combines two technologies for the efficient protection of metallic surfaces. Thanks to this method, we achieve the highest quality of surface protection. The data sheets on our website provide information about the version of BEGA Coating Technology®.

BEGA Unidure®

BEGA Unidure® is our technology which we use in order to meet the highest demands in terms of weather resistance and light stability.

This extremely weather-resistant powder coating achieves outstanding results in the most extreme endurance tests for worldwide use under particularly challenging climatic conditions. These include continuous sunlight, extremely high temperatures and high humidity.

BEGA Tricoat®

We achieve the best possible surface protection and optimal corrosion resistance with our BEGA Tricoat®. This is ensured thanks to carefully coordinated inorganic and organic coating processes applied to extremely resistant alloys.

Our technologies for protective thermal management and optimal component protection

Electronic components can be very temperature-sensitive, yet are often exposed to high temperatures inside a luminaire. Adverse ambient temperatures also place added strain on power supply units and modules in many places. This can lead to malfunctions and damage to the components.

BEGA Thermal Management® and BEGA Ultimate Driver® guarantee optimal thermal protection and power supply units of the highest quality.

BEGA Thermal Management®

BEGA Thermal Management® comprises two protection levels: BEGA Thermal Switch® and BEGA Thermal Control®. The protective device installed in each case depends on the luminaire type and its primary use. The data sheets for the luminaires on our website provide information about the version of BEGA Thermal Management®.

BEGA Thermal Switch®

Luminaires with the BEGA Thermal Switch® have a thermal cut-off that protects temperature-sensitive components by switching them off temporarily to prevent the luminaire from overheating in high ambient temperatures.

BEGA Thermal Control®

Luminaires with BEGA Thermal Control® come equipped with thermal regulation which temporarily controls the luminaire output for temperature-sensitive components or takes measures to regulate the temperature inside the luminaire to therefore protect the luminaire from overheating due to excessive ambient temperatures. The luminaires are not switched off and continue to operate thanks to BEGA Thermal Control®.

BEGA Ultimate Driver®

BEGA Ultimate Driver® is a power supply unit developed to meet the highest BEGA quality standards. It is characterised by numerous unique features.

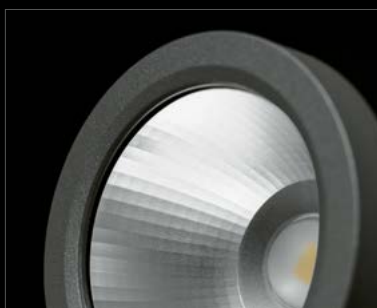

These include: optimum regulation thanks to BEGA Thermal Management®, impressive service life, high dielectric strength and maximum durability. Highly robust design, efficient overvoltage protection and low inrush current round off the advantages of this technology.

Our optical systems of the highest lighting quality

The longevity of BEGA products, premium quality and our utmost sense of responsibility define our guiding principles. Accordingly, the consistent use of the highest quality components forms part of our philosophy of sustainability. By perfectly coordinating our LED modules with light-directing systems, we have maximally optimised the efficiency of our luminaires. We rely on technologies that guarantee durable, practically wear-free optical systems of the highest technical quality.

BEGA Constant Optics®

The efficient optical system

The name itself makes it clear: BEGA Constant Optics® is nearly wear-free. This is guaranteed by the use of age-resistant materials like glass, pure aluminium and silicone in these products. They show no effects of ageing, even under extreme conditions like high temperatures and UV radiation.

BEGA Vortex Optics®

Perfect light deflection

BEGA Vortex Optics® features specially developed twisted reflectors with a pure aluminium finish. The more intensive bundling of light ensures perfect light control. The result is optimised light distribution without artefacts. Thanks to excellent glare control, BEGA Vortex Optics® achieve excellent visual comfort.

Our LED technology with a 20-year availability guarantee

Decades of experience have taught us the quality that is demanded of luminaires. This knowledge has allowed us to consistently improve our products across the board.

When processing and selecting our LED components, we consistently adhere our own ideas and are not guided by standard market criteria. We have established all the necessary conditions for this – in particular, state-of-the-art manufacturing processes at our own facilities.

That is why all BEGA LED luminaires come with tailor-made modules from our own production.

We have full control over all materials used and never have to compromise. We determine all important factors like light output, light colour, and the thermo-management of a luminaire ourselves, which allows us to impact directly on its quality. We consistently use high-end and durable materials like glass, BEGA NeoGlass®, silicone and aluminium to ensure the highest possible ageing resistance for the entire optical system.

We guarantee the availability of replacement modules as much as 20 years after an LED luminaire is purchased from us.

The technology and design of the components may have changed by then. But our customers can rest assured that the light colour and output of the replacements will match the LED modules originally installed.

The design of our LED luminaires allows for an easy replacement of these components on site with standard tools.

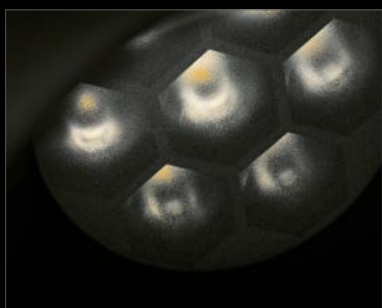

The reliable and economical further use of your LED luminaires is thus assured.

BEGA Hybrid Optics®

The perfect match

BEGA utilises BEGA Hybrid Optics® technology to maximise the efficiency of technical indoor and outdoor luminaires. What makes this system unique is the perfect interplay of precisely dimensioned reflectors with a pure aluminium finish and lenses made of ultra-clear silicone or BEGA NeoGlass®. In these luminaires, virtually every beam of light emitted by the LED modules is captured, directed and used for optimal light distribution. That is the biggest difference between hybrid optics and conventional light deflection methods, in which much of the light leaves the luminaire without being deflected.

BEGA Ultradark Optics®

For optimal visual comfort

We have developed this technology especially for situations that demand luminaires with the lowest stray light percentage as possible. BEGA Ultradark Optics® features a combination of special optical lens made of BEGA NeoGlass®, inside louvres and an ultra black nano coating inside the luminaire to minimise the diffuse light percentage of the luminaires and ensures highly efficient, glare-free visual comfort.

BEGA Zoom optics

For individual lighting requirements

This optical system is infinitely adjustable and can be adapted flexible to different requirements. The half beam angles can be varied from narrow beam to very wide beam depending on the customer's requirements, ensuring an optimal light distribution. Convenient adjustment is also possible after installation when switched on, which makes fine-tuning considerably easier. In addition, optionally available diffuser lenses allow for various light distributions to fulfil specific lighting requirements even more precisely.

Responsible outdoor lighting
Environmentally friendly light

Natural light sources such as the sun and the moon influence the biological activity of plants and microorganisms. They also affect the instincts of humans and animals. Moonlight helps animals navigate in the dark. This is particularly true for the group of animals with the most different species: insects. Other influencing factors include changes between light and dark, the light incidence direction and the rhythm of light in the form of the duration of daily light use.

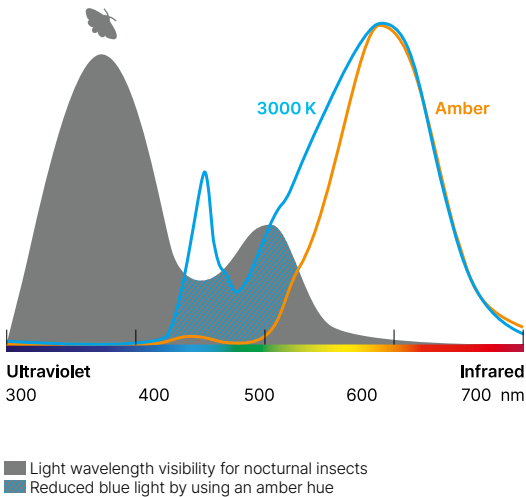

The influence of blue light component on insects and humans

Artificial light – and particularly light with a high blue light content – is attractive to animal life, and specifically insects and birds. It can severely disrupt life's natural rhythms. The consequences can be far-reaching: Impairment of reproductive and foraging activities and even the death of animals in the vicinity of artificial light sources. Light should not be a disruptive factor to the natural balance: instead, it should minimise negative influences on the ecosystem as a whole.

Our focus is on responsible outdoor lighting that addresses the fundamental relevance of illumination to ensure safety and create identity.

On the one hand, this illuminates our living spaces.

On the other hand, it prevents negative impacts on animal habitats where possible, in natural spaces as well as urban environments.

Dark Sky

luminaires for natural environments

The luminaires in our **Dark Sky** range direct their light onto the surface to be illuminated with high efficiency, while emitting no light or less than 1% of their light into the upper half-space of the luminaire.

bega.com/darksky

BEGA BugSaver®

Eco-friendly light for the protection of nocturnal animals

We have developed luminaires with **BEGA BugSaver®** technology for efficient illumination in urban and natural environments. This technology enhances the sense of security for people, while protecting nocturnal animals.

- Reduction of the colour temperature from 3000K to an amber hue with significantly reduced blue light component (similar to 1800K)
- Control optionally via BEGA BugSaver® control devices (up to 9 luminaires) or via DALI DT8

BEGA Connect

BEGA Connect brings your lighting system to the cloud. Now professional light control is easier than ever.

Configured via smartphone or tablet – from anywhere, for everywhere.

Extra practical: The required Internet connection is directly included where necessary, thanks to Narrowband IoT! Now even extensive installations can become one unified system, without being connected by a control cable.

**Simple anywhere.
Simple everywhere.**

At BEGA, we are always thinking of lighting in the context of the architecture to be illuminated. It is all about the interplay of the two, about the connection. So we created an **Architectural Lighting Management System (ALMS)** with a simple, descriptive name: **BEGA Connect**.

It expands the possibilities of professional light control and combines light and architecture into one holistic concept. A concept that is constantly adapting and evolving. And taking advantage of the latest technologies such as the Narrowband Internet of Things (Narrowband IoT).

BEGA Connect opens up countless possibilities for you to use smart light to showcase both smaller lighting installations and large illumination projects. Wherever you are:

You can control, plan and monitor individual luminaires from any location via a modern and intuitive app.

BEGA Connect simplifies complex systems for beginners and experts alike. Reliable and secure:

Up to the highest standards and with all your data on cloud servers in Germany in accordance with strict German data protection laws.

BEGA Connect means:

Focusing on what's important, simple and intuitive. The sophisticated user interface of the BEGA Connect mobile and web app is straightforward and easy to use even without prior technical knowledge.

Once the electrical installation is complete, the intuitive BEGA Connect app guides you through the configuration comprising only a few steps – complex technical decisions are made automatically in the background. You then have all illumination options at your disposal, governed by a superior utilisation concept that is unrivalled in the professional sector.

connect.bega.com

The BEGA Connect mobile app

The mobile app for Android and iOS on devices like smartphones or tablets is ideal for initial on-site setup and configuration of a system.

The BEGA Connect web app

For convenient and clear management of your lighting systems, you can use the browser-based web app on any device wherever you are. This enables you to make extensive adjustments to large systems on a full-screen display for convenience and easy visibility.

Efficient light control in Smart Homes based on the integration of intelligent standards

BEGA Smart

What advantages does light control offer?

Controlling the light means dimming individual luminaires, bundling them in groups, and switching them on and off at specific times. An intelligent light control system does all that and more.

Our light control systems were developed for daily use. For a home where everything is straightforward. For an increasingly convenient automation of your lighting.

Light control can also be used offline if you choose, that is, without any Internet connection. In this case, you can still control the light conveniently with your smartphone using the app.

Alternatively, you can control your Smart Home online – no matter where you are.

All devices are networked wirelessly: This is easy and flexible not only in new buildings but especially in existing structures, since no separate control cables are required. This prevents the need for extensive renovation work.

You can find all BEGA Smart system components on Page 406.

bega.com/smart

wibutler

Open source for everyone – and safe

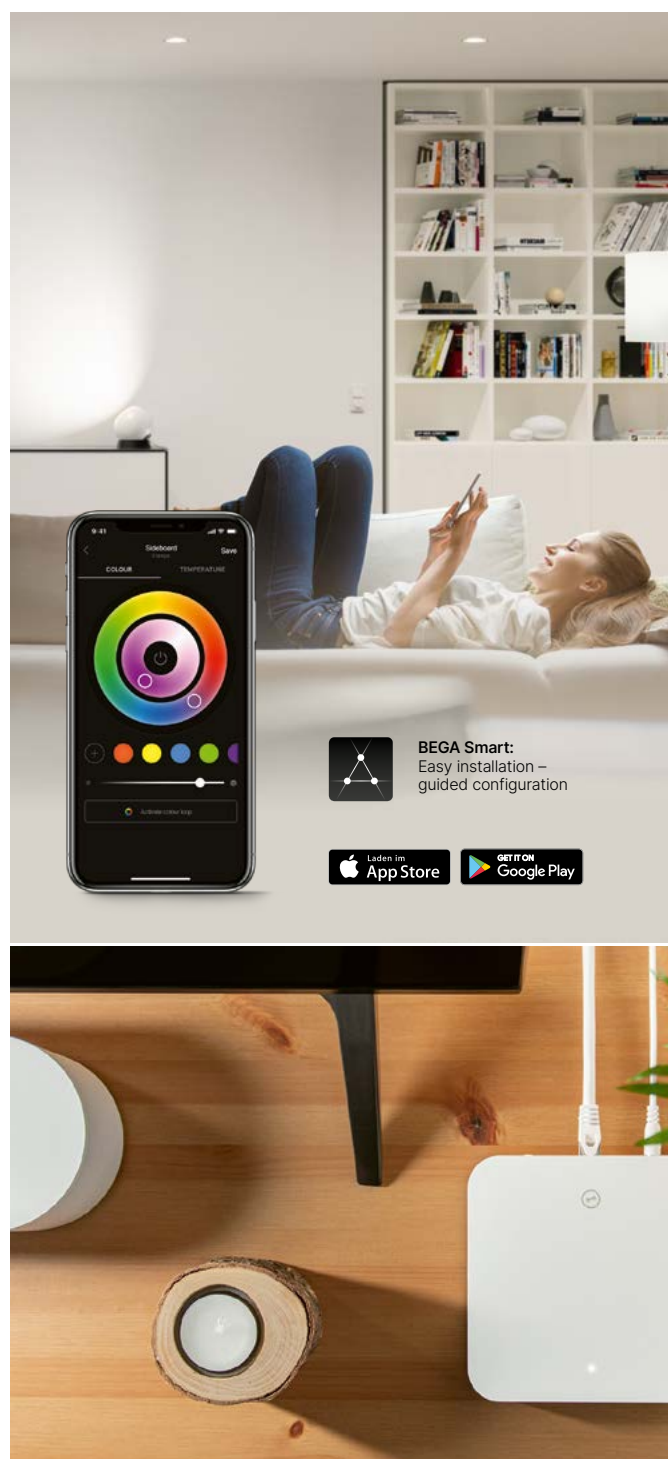

The wibutler OS offers a platform for digital building control. BEGA Smart components can easily be integrated into a Professional Smart Home alongside third party products using wibutler pro – safe cloud access from anywhere is included.

The cross-device control system allows easy operation of lighting systems, electronics, sensors, ventilation systems, heating systems, motorised awnings and roller shades and much more – all via one single app. It allows over 300 devices from more than 40 brands to be securely networked together.

Your advantages in combination with BEGA Smart products:

- Networking options with other devices and third-party products
- Control flexibility – by switch, voice command, smartphone...
- Easy initial setup and clear navigation
- Remote control of the entire system

wibutler.com

Outdoor luminaires

We have been developing and producing high-quality luminaires for almost all areas of architecture for 80 years. We know the extreme conditions which particularly outdoor luminaires have to face up to. They are exposed to dirt, atmospheric influences and extreme temperature fluctuations. They have to stand up to enormous stress more than other luminaires.

The following section of the full product range provides you with a complete overview of all BEGA outdoor luminaires and all the most important data at a glance.

You will find detailed technical data for all luminaires, accessories and components on our website.

Use our convenient search feature to search by article number or keyword.

Reflector surface made of pure aluminium · Optical silicone lens

External DALI controllable power supply units included · BEGA Thermal Management®

For luminaires with zoom optics, half beam angles between 14° and 54° can be set by simply moving the lens unit.

Suitable installation housings for installing the luminaire and power supply unit in concrete ceilings can be found in the table.

Colour temperature: 3000 K – article number + **K3** or 4000 K – article number + **K4**

Luminaires with BEGA BugSaver® technology can be switched from warm white light with a colour temperature of 3000 K to light with highly reduced blue light portion to protect nocturnal insects. This phosphor-converted amber has a colour temperature of around 1800 K and is considered to be particularly insect-friendly. Our control devices can be used to achieve additional power reduction, see Page 433.

We have developed luminaires with **BEGA BugSaver®** technology for efficient illumination in urban and natural environments. This system allows a switch-over to amber light, which is far less attractive to insects.

We have developed these compact recessed ceiling downlights specially for flush installation in unplastered and plastered concrete ceilings. Suitable installation housings are available for any installation situation, including for installation in precast ceilings and in-situ concrete ceilings. Upon completion of the ceiling, the luminaires are inserted into the recessed housing via a bayonet closure.

Installation housing with low installation depth

An installation housing is always required for installing the luminaires. Please order the appropriate installation housing for the installation of the luminaire and power supply unit according to your on-site use. Various installation housings are available for installation in plastered or unplastered concrete ceilings. The installation depth is 145 mm in each case.

The underneath of this recessed ceiling luminaire is visible through an edgeless safety glass pane. LEDs are arranged in a ring behind a small conical shield inside the luminaire. They emit 6500 K daylight white light as an indirect light source. In the centre of the luminaire, a downlight with BEGA Hybrid Optics® provides a high luminous flux at 3000 K for the appropriate degree of illuminance on the working plane. The interplay of downward-directed, warm white light and indirect daylight white light creates a unique lighting atmosphere that gives the impression of a sunny sky.

Recessed wall luminaires · Overview

BEGA recessed wall luminaires feature a wide range of light distributions and sizes that allow for precise adaptation to a variety of lighting applications. Whether unshielded or shielded light in different light distributions, the right option is available for every application. The varying sizes and shapes offer maximum flexibility and top durability to fulfil both aesthetic and functional requirements equally.

For easy installation and integration in various construction methods, suitable installation housings are available for all luminaires. Furthermore, plaster frames are available for many models, allowing for either surface-mounted or flush installation.

BEGA recessed wall luminaires also offer a sophisticated solution for the modernisation of existing systems: The geometry of the luminaires has been maintained without changes so that they can be integrated into existing recessed housings without a problem. This facilitates an efficient upgrade to modern, efficient LED technology without requiring structural modifications to existing installations.

BEGA recessed luminaires
Overview of installation options

For decades, BEGA luminaires with this design have featured as exemplary luminous architectural details on numerous buildings around the world. They are and have always been characteristic of a whole series of luminaires in our range of products and became models for outdoor luminaires in general.

The current versions of the recessed luminaires on Pages 46 to 55 are designed specifically for our LED technology, have the same installation dimensions as their predecessors – a replacement is therefore possible – and will not require any changes in the existing installation.

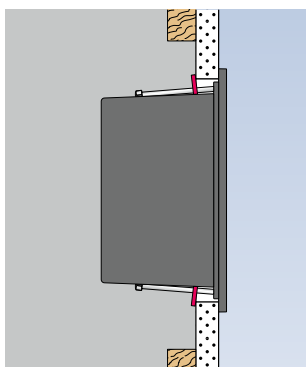

All luminaires are characterised by a slim luminaire frame without screws. The extremely low maintenance requirements of our LED technology enables a new product concept with far easier and quicker installation. The electrical connection of all luminaires is done quickly and easily before installation in the structure.

We have a range of perfectly matched accessories available for various installation situations. During the planning phase, please pay attention to the instructions for use for the installation housings and plaster frames available on our website.

Cavity wall	Brickwork	Concrete	EWIS
<p>Installation in cavity walls</p> <p>All recessed luminaires come with the BEGA mounting system and can be flush-mounted in cavity walls of all kinds without any need for additional accessories.</p>	<p>Installation in brickwork or concrete</p> <p>Use the type A installation housing to create the perfect recessed opening for installations in brickwork or concrete. Two plaster frames are available if brickwork or concrete is to be subsequently plastered, both of which allow for various plaster thicknesses. The type C plaster frame allows the surface-mounted installation of the luminaires. With the type D plaster frame, the luminaires are installed flush.</p>	<p>Installation in external wall insulation systems (EWIS)</p> <p>For installation in external wall insulation systems (EWIS), BEGA offers a system solution certified by the Passive House Institute. The type B installation housing adjusts flexibly to insulation depths between 120 and 200 mm. Depending on the plaster frame, the luminaires (type C) can be surface or flush (type D) mounted.</p>	

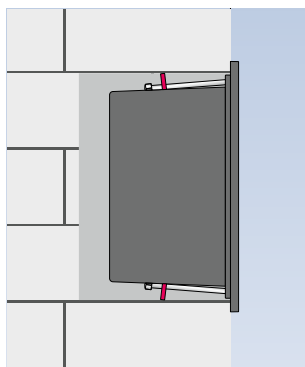

Surface-mounted installation

in cavity walls of all kinds

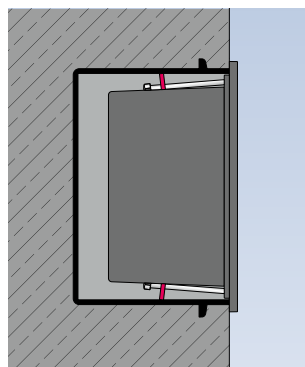

The BEGA mounting system allows fast and convenient installation in lightweight construction walls without any accessories.

in unplastered brickwork

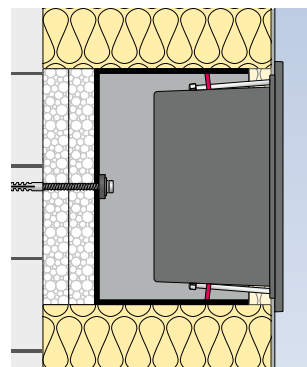

The construction of an recessed opening on site with the exact installation dimensions of the luminaire is required. An installation housing cannot be used.

in unplastered concrete

We recommend using the **type A** installation housing for the preparation of the recessed opening in concrete.

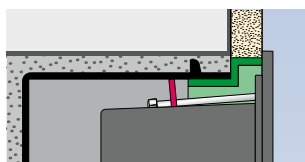

in unplastered EWIS façades

The **type B** installation housing comes with a selection of insulation elements to allow an adjustment to insulation depths between 120 and 200 mm.

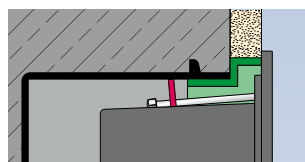

Surface-mounted installation

in plastered brickwork

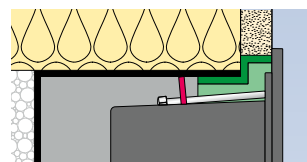

The **type C** plaster frame in conjunction with the **type A** installation housing helps compensate for various plaster thicknesses.

in plastered concrete

The **type C** plaster frame in conjunction with the **type A** installation housing helps compensate for various plaster thicknesses.

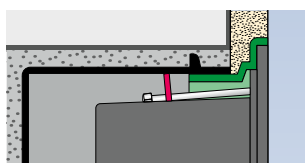

in plastered EWIS façades

The **type C** plaster frame in conjunction with the **type B** installation housing helps compensate for various plaster thicknesses.

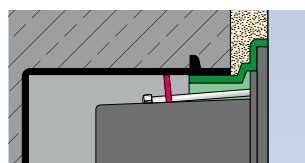

Flush-mounted installation

in plastered brickwork

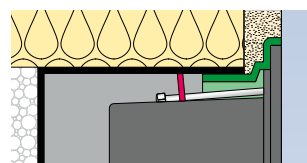

The **type D** plaster frame in conjunction with the **type A** installation housing helps compensate for various plaster thicknesses and allows a flush-mounted installation of the luminaires.

in plastered concrete

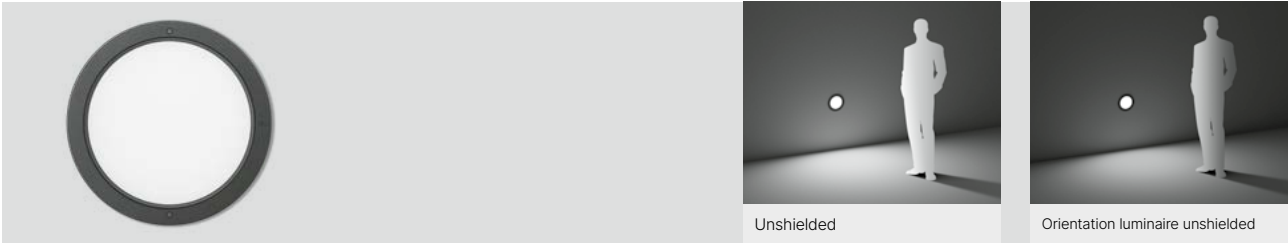

The **type D** plaster frame in conjunction with the **type A** installation housing helps compensate for various plaster thicknesses and allows a flush-mounted installation of the luminaires.

in plastered EWIS façades

The **type D** plaster frame in conjunction with the **type B** installation housing helps compensate for various plaster thicknesses and allows a flush-mounted installation of the luminaires.

Recessed wall luminaires

Recessed wall luminaires 24 V DC, made of stainless steel

Unshielded luminaires, luminaires with asymmetrical light distribution or RGB recessed luminaires for additive colour mixing

Protection class IP 67 · Safety class III
Housing and cover frame made of stainless steel · Safety glass · Connecting cable

A separate 24 V DC power supply unit is required to operate the luminaires.
You will find suitable power supply units on Page 436.

Operating the RGB recessed luminaires requires a colour light control unit.
DALI system components can be found on Pages 428 to 433.

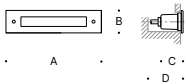

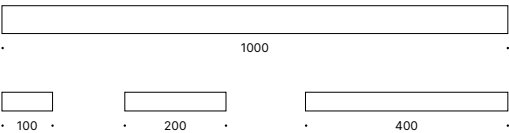

Depending on the size, the luminaires can be used in walls as well as in staircase risers, indoors and outdoors.

A variety of perfectly matched accessories are available for the various installation situations.
During the planning phase, please pay attention to the instructions for use for the installation housings available on our website.

Colour temperature: 3000 K – article number + **K3** or 4000 K – article number + **K4**

On request, we can also supply these luminaires in the light colours green, blue, amber or red.

20-year availability guarantee for replacement parts and LED modules

Ceiling luminaires · Downlights

Symmetrical, asymmetrical and flat beam light distribution

Zoom optics with adjustable light distribution, BEGA Ultradark Optics® or BEGA BugSaver® technology

Protection class IP 65

Luminaires with Ø 225 mm are ballproof

On request, we also deliver all other luminaires (with the exception of downlights with BEGA Ultradark Optics®) at the same price in a ballproof version.

Cast aluminium · Safety glass · Reflector surface made of pure aluminium · Optical silicone lens

Luminaires with BEGA Ultradark Optics®:

Internal louvres with ultra-black coating for maximum light absorption · Polymer lens BEGA NeoGlass®

on/off or DALI controllable power supply units · BEGA Thermal Management®

For luminaires with zoom optics, half beam angles between 13° and 53° can be set by simply moving the lens unit.

Colour temperature: 3000K – article number + **K3** or 4000K – article number + **K4**

Luminaires with BEGA BugSaver® technology can be switched from warm white light with a colour temperature of 3000K to light with highly reduced blue light portion to protect nocturnal insects. This phosphor-converted amber has a colour temperature of around 1800K and is considered to be particularly insect-friendly.

Our control devices can be used to achieve additional power reduction, see Page 433.

In the table you will find suitable surface-mounting frames made of highly resistant synthetic material for surface-routed wiring of luminaires, which can be ordered separately in the colours graphite and white.

Surface mounting frame

BEGA mounting frames enable surface-mounted cabling for ceiling or wall luminaires.

We have developed luminaires with **BEGA BugSaver®** technology for efficient illumination in urban and natural environments. This system allows a switch-over to amber light, which is far less attractive to insects.

BEGA Vortex Optics®

BEGA Vortex Optics® features twisted reflectors with a surface made of pure aluminium.

The more intensive bundling of light ensures perfect light control. The result is optimised light distribution without artefacts. Thanks to excellent glare control, BEGA Vortex Optics® achieve excellent visual comfort. In combination with the LED Modules, exceptional lighting results are achieved.

Please refer to the technical planning data for planning and installation. The current values for LED service life, luminous flux, maximum ambient temperature and information about the use of BEGA Thermal Management® are readily available in the instructions for use and data sheets on our website.

BEGA high-performance downlights can be mounted with a mounting frame directly under ceilings and cantilever plates or suspended from high ceilings using the steel wire set. The mounting frame and steel wire set are BEGA accessories and must be ordered separately. The luminaires are also equipped with suspension devices so that they may be suspended by means of on-site fixings. Technical data on the BEGA mounting frames and the BEGA steel wire set can be found in the data sheets on our website.

Configuration and control via BEGA Smart

BEGA Smart controllable luminaires can be networked, switched, dimmed and adjusted to a colour temperature of 3000K or 4000K. Luminaires with an integrated passive infrared motion and light sensor are extremely easy to configure via Bluetooth and the free app BEGA Smart.

Other luminaires that are networked via BEGA Smart after sunset and when motion is detected, can be controlled (for example suitable wall luminaires without sensor).

Configuration and control via BEGA Smart

BEGA Smart controllable luminaires can be networked, switched, dimmed and adjusted to a colour temperature of 3000K or 4000K. Luminaires with an integrated passive infrared motion and light sensor are extremely easy to configure via Bluetooth and the free app BEGA Smart.

After sunset and when motion is detected, additional luminaires that are networked via BEGA Smart (for example the matching ceiling and wall luminaires without sensors) can be controlled.

Floodlights · Overview

Our extensive and efficient floodlight series offers solutions for complex lighting requirements.
To help you get started quickly with the performance class and application range of your choice, this overview provides good orientation. Comprehensive information about each floodlight type can be found on our website and in the luminaires' associated data sheets.

BEGA UniLink® compact floodlights

- with earth spike
- with connection adapter

Protection class IP 65
Cast aluminium · Safety glass · Reflector surface made of pure aluminium
Optical lens made of BEGA NeoGlass®
BEGA Hybrid Optics®
Earth spike made of glass-fibre reinforced synthetic material
on/off power supply units · BEGA Thermal Management®

Shields and diffuser lenses for altering the light distribution are available as accessories for these floodlights. These can be used individually or in combination.
You will find additional accessories on Page 117.

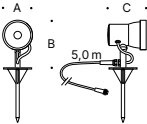

BEGA UniLink® luminaires are factory-fitted with a five-metre connecting cable with a waterproof BEGA UniLink® plug connector. These can be connected as needed to BEGA UniLink® extension cables or BEGA UniLink® five-way distribution boxes.
An overview of all available national mains plugs and BEGA UniLink® accessories can be found on Page 438.

Gobo-masks

Our BEGA Gobo-floodlight for commercial Gobo-Masks is the perfect tool for memorable light staging. At www.emea.rosco.com, you can find a large selection of Gobo-Motifs in custom sizes or have them made to order to suit your individual requirements.

The article numbers of our floodlights are known to Rosco and its distribution partners, which facilitates the ordering of multi-coloured Glass-Gobos for special effects to match our BEGA Gobo-floodlights. All you have to do is state our BEGA article number when placing your order.

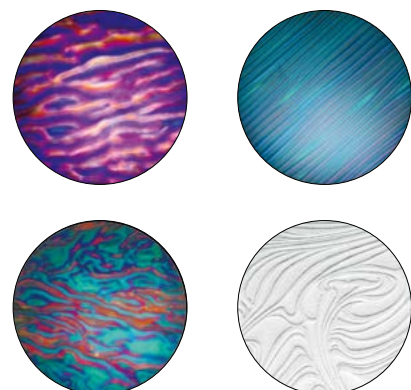

Image distortion may occur depending on the placement of the floodlight relative to the projection surface. We recommend providing all necessary dimensional data alongside your order to prevent such unwanted effects right at the planning and production stage (keystone calculations).

Metal-Gobos allow light/dark motifs to be projected onto on the presentation surface.

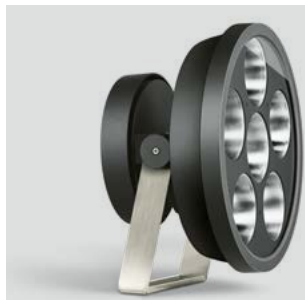

Glass-Gobos are made by lasering the motif content into wafer-thin carrier layers, and these can project solid shapes, shades of grey, colours and colour gradients.

BEGA UniLink® luminaires

Every **BEGA UniLink® luminaire** is equipped with a five-metre-long connecting cable with a waterproof plug connector. Using the mains plug specific to your region, you can connect the individual luminaires to an outdoor socket or alternatively use a connecting cable with loose cable ends for fixed installation. With **BEGA UniLink® system components** such as extension cables and five-way distribution boxes, BEGA UniLink® luminaires can be individually extended or added to lighting systems. The maximum distance of a BEGA UniLink® luminaire from the power source should not exceed 50 metres.

BEGA UniLink® floodlights with connection adapter can easily be installed at nearly any location of your choice using tube clamp, lashing strap, screw clamp, G½ fastener or a fastener with a screw thread.

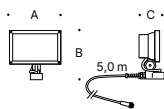

An overview of all available national mains plugs and BEGA UniLink® accessories can be found on Page 438.

BEGA UniLink® luminaires

Every **BEGA UniLink® luminaire** is equipped with a five-metre-long connecting cable with a waterproof plug connector. Using the mains plug specific to your region, you can connect the individual luminaires to an outdoor socket or alternatively use a connecting cable with loose cable ends for fixed installation. With **BEGA UniLink® system components** such as extension cables and five-way distribution boxes, BEGA UniLink® luminaires can be individually extended or added to lighting systems. The maximum distance of a BEGA UniLink® luminaire from the power source should not exceed 50 metres.

BEGA UniLink® floodlights with connection adapter can easily be installed at nearly any location of your choice using tube clamp, lashing strap, screw clamp, G½ fastener or a fastener with a screw thread.

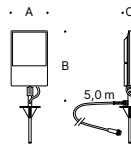

An overview of all available national mains plugs and BEGA UniLink® accessories can be found on Page 438.

Façade floodlights

Protection class IP 65
Cast aluminium · Safety glass
Reflector made of pure anodised aluminium · BEGA Constant Optics®
DALI controllable power supply units · BEGA Thermal Management®

Please note:

A separate connection box is required for the electrical connection to the luminaires. If the luminaires are connected in series (max. 12 luminaires per connection), a connection box is only required for the first luminaire. For installation with wall outrigger arms please order connection box 71064. Connection boxes are accessories and must be ordered separately. The connection from one luminaire to another is made with the connection cables supplied with the luminaires.

Façade floodlights can be mounted on cantilever plates, canopies or external window sills, or can be fixed to a façade with wall outrigger arm 71036. The inclination angle of the floodlight is adjustable.

Please observe the instructions for use.

The RGBW-luminaires of this series can be controlled via DALI colour light control (DT 8, RGBWAF, xy). Matching DALI system components can be found on Pages 428 to 433.

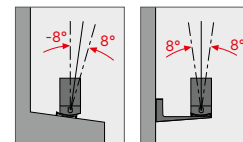

Colour temperature: 3000K – article number + **K3** or 4000K – article number + **K4**

Protection class IP 65

Cast aluminium and stainless steel · Safety glass

Reflector made of pure anodised aluminium · BEGA Constant Optics®

Stainless steel mounting brackets.

DALI controllable power supply units · BEGA Thermal Management®

Please note:

A separate connection box is required for the electrical connection to the luminaires. If the luminaires are connected in series (max. 12 luminaires per connection), a connection box is only required for the first luminaire.

Connection boxes are accessories and must be ordered separately.

The electrical connection is made via the supplied connecting cables if the luminaires are installed side by side without gaps. Matching connection cables, which are listed in the table, can be ordered separately where the intended installation gaps are larger.

The downward directed installation easily illuminates the façade without undesirably brightening the night sky.

The inclination angle of the floodlight has an adjustment range of $\pm 30^\circ$. Please observe the instructions for use.

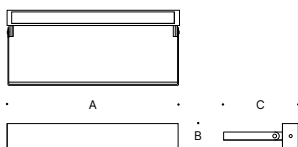

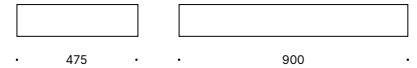

The RGBW floodlights of this series can be controlled via DALI colour light control (DT8, RGBWAF, xy).

Matching DALI system components can be found on Pages 428 to 433.

We offer an anchorage section with connection compartment as an accessory to meet any requirements at the installation site. The luminaires can therefore be installed on unpaved substrates. We recommend using BEGA distribution box 70730 if through-wiring to another luminaire is required.

The distribution box is suitable for installation in the anchorage section with connection compartment.

For more information about the anchorage section with connection compartment and distribution boxes, see Page 446.

Accessories for underwater luminaires

Hose screw closure made of stainless steel

Hose screw closure for sealing soft PVC protective hoses
which are used to route cables of swimming pool luminaires.
Stainless steel · Material no. 1.4401
1 connection pipe for soft PVC protective hose Ø 20×3 mm · Pipe length 29 mm
1 PG 16 screw cable gland with gasket inserts for connecting cable Ø5–13 mm
1 hose clip DIN 3017
Belt width 9 mm · Clamping range 20–32 mm

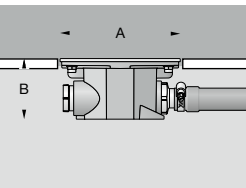

71 266 Hose end screw connection

Distribution box

Distribution box for installation in floor and wall surfaces
For installing the cables of swimming pool luminaires in safety class III
Protection class IP 67
Cover stainless steel · Material no. 1.4404 · Electropolished
Housing glass fibre reinforced synthetic material
2 screw cable glands
1 lateral hose connection for soft PVC protective hose Ø20×3 mm
After installation, the distribution box must be sealed with a sealing compound!
Technical data can be found in the distribution box data sheet on our website.

 84 675 · 84 676 · 84 677 · 84 678 Stainless steel, material number 1.4529, electropolished
 Safety glass · BEGA Constant Optics® · Reflector surface made of pure aluminium
 BEGA Ultimate Driver® · BEGA Thermal Management®
 Chlorine water resistant cable
 Luminaires for saltwater swimming pools: maximum brine concentration 7%
 Recommended installation depth 400 to 700 mm under the water surface

An external 24 V DC safety power supply unit is required to operate the luminaires.
 The RGBW-luminaires can be controlled by DALI colour light control (DT8, RGBWAF).
 For control in a DALI system, the BEGA Safety Transceiver is required.
 For more detailed information, see Page 436.
 Safety regulations must be observed when installing and operating these luminaires and operating devices.

For each of these swimming pool luminaires, you can find the matching installation housing for the corresponding pool type in the table. The installation housings Type B, C and D are coated with quartz sand all the way around to a width of 50 mm.

In-ground and on-ground luminaires · Overview

Our extensive and efficient in-ground luminaires series offers solutions for versatile lighting requirements. To help you get started quickly with the performance class and application range of your choice, this overview provides useful orientation. Comprehensive information about each in-ground luminaire type can be found on our website and in the luminaires' associated data sheets.

For more than 50 years, we have been working intensively on illumination from ground level. We had a formative influence on many of the current standards according to which the quality of this group of luminaires is judged. There is a large number of requirements that these luminaires have to meet and just as many installation situations. The pressure loads to which a luminaire can be subjected when driven over are equally important as protection against flooding, for example.

Depending on the installation depth and ground quality at the installation site, the installation depth of a product and also the material of a luminaire may play a decisive role.

Along with in-ground luminaires, we also present on-ground luminaires here, which offer similar or identical functions and light outputs as their corresponding in-ground luminaire. These can provide an attractive alternative, particularly in situations where complete installation in the ground is not necessary or not desired.

Walk-over floodlights for installation in soil

Walk-over in-ground luminaires as floodlights with symmetrical or asymmetrical light distribution specially designed for installation in gravel, lawns or flower beds in private gardens. They can be installed in soil without a drainage connection or foundation.

Perfect for showcasing or accentuating small trees, shrubs and other decorative objects in private gardens. Luminaires that allow you to experience the beauty of the garden even by night.

In-ground luminaires 24V DC
with compact dimensions for installation in holes to be drilled by the customer

In-ground luminaires with compact dimensions, optionally available as orientation luminaires or floodlights, for installation in paved surfaces with holes drilled by the customer. Installation housings made of stainless steel are available, should the installation situation require them. For this installation situation you need to create a foundation with drainage. The installation housings will transfer the permissible pressure load of 1000 kg to the foundation. The luminaires can be driven over by vehicles with pneumatic tyres.

In-ground luminaires with compact dimensions for flush installation

In-ground luminaires with compact dimensions, specially designed for flush installation in paved ground surfaces – indoors and out. Luminaires optionally available in a round or square design with convincing LED technology and impressive material quality.

The luminaires are mounted in a housing made of cast stainless steel on a foundation provided by the customer that absorbs the pressure loads.

The luminaires can be driven over by vehicles with pneumatic tyres.

77 119	4.1 W	380 lm	on/off	34°/35°	115	80 × 130

* Safety class III · Suitable 24 V DC power supply units can be found on Page 436.

Please refer to the technical planning data for planning and installation. The current values for LED service life, luminous flux, maximum ambient temperature and information about the use of BEGA Thermal Management® are readily available in the instructions for use and data sheets on our website.

In-ground luminaires
for installation in round cut-outs created by the customer

An extensive and efficient series specially designed for installation in ground surfaces with holes drilled by the customer, both indoors and out. Different light characteristics and light outputs are available for your planning work.
The luminaire housings are made entirely of stainless steel. They are ideal for installation in core-drilled holes or cut-outs in floor sections. The BEGA mounting system allows fast, secure and accurately positioned installation of the luminaires.
The luminaires in this series can be driven over by vehicles with pneumatic tyres.

In-ground luminaires
for installation in round cut-outs created by the customer

Pressure load	2000 kg
Material	Stainless steel
Protection class	IP 68 · 10 m
Installation depth	80 – 225 mm
Size Ø	155 – 330 mm

Trim ring and luminaire housing made of stainless steel · Safety glass
Reflector surface made of pure aluminium
BEGA Ultimate Driver® · BEGA Thermal Management®

Integrated water stop and connecting cable

84622 · 84628 · 84632 with internal louvre and ultra-black coating for maximum light absorption
Polymer lens made of BEGA NeoGlass® · BEGA Ultradark Optics®
BEGA Hybrid Optics®

Floodlights with symmetrically and asymmetrically wide beam light distribution and RGBW luminaires:
BEGA Constant Optics®

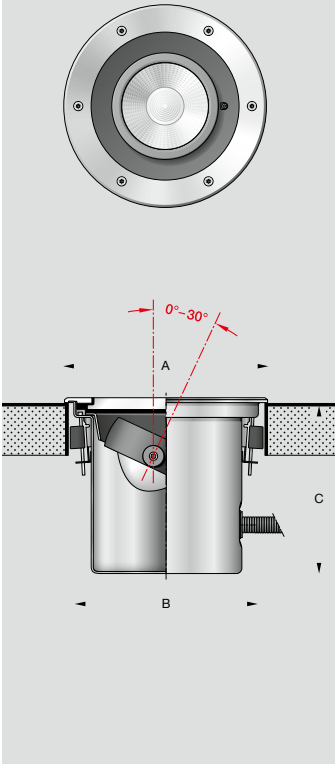

Matrix floodlights with dynamic light distribution can be adjusted with the BEGA Tool app.
Once configured, the luminaire can access a predefined setting in on/off mode, or call up one of many saved scene configurations via DALI.

The RGBW-luminaires can be controlled via a DALI colour light control (DT8, RGBWAF, xy, TC).
Suitable DALI system components can be found on Pages 428 to 433.

With the additional specification **R** after the article number, we can supply all luminaires with skid-blocking glass with DIN 51130.

Colour temperature: 2700K – article number + **K27** or 3000K – article number + **K3**

20-year availability guarantee for replacement parts and LED modules

In-ground luminaires for installation in ground surfaces

An extensive and efficient series of in-ground luminaires for use both indoors and out. Different light characteristics and light outputs are available for your planning work. The luminaire housings are made entirely of stainless steel.

Depending on the installation situation, the luminaires can be installed using installation housings or simply "floating", e.g. in gravel, lawns, flowerbeds or paved surfaces. If the luminaires are to be used with an installation housing, a foundation with drainage must be provided by the customer. The luminaires in this series can be driven over by vehicles with pneumatic tyres.

In-ground luminaires for installation in paved surfaces for installation situations with high pressure loads

Drive-over, in-ground luminaires with high light output as orientation luminaires and floodlights for installation in paved ground surfaces both indoors and out.

The luminaires from this series are installed as orientation luminaires and floodlights in paved surfaces with the highest pressure loads, for example in temporary thoroughfares. They can be driven over by vehicles with pneumatic tyres up to a pressure load of 5000 kilograms. Before the luminaires are installed, a foundation including drainage must be provided by the customer to absorb the pressure loads of the luminaires.

In-ground luminaires for installation in paved surfaces for installation situations with high pressure loads

Pressure load	5000 kg
Material	Stainless steel · Cast aluminium · Synthetic material
Protection class	IP 68 · 10 m
Installation depth	220 – 250 mm
Size Ø	205 · 240 · 330 mm

Trim ring made of stainless steel · High-strength cast aluminium · Glass fibre reinforced synthetic material
BEGA Tricoat® coating technology
Safety glass · Floodlight reflector surface made of pure aluminium
BEGA Ultimate Driver® · BEGA Thermal Management®
Integrated water stop and connecting cable

BEGA Hybrid Optics®

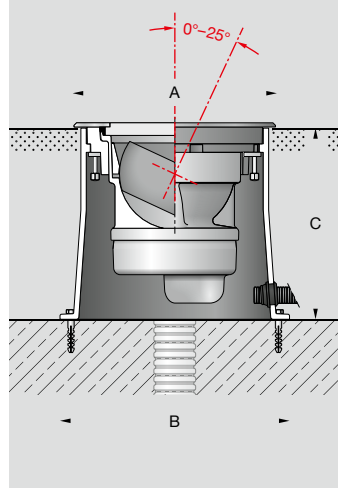

Floodlights with symmetrically and asymmetrically wide beam light distribution and RGBW luminaires:
BEGA Constant Optics®

The RGBW-luminaires can be controlled via a DALI colour light control (DT 8, RGBWAF, xy, TC).
Suitable DALI system components can be found on Pages 428 to 433.

With the additional specification **R** after the article number, we can supply all luminaires with skid-blocking glass with DIN 51130 R13.

Colour temperature: 2700 K – article number + **K27** or 3000 K – article number + **K3**

20-year availability guarantee for replacement parts and LED modules

Please refer to the technical planning data for planning and installation. The current values for LED service life, luminous flux, maximum ambient temperature and information about the use of BEGA Thermal Management® are readily available in the instructions for use and data sheets on our website.

In-ground luminaires for installation situations with shallow installation depths and for flush installations

Thanks to their low height, these luminaires are particularly suitable for areas where only a limited installation depth is available, e.g. parking decks or suspended ceilings, both indoors and out. Before the luminaires are installed, the customer must lay a foundation to absorb the pressure loads of the luminaires. The luminaires can be driven over by vehicles with pneumatic tyres.

In-ground luminaires
for installation situations with shallow installation depths and for flush installations

Pressure load **3000 kg**
Material **Stainless steel · Cast stainless steel**
Protection class **IP 68 · 10 m**
Installation depth **130 mm**
Size Ø **205 · 260 mm**

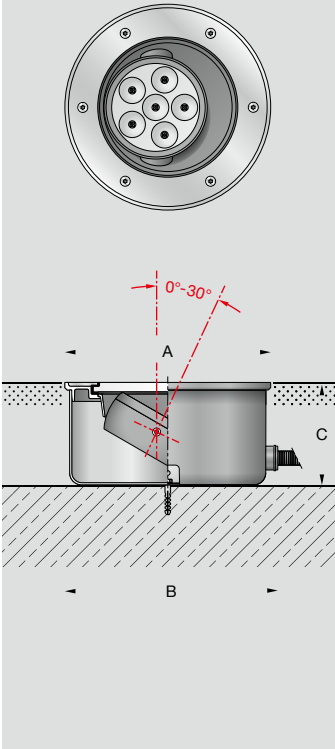

Trim ring and luminaire housing made of stainless steel and cast stainless steel · Safety glass
Floodlights with reflectors made of pure anodised aluminium · BEGA Constant Optics®
BEGA Ultimate Driver® · on/off or DALI controllable
BEGA Thermal Management®
Integrated water stop and connecting cable

With the additional specification **R** after the article number, we can supply all luminaires with skid-blocking glass with DIN 51130 R13.

Colour temperature: 2700K – article number + **K27** or 3000K – article number + **K3**

On request, the luminaires are available in the light colours green, blue, amber and red.

20-year availability guarantee for replacement parts and LED modules

In-ground luminaires for installation situations with high pressure load

Our patented reflectors (European Patent EP 3098504) enable perfect light deflection through intensive concentration of the light with maximum visual comfort. These luminaires are ideal for areas subject to heavy use.

The installation housing made of highly corrosion-resistant aluminium sits on its own foundation and can withstand pressure loads of up to 5000 kg. Before the luminaires are installed, a foundation including drainage must be provided by the customer to absorb the pressure loads of the luminaires. The luminaires can be driven over by vehicles with pneumatic tyres.

In-ground luminaires

for installation situations with high pressure load

Pressure load	5000 kg

In-ground luminaires 24 V DC
for installation in paved surfaces
for installation situations with shallow installation depths

Linear in-ground luminaires in various lengths for installation in paved ground surfaces indoors and out. The various lengths and the compact dimensions allow a multitude of design possibilities with linear light from ground level.
Before the luminaires are installed, a foundation including drainage must be provided by the customer to absorb the pressure loads of the luminaires.
The luminaires can be driven over by vehicles with pneumatic tyres.

In-ground luminaires made of stainless steel 24 V DC
for installation in paved surfaces
for installation situations with shallow installation depths

Pressure load **1000 kg**
Material **Stainless steel · Aluminium**
Protection class **IP 67**

On-ground luminaires
for the illumination of ground surfaces

The construction principle of these luminaires provides a solution for numerous lighting applications involving large-area ground illumination. The significantly lower amount of installation work required in comparison to recessed luminaires and the different installation variants reduce installation costs and offer a high degree of flexibility. The luminaires are simply secured to the substrate by means of a mounting plate. A hole drilled under the luminaire by the customer is required for the cable routing. We offer an anchorage unit with connection compartment as an accessory to meet any requirements at the installation site. The luminaires can therefore be installed on unpaved substrates. For more information about anchorage units with connection compartment, see Page 446. Depending on the ground's load-bearing capability, the luminaires can support loads of up to 1000 kg and can be driven over by vehicles with pneumatic tyres.

On-ground luminaires
for on-ground installation to illuminate ground surfaces

Pressure load **1000 kg**
Material **Stainless steel · Cast aluminium**
Protection class **IP 67**
Size Ø **160 · 270 mm**

Cast aluminium and stainless steel · Borosilicate glass
Reflector made of pure anodised aluminium · BEGA Constant Optics®
BEGA Thermal Management® · Integrated water stop and connecting cable
A separate 24 V DC power supply unit is required to operate the luminaires 77 069 and 77 070.
For more information, see Page 436.

We offer an anchorage unit with connection compartment as an accessory to meet any requirements at the installation site. The luminaires can therefore be installed on unpaved substrates. We recommend using the BEGA distribution box 70 730 if through-wiring to another luminaire is required. The distribution box is suitable for installation in the anchorage unit with connection compartment. For more information about anchorage units with connection compartments, see Page 446.

In-ground luminaires with compact dimensions or for the illumination of ground surfaces in installation situations with high pressure loads

Two designs of these in-ground luminaires are available for you to choose from. They differ in their dimensions, the light output and pressure load which they can withstand when driven over by pneumatic tyres.

In order to accommodate the pressure loads of the luminaires, a foundation installed by the customer is required for both versions.

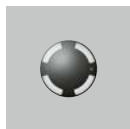

The luminaires serve to illuminate the ground surfaces directly above ground level. Their light is directed straight onto the surface to be illuminated, thus illuminating walkways and traffic areas or highlighting potential hazards such as stairs and steps.

In-ground luminaires · Wall washers
with a shallow installation depth for the illumination of vertical surfaces

Drive-over, in-ground luminaires for installation in paved ground surfaces.
The lighting technology and design of these in-ground floodlights make it possible to illuminate a vertical surface, for example a façade, almost completely from the ground to the lower edge of the roof.
The lower limit of the light distribution is linear, without the usual “light cone” seen with in-ground floodlights.
The technically identical luminaires are optionally available with a cover, made of corrosion-resistant cast aluminium or cast bronze.
The luminaires are mounted in an installation housing on a foundation that absorbs the pressure loads.
The foundation, including drainage, must be laid by the customer prior to installation.
The luminaires can be driven over by vehicles with pneumatic tyres.

On-ground luminaires · Wall washers for the illumination of vertical surfaces

On-ground luminaires are a great alternative wherever drive-over resistance or a flush surface installation are not necessary. They are considerably easier to install than in-ground luminaires. In contrast to conventional floodlights, which can be adjusted freely, the closed housings of these luminaires offer additional advantages.

The wall washers make it possible to illuminate a vertical surface, such as a façade, almost completely from the ground to the lower edge of the roof. The lower limit of the light distribution is linear, without the usual "light cone" seen with in-ground floodlights.

DALI controllable power supply units · BEGA Thermal Management®

The RGBW-luminaires in this series can be controlled by DALI colour light control (DT 8, RGBWAF, xy, TC). DALI system components can be found on Pages 428 to 433.

We offer an anchorage unit with connection compartment as an accessory to meet any requirements at the installation site. The luminaires can therefore be installed on unpaved substrates. We recommend using the BEGA distribution box 70730 if through-wiring to another luminaire is required. The distribution box is suitable for installation in the anchorage unit with connection compartment. For more information about anchorage units with connection compartments and distribution boxes, see Page 446.

BEGA System bollards round · Overview

BEGA System bollards are a modular system that allows the combination of luminaire heads and luminaire tubes with various additional functions.

When planning your lighting system, first select a bollard head with the desired light distribution.
Then choose a matching bollard tube for the additional functions.

Order the bollard head and your preferred bollard tube to go with it. Both modules can be connected quickly and easily during the installation.

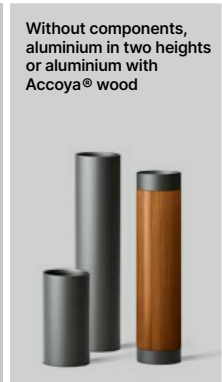

These BEGA System bollards are equipped with an alignable mounting system. It can either be bolted onto an existing foundation or a BEGA Anchorage unit. Anchorage units are accessories and need to be ordered separately.
For more information about BEGA anchorage units, see Page 447.

For more information about all round bollard tubes, see Pages 170 to 171.

BEGA System bollards · Round · Bollard tubes

Here you will find all bollard tubes for the bollard heads on Pages 172 to 179.

The brief description offers a compact overview of their functions. Detailed technical and lighting data for all the system components can be found in the data sheets and instructions for use on our website.

Bollard tubes with safety sockets have a type F socket (German/European system) as standard. On request, we can also supply the bollard tubes with other socket types for the same price. For more information about all socket types, see Page 448.

Bollard tubes without components

		H	Connection box	Anch. unit
Ø140	99 614	350	Terminals 3 × 4 □	70 894
	99 620	655	Terminals 3 × 4 □	70 894
Ø190	99 615	365	Terminals 3 × 4 □	70 895
	99 622	815	71 084	70 896
Ø265	99 619	375	Terminals 3 × 4 □	70 896
	99 624	875	71 084	70 896

Bollard tubes without any additional components are the basic tubes of the System bollards. Available in two different heights.

Bollard tubes without components with Accoya® wood

		H	Connection box	Anch. unit
Ø140	84 476	655	Terminals 3 × 4 □	70 894
Ø190	84 464	815	71 084	70 896
Ø265	84 465	875	71 084	70 896

A combination of bollard tubes made of cast aluminium with durable Accoya® wood. The use of high-quality aluminium at the base of the luminaire means the wood has no direct contact with the ground. The BEGA Coating Technology® used on the aluminium parts also ensures maximum protection in this critical area.

Bollard tubes with single emergency lighting battery

		H	Connection box	Anch. unit
Ø190	84 634	815	71 601	70 896
Ø265	84 636	875	71 601	70 896

Bollard tubes with built-in emergency lighting battery insert with self-test function for three hours of emergency lighting operation 10W · 3 h

Bollard tubes with charging module insert for electric vehicles (type 2) for charging outputs of 11 kW and 22 kW.

85 029 for type 2 plug in accordance with IEC 62196 for compliance with calibration requirements in Germany.

85 247 for type 2 plug in accordance with IEC 62196 with shutter function for operation in France, Belgium, Italy, Switzerland, Austria and the UK

Bollard tubes with charging module insert for electric vehicles (Type 2) for Germany, France, Belgium, Italy, Switzerland, Austria, UK

		H		Anch. unit
Ø265	85 029	1150	compliant with calibration regulations	70 896
	85 247	1150	including shutter function	70 896

Concrete-casting bollard tubes for foundations to be created on site. Statically tested foundation plans for different foundation heights and application situations will be provided upon receipt of your order. The product is certified for drive-through protection up to 7.5t · 50km/h.

Two foundation types are available:

the **standard foundation with a height of 800 mm** and standard reinforcement as well as the **compact foundation with a height of 380 mm**, greater reinforcement diameter and a larger footprint, ideal for car parks, for example. The decisive advantage of the compact foundation is its significantly lower projection.

BEGA System bollards · Square · Overview

BEGA System bollards are a modular system that allows the combination of luminaire heads and luminaire tubes with various additional functions.

When planning your lighting system, first select a bollard head with the desired light distribution. Then choose a matching bollard tube for the additional functions.

Order the bollard head and your preferred bollard tube to go with it. Both modules can be connected quickly and easily during the installation.

These BEGA System bollards are equipped with an alignable mounting system. It can either be bolted onto an existing foundation or a BEGA anchorage unit. Anchorage units are accessories and need to be ordered separately. For more information about BEGA Anchorage units, see Page 447.

For more information about all square bollard tubes, see Pages 182 to 183.

BEGA System bollards · Square · Bollard tubes

You will find all square bollard tubes for the bollard heads of Pages 184 to 187 here. The brief description offers a compact overview of their functions. Detailed technical and lighting data for all the system components can be found in the data sheets and instructions for use on our website.

Bollard tubes with safety sockets have a type F socket (German/European system) as standard. On request, we can also supply the bollard tubes with other socket types for the same price. For more information about all socket types, see Page 447.

Bollard tubes without components

		H	Connection box	Anch. unit
□ 160	84 000	375	Terminals 3 × 4 □	70 895
	84 002	815	71 084	70 895
□ 220	84 001	375	Terminals 3 × 4 □	70 896
	84 003	880	71 084	70 896

Bollard tubes without any additional components are the basic tubes of the System bollards. Available in two different heights.

Bollard tubes without components with Accoya® wood

		H	Connection box	Anch. unit
□ 160	84 466	815	71 084	70 895
□ 220	84 467	880	71 084	70 896

A combination of bollard tubes made of cast aluminium with high-quality Accoya® wood. The use of high-quality aluminium at the base of the luminaire means the wood has no direct contact with the ground. The BEGA Coating Technology® used on the aluminium parts also ensures maximum protection in this critical area.

Bollard tubes with single emergency lighting battery

		H	Connection box	Anch. unit
□ 160	84 006	815	70 629	70 895
□ 220	84 008	880	70 629	70 896

Bollard tubes with integrated emergency lighting battery insert with self-test function for three hours of emergency lighting operation. 10W · 3h

Bollard tubes with PIR motion and light sensor

		H	Control	Connection box	Anch. unit
□ 160	84 762	815	on/off	71 084	70 895
	84 150	815	DALI	71 084	70 895
□ 220	84 763	880	on/off	71 084	70 896
	84 152	880	DALI	71 084	70 896

Bollard tubes with integrated passive infrared motion and light sensor react to thermal radiation in the dark.

on/off: Other luminaires can be operated directly.

DALI: Additional luminaires can be controlled via a DALI bus. A DALI power supply is required to control an independent DALI line.

Bollard tubes with integrated safety socket

		H	Connection box	Anch. unit
□ 160	84 917	815	70 629	70 895

Bollard tubes with an easily accessible integrated black 250V type F (German/European system) safety socket.

The cover flap is made of cast aluminium.

On request, we can also supply other socket types for the same price.

Bollard tubes with adjustable floodlight

		H	Connection box	Anch. unit
□ 220	84 834	880	71 084	70 896

Bollard tubes with built-in LED floodlight. The floodlight has an adjustable inclination angle of ± 30°, can be rotated by 360° and adds an extra function to a system bollard so that it can illuminate architectural details, trees or plants.

BEGA Hybrid Optics®
LED floodlights 23.0 W · 2585 lm · β = 18°
Colour temperature 3000K or 4000K

**Order a bollard head of your choice and add a matching bollard tube to the order.
Both modules can be connected quickly and easily during the installation.**

BEGA bollard tubes are bolted with a mounting plate onto a foundation created on site or an anchorage unit made of hot-dip galvanised steel. The mounting system can be used to align the bollard tubes. Anchorage units are accessories and must be ordered separately. More information BEGA Unidure®

Two-sided

The luminaires in our **Dark Sky** range direct their light onto the surface to be illuminated with high efficiency, while emitting less than 1% of their luminaire luminous flux into the upper half-space of the luminaire.

bega.com/darksky

Intuitive configuration via app

The garden and pathway luminaires with an integrated passive infrared motion and light sensor are extremely easy to configure via Bluetooth and the free app BEGA Smart.

After sunset and when motion is detected, additional luminaires that are networked via BEGA Smart (for example the matching garden and pathway luminaires without sensors) can be controlled. Alternatively, other luminaires can be controlled via the integrated relay output.

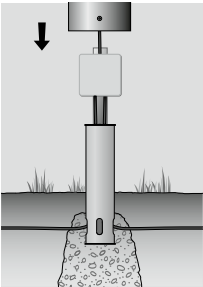

Find out more at bega.com/smart

Installation options for the permanent installation of BEGA garden and pathway luminaires

Anchorage unit

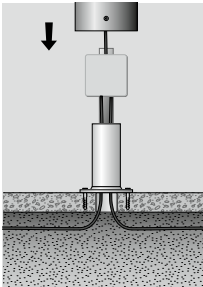

For the permanent installation of BEGA garden and pathway luminaires in a **flowerbed or an unpaved surface**, for example.

The anchorage unit made of hot-dip galvanised steel is included in the scope of delivery of the luminaire. With this type of installation, the underground cable is threaded into the anchorage unit via the lateral cable entry. Ensure that the anchorage unit is vertical and firmly secured depending on the type of substrate and intended use. The luminaire is then connected, placed on the anchorage unit and bolted in position.

Screw-on base

For the permanent installation of BEGA garden and pathway luminaires on foundations **provided by the customer or on other paved surfaces**.

A screw-on base made of hot-dip galvanised steel is included in the scope of delivery of the luminaire. With this type of installation, an underground cable is routed into the screw-on base from below. The screw-on base is bolted onto the mounting surface. The luminaire is then connected with a line connector and fixed to the screw-on base.

Garden and pathway luminaires

Unshielded · Light emission 360°
Optionally with PIR motion and light sensor

Protection class IP 65 · Cast aluminium and aluminium · Opal glass with thread · BEGA Thermal Management®
The luminaires are suitable for through-wiring.
Delivery includes either an anchorage unit or a screw-on base.

Luminaires with LED module: Configuration and control via BEGA Smart
BEGA Smart controllable luminaires can be networked, switched, dimmed and adjusted to a colour temperature of 3000 K or 4000 K. Luminaires with PIR sensor can also automatically control other luminaires that are networked via BEGA Smart after sunset and when motion is detected. Alternatively, other luminaires can be controlled via the integrated relay output.

Installation options for the permanent installation of BEGA garden and pathway luminaires

Anchorage unit

For installations in e.g. a flower bed or in unpaved ground.

With this type of installation, an underground cable is routed into the anchorage unit from below. The underground cable and anchorage unit are set in concrete. The luminaire is then connected, placed on the anchorage unit and bolted in position.

Screw-on base

For an installation on e.g. an on-site foundation or other paved area.

With this type of installation, the underground cable is routed into the screw-on base from below. The socket is bolted onto the mounting surface. The luminaire is then connected with a line connector and fixed to the screw-on base. In some model series, a supplied cover plate between the vertical luminaire tube and the screw-on base covers the mounting screws.

BEGA UniLink® · Garden luminaires for private use

BEGA UniLink® is the flexible way to brighten up your garden. All you need is one available outdoor socket and BEGA UniLink®. Simply plug in, position the luminaires and off you go.

Every BEGA UniLink® luminaire is equipped with a five-metre-long connecting cable with a waterproof plug connector. You can connect the individual luminaire to an outdoor socket in no time at all using the matching country-specific mains plug.

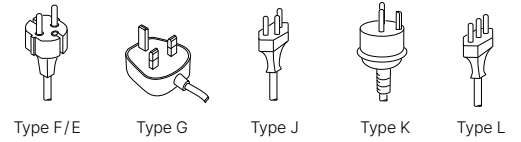

Thanks to the sophisticated distribution box system, you can connect up to five BEGA UniLink® luminaires with a single power connection and position each individual luminaire freely in the garden within a range of up to 50 metres. You can add more distribution boxes to connect additional luminaires.

BEGA UniLink® Play · Garden luminaires for private use

BEGA UniLink® Play includes small-format floodlights and pathway luminaires – including matching extension leads. **This requires a BEGA UniLink® Play power supply unit, which provides a safe 48-volt operating voltage.** An integration into BEGA Smart using BEGA Smart Link allows individual control and automation of these luminaires. RGBW floodlights create coloured light in the garden and require no additional control components.

BEGA UniLink® Play can extend an existing BEGA UniLink® installation or be used as a stand-alone system.

BEGA UniLink® Play system components

To connect a BEGA UniLink® Play power supply unit to the power network, it is necessary to have at least one BEGA UniLink® mains plug or a BEGA UniLink® connecting cable with free cable ends – see Page 211.

Requirement:
48 V power supply

BEGA UniLink® Play
PSU

Protection class IP 67
Input voltage: 230 V AC 50/60 Hz
Output voltage: 48 V DC, 0–100 W

Multiple single luminaires can be operated with one power supply unit – provided the total output does not exceed the maximum output of the power supply unit of 100 watts.

Input: BEGA UniLink® plug · Output: BEGA UniLink® Play socket

Please note:
Connecting a BEGA UniLink® Play luminaire requires a power supply unit, which must be ordered separately. Multiple single luminaires can be operated with one power supply unit – provided the total output does not exceed the maximum output of the power supply unit.
If you want to control the BEGA UniLink® Play luminaires, they can be integrated in the BEGA Smart System with the BEGA Smart Link and controlled via app, remote control or automations.

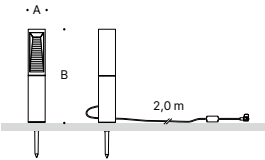

For more information see Page 219

Connecting pillars for the electrical power supply
For private sectors

BEGA connecting pillars with safety sockets are perfect for the private garden and offer connection options for luminaires and electrical devices. They are available ready for connection with installation inserts.

Controllable connecting pillars enable smart control of your garden system via DALI or using the free BEGA Smart app. In this case, both luminaires and other devices with safety plug can be integrated into the system.

The installation must be carried out by a certified electrician. For the installation and operation of these devices, national safety regulations must be complied with.

Connecting pillars
for electrical supply **in the private sector**

- with two or three safety sockets
- optionally with type F, type E or type G safety sockets

We can supply the connecting pillars

- with earth spike
- with anchorage section
- with screw-on base

Type **F**: system common in Germany and Europe

Type **E**: system common in France and Belgium

Type **G**: system common in the UK ("Commonwealth plug")

You can find an overview of all type designations for sockets on Page 448.

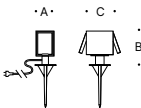

Protection class IP 44 · Aluminium

Glass-fibre reinforced synthetic material · Line connector 3 × 2,5

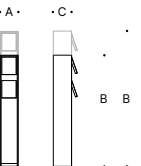

Portable connecting pillars: ready for connection with 5 m cable and mains plug

Housing colour · BEGA Unidure® · Graphite

If through-wiring to a further connecting pillar is required, we recommend using BEGA Distribution boxes. For more information about BEGA Distribution boxes, see Page 446.

Connecting pillars for the electrical supply in public and industrial areas

The connecting pillars on this double page are suitable for the connection of electrically operated devices as well as for power supply in public and commercial facilities.
We supply these connecting pillars ready for connection with or without installation inserts and the option of freely selecting the type and number of installation inserts for relevant requirements.
The installation must be carried out by a certified electrician. National safety regulations must be observed when installing and operating these devices.

Optimal installation convenience thanks to cable entry for up to 3 cables up to Ø16 mm, max. 6°

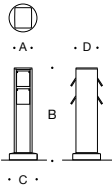

Connecting pillars for the electrical supply in public and commercial areas

Connecting pillars **with installation inserts** are supplied ready for connection and fully wired.
Connecting pillars **without installation inserts** offer you the option of choosing the type and number of installation inserts for your particular requirements.
These connecting pillars are then supplied empty together with the inserts ordered.
Installation inserts for these connecting pillars can be found on this page.

Blind covers must be ordered separately.

The BEGA connecting pillars in this series are bolted with a mounting plate onto a foundation created on-site or onto an anchorage unit made of hot-dip galvanised steel. Anchorage units are accessories and must be ordered separately.
For more information about BEGA anchorage units, see Page 447.

Protection class IP 44 · Aluminium

Intelligent charging units for electric vehicles

The main challenge for future mobility is the comprehensive expansion of charging points for electric vehicles without impairing the cityscape or commercial and private areas with space-consuming charging stations.

The BEGA charging units can be integrated into bollard tubes, light building elements and in luminaire poles or attached to existing luminaire poles at a later time. Solo charging units for floor or wall mounting are also available.

bega.com/e-mobility

Nationwide

Our charging units can be integrated into existing infrastructure to create a nationwide network for e-vehicles.

Future-proof

The design of our charging units incorporates decades of experience and know-how. Our charging units are robust and weather-proof.

Legally compliant

BEGA charging units combine precision and future viability: They are compliant with calibration regulations and also meet the requirements of the current Alternative Fuels Infrastructure Regulation (AFIR).

Compatible

The BEGA charging units are characterised by their compatibility with the established Open Charge Point Protocol (OCPP 1.6), a central communication standard for the backend systems of electric vehicle charging stations.

* The figure shows a system bollard tube with charging module insert in combination with a bollard head to be ordered separately

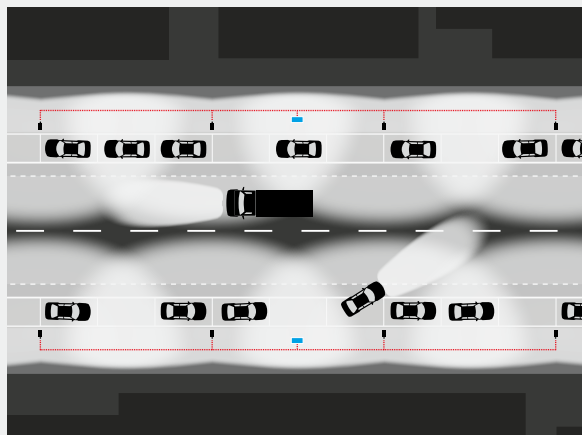

Application in semi-public areas

BEGA charging units for electric vehicles integrated in luminaires are the solution for semi-public areas – for example a company car park. The existing infrastructure can be used to supply the vehicle fleet with enough charging stations. Straightforward user authorisation is accomplished using corresponding activation cards, for example.

Application in public areas

This is how to achieve fast and nationwide expansion of charging stations for electric vehicles in public areas: The charging units can be integrated into previously existing light points, for instance on streets with parking bays. BEGA charging units can be connected with typical commercial systems using OCPP 1.6.

BEGA System light building elements · Overview

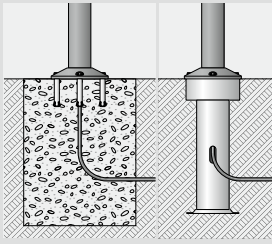

The BEGA System light building elements allow the combination of various light building element heads with light building element tubes of various materials and with integrated floodlights or charging units for electric vehicles.

To plan your lighting system, first select a light building element head with your desired light distribution. When choosing a light

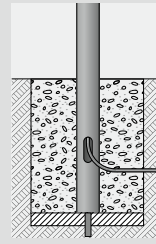

building element tube, you select the material, any additional functions and the design of the base.

For the light building element tubes, you can choose between tubes made of painted aluminium or laminated wood and aluminium. Both versions are available with either an anchorage section or a base plate.

Light building element tubes with base plate are bolted directly to an existing foundation on the building structure or to an anchorage unit, made of hot-dip galvanised steel. For installation on a foundation created on-site, suitable installation material must also be created on-site. Anchorage units are accessories and must be ordered separately. For more information, see Page 447.

Light building element tubes with an anchorage section are installed directly in the ground.

Power reduction accessories for luminaires with a DALI interface can be found on Page 433. The technical data for the connection boxes can be found on Page 449.

BEGA Light building element tubes for system light building elements

On this Page, you will find all light building element tubes for the system light building elements listed on Pages 234 to 235. The short description on this Page offers a compact overview of the light building element tubes and their functions. A detailed technical description can be found in the data sheets and instructions for use on our website. Our light building element tubes are optionally available with either a base plate or an anchorage section.

Simply order the luminaire head and your preferred light building element tube to go with it. Both modules can be connected quickly and easily during the installation.

BEGA System light building elements

Symmetrical light distribution · Optionally with Zhaga interface

Protection class IP 65 · Cast aluminium · Clear synthetic cover
Reflector surface made of pure aluminium · DALI controllable power supply units · BEGA Thermal Management®
These luminaires emit no light into the upper half-space of the luminaires.

Simply order the light building element head and additionally your preferred light building element tube.
The two modules can be quickly and easily connected to one another during installation.
For more information about all light building element tubes, see Page 233.

The luminaires 85 030 and 85 031 come equipped with one Zhaga interface as per Zhaga Book 18 Ed. 3.0.

System light building elements with BEGA BugSaver® technology can be switched from warm white light with a colour temperature of 3000K to light with highly reduced blue light portion to protect nocturnal insects. This phosphor-converted amber has a colour temperature of around 1800K and is considered to be particularly insect-friendly. The system is controlled via DALI DT8 – you can find suitable control devices on Page 433.

Profile poles

For installing up to eight BEGA floodlights

BEGA profile poles provide the perfect solution for a wide range of lighting applications with directed light from a single location. Two floodlights fit into each profile groove on the pole. Up to eight floodlights with different outputs and half beam angles can therefore be arranged for the desired illumination.

The poles are available with either cylindrical or square cross-sections in heights of 4000 and 6000 millimetres.

The poles can either be installed by means of an anchorage unit or a screw-on base.

For more information about BEGA anchorage units and screw-on bases, see Pages 446 to 447.

We manufacture profile poles with laminated wood from finger-jointed pine slats. Their static characteristic values and strength classes meet the requirements of DIN EN 14080.

The use of high-quality aluminium at the base of the pole means the wood has no direct contact with the ground.

The BEGA Coating Technology® used on the aluminium parts also ensures maximum protection in this critical area.

The technical data for the matching floodlights can be found on Pages 238 to 239.

Cylindrical profile poles

for installing up to eight BEGA floodlights

Optionally

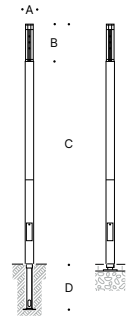

- Profile pole made of lacquered aluminium
- Profile pole with laminated wood in accordance with DIN EN 14080

Poles in arch or S shape
for the installation of BEGA floodlights with G½" threaded connection · ISO 228

These poles provide the perfect solution for a wide range of lighting applications with directed light from a single location with up to four floodlights.

The poles are available in two arched shapes with a height of 6000 millimetres and are fixed into the ground using an integrated anchorage section.

The poles are compatible with BEGA floodlights with G½" connecting thread · ISO 228, which do not exceed a weight of 5 kg per floodlight.

The maximum permitted wind catching area is 0.06 m² per floodlight.

You can find more information about this data in the data sheets for the floodlights on our website. Choose the pole colour and define the positions of the mounting points on your order form.

More technical information can be found on our website.

Compact floodlights

Performance floodlights

These luminaires of our **Dark Sky** series direct their light onto the illuminated area with high efficiency. Less than 1% of the light is emitted at all into the upper half-space of the luminaire.

bega.com/darksky

We have developed luminaires with **BEGA BugSaver®** technology for efficient illumination in urban and natural environments. This system allows a switch-over to amber light, which is far less attractive to insects.

bega.com/bug saver

Light building elements

Asymmetrical and asymmetrical flat beam light distribution

Protection class IP 65 · Cast aluminium and aluminium · Safety glass
 Reflector made of pure anodised aluminium · BEGA Constant Optics®
 BEGA Ultimate Driver® · DALI controllable · BEGA Thermal Management®
 Luminaires with BugSaver® technology: DALI DT8 TW controllable
 Connection box 71084

These luminaires emit less than 1% of the light into the upper half-space of the luminaires.

Power reduction accessories for luminaires with a DALI interface can be found on Page 433.
 Technical data for connection boxes can be found on Page 449.

BEGA Light building elements from this series are secured in the ground by means of an anchor-
 age unit or bolted onto an on-site foundation by means of a screw-on base.
 Please order anchorage units and screw-on bases separately as accessories.
 For more information about BEGA anchorage units and screw-on bases, see Pages 446 to 447.

Luminaires with BEGA BugSaver® technology can be switched from warm white light with
 a colour temperature of 3000K to light with highly reduced blue light portion to protect
 nocturnal insects. This phosphor-converted amber has a colour temperature of around 1800K
 and is considered to be particularly insect-friendly. Our control devices can be used to achieve
 additional power reduction, see Page 433.

The Light building elements with a height of 2500 millimetres are designed specifically for smaller urban spaces. They create a third “light plane” between bollards and light building elements with a height of 4000 to 5500 millimetres. Here, they are more eye-catching, as they come closer to the human field of vision.

BEGA pole-top luminaires · Overview

Pole-top luminaires offer a range of four different basic light distributions. Unshielded luminaires are characterised by uniformly soft light distribution. Luminaires with a symmetrical light distribution illuminate a rotationally symmetrical cone around the luminaire. Asymmetrical light covers a larger area in front of the luminaire and extends deeper into the space. Luminaires with asymmetrical flat beam light distribution, which project a flat, elongated oval in front of the luminaire, are particularly suited for illumination of streets in accordance with DIN 13201.

Outrigger luminaires shift the light point of the luminaire by the length of the outrigger arm – side-mounted pole-top luminaires are used for installation on existing outrigger arms.

Some of our pole-top luminaires offer Zhaga interfaces (Book 18 Ed 3.0): for motion and light sensors as well as for communication interfaces. You will find suitable components on Page 448.

Luminaire poles

On the pages of the pole-top luminaires, we indicate the pole heights for which each luminaire is suitable. The connecting cables of the luminaires must be measured accordingly for these pole heights. The right composition between luminaire pole and pole-top luminaire depends on the matching top diameter and your personal taste – we recommend a harmonious design combination on the relevant luminaire pages. We supply poles in the same colour as the ordered luminaires.

Additional technical information, particularly structural specifications, can be found in the product data sheets on our website.

Matching light poles can be found on Pages 296 to 307.

Luminaires with Zhaga interface

Luminaires with **interface Zhaga book 18 Ed. 3.0** enable the integration of motion and light sensors as well as communication modules.

You will find suitable components on Page 427.

The luminaires in our **Dark Sky** range direct their light onto the surface to be illuminated with high efficiency, while emitting less than 1% of their luminaire luminous flux into the upper half-space of the luminaire.

bega.com/darksky

We have developed luminaires with **BEGA BugSaver®** technology for efficient illumination in urban and natural environments. This system allows a switch-over to amber light, which is far less attractive to insects.

Luminaires with BEGA BugSaver® technology can be switched from warm white light with a colour temperature of 3000K to light with highly reduced blue light portion to protect nocturnal insects. This phosphor-converted amber has a colour temperature of around 1800K and is considered to be particularly insect-friendly. Our control devices can be used to achieve additional power reduction, see Page 433.

Some luminaires come equipped with two Zhaga interfaces as per Zhaga Book 18 Ed. 3.0.

Zhaga modules are not included in the delivery.

In the table, we recommend BEGA luminaire poles that match the finish and colour, as well as the design and statics of the pole-top luminaires in this series. The complete overview and technical data for all BEGA luminaire poles can be found on Pages 296 to 307.

You can find BEGA anchorage units and connection boxes on Pages 447 to 449.

Colour temperature: 3000K – article number + **K3** or 4000K – article number + **K4**

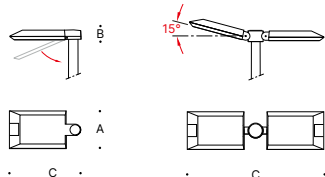

Luminaires with BEGA BugSaver® technology can be switched from warm white light with a colour temperature of 3000K to light with highly reduced blue light portion to protect nocturnal insects. This phosphor-converted amber has a colour temperature of around 1800K and is considered to be particularly insect-friendly. Our control devices can be used to achieve additional power reduction, see Page 433.

The Collection BOOM

The Collection BOOM presents an exclusive selection of luminaires handcrafted from copper, cast bronze, brass, cast aluminium and hand-blown glass.

Stylish luminaires which impress not only by their high-quality materials and workmanship but also by their modern lighting technology. Carefully coordinated with a building's overall architecture, they help to complement sophisticated buildings and historical architecture.

The design and construction of many of our luminaires are reminiscent of the materials and processing techniques of past times and result in a distinctive product. Copper and cast bronze are among the oldest materials known to man. These materials are especially important to us because they are highly resistant to corrosion and sea-water, and very resistant to wear and tear.

Over time, the elements cause copper, cast bronze and brass to change their appearance. A distinctive patina forms on the surface. The result is a material with a uniquely aesthetic aura. Copper and bronze stand for durability and lasting value. They are timeless. Aluminium and cast aluminium parts are pre-treated and powder-coated with our BEGA Unidure® technology to fulfil the highest standards in weathering and light stability.

BEGA luminaire poles · Overview

Luminaire poles for our pole-top luminaires are available in a wide variety of materials and styles and meet the highest standards for weather-resistance and light stability worldwide. The right composition between luminaire pole and pole-top luminaire depends on the desired mounting height, the matching top diameter and your personal taste.

We recommend a harmonious design combination on the pages featuring pole-top luminaires. We supply poles in the same colour as the ordered luminaires. On request, you can also obtain luminaire poles with RAL texture and DB colours. Additional technical information, particularly structural specifications, can be found in the product data sheets on our website.

BEGA luminaire poles are available with two different mounting systems. In the system with a base plate, the pole is mounted on an on-site foundation or on a separate anchorage section that was previously anchored in the ground.

In the system with the anchorage section on the other hand, the bottom section of the pole is anchored directly into the ground. For both systems, the structural conditions must be considered.

Cylindrical aluminium luminaire poles with base plate and stepped pole base in accordance with DIN EN 40 with painted finish

Luminaire poles with base plate are mounted on a foundation or anchorage unit.

These luminaire poles with door are equipped with a C-clamp to accommodate a connection box and a PE conductor connection. Matching connection boxes for each application are listed in the table. For more information about BEGA connection boxes, see Page 449.

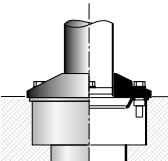

We supply all luminaire poles in the colour of the luminaires ordered. If no colour is specified, we deliver the poles in the colour graphite. All standard colours feature our BEGA Unidure® coating technology and meet the highest global standards of weathering and light stability.

On request, poles can also be supplied in RAL textures and DB colours at the catalogue price.

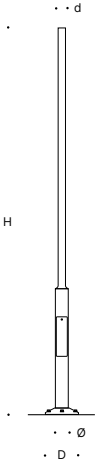

20-year availability guarantee for replacements

Indoor luminaires

BEGA has been developing and producing high-quality luminaires for virtually all areas of interior and exterior architecture for more than 80 years. During that time, products were created that have become generic terms for countless luminaire types in the entire industry for their design and branding.

For a long time, our fascination with glass and its countless facets was the driving force behind the development and design work on our indoor luminaires. Being able to rely on our own glass production facilities remains an invaluable advantage for us. Today, LED technology offers us endless possibilities for creative development. Here as well, our own premium standard module production has created the independence required for our work. In our development process, our main focus has always been on our products retaining their value for a long time to come. That is how we have been able to save valuable resources with our responsible and intelligent use of raw materials. Durability and sustainability have been and will always be part of our company ethos.

The following section of the full product range provides you with an overview of all BEGA indoor luminaires and all the most important data at a glance.

You will find detailed technical data for all products on our website.

This summary of our recessed wall luminaires, recessed ceiling luminaires and downlights for indoors provides a compact overview of all the important product data. It enables you to find the right series quickly and compare products easily.

The ACCENTA series is ideal as recessed wall luminaires for standard cavity boxes or for recessed installation in ceilings with 68 mm cut-outs. With its efficient technology, the series is a reliable solution for a variety of uses.

For applications where the focus is on cost efficiency and reliable technology, the PRIMA series was developed. The STUDIO LINE is characterised by unmistakeable designs that create a sophisticated and pleasant lighting atmosphere.

Current values and other technical data can be found in the product data sheet of each individual luminaire on our website. The required installation depths can be found in the instructions for use for these luminaires. Please take this into account as early as the planning stage.

The next-generation glare suppression technology used in the recessed ceiling luminaire shown here offers exceptional visual comfort and sets new illumination standards. The sophisticated conical mesh texture ensures lateral glare suppression even at near level view angles.

For matching surface-mounted ceiling luminaires, see Page 335

Please refer to the technical planning data for planning and installation. The current values for LED service life, luminous flux and maximum ambient temperature are available at all times in the instructions for use and data sheets on our website.

BEGA Hybrid Optics®

**Ceiling luminaires · Downlights**

Symmetrical narrow beam, symmetrical wide beam, symmetrical very wide beam, asymmetrical wide beam light distribution or Zoom optics with adjustable light distribution

Luminaire housing made of cast aluminium available with a choice of 2 finishes

Reflector surface made of pure aluminium · Safety glass · Chrome trim ring

We can also deliver the chrome trim rings in the exterior colour on request.

Luminaires with adjustable zoom optics:

Half beam angle adjustable between 14° and 60° by turning the lens unit

Optical diffuser filters for modifying the light distribution · Velvet White or Velvet Black trim ring on/off or DALI controllable power supply units · BEGA Thermal Management®

Luminaires in the PRIMA series are designed for all applications requiring reliable technology and high cost efficiency. Luminaires for universal use. Compact, economical and versatile – with durable LED technology. Luminaires with satin matt, hand-blown opal glass or impact-resistant, translucent white synthetic cover.

These luminaires are optionally available: for on/off operation, DALI controllable and with motion sensor.

Without trim frame

Unshielded cylinder with additional downlight and optional light emission upwards or RGBW

Metal fitting and canopy colour white · Three-ply opal glass · Safety glass
Reflector made of pure anodised aluminium · Silicone diffusing lens · BEGA Constant Optics®
Cable pendant colour white · Special lengths on request
DALI controllable power supply units · BEGA Thermal Management®

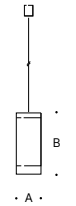

The RGBW luminaires can be controlled via a DALI colour light control (DT8, RGBWAF, xy).
For the technical data of DALI system components, see Pages 428 to 433.

In the pendant luminaires, the unshielded and downward-directed part of the light, and the upward-directed part of the light in the version with additional upward light, can be controlled individually.
The downward-directed light of the downlight will always be either 3000K or 4000K.

BEGA System pendant luminaires · Installation components

As a modular system, BEGA System pendant luminaires allow you to combine pendant luminaires with various installation components.

The electrical connection and suspension of a pendant luminaire on the ceiling are usually done under a canopy. Apart from providing safety-relevant protection against contact voltage, this also conceals the suspension and cable connection.

Depending on architectural conditions, pendant luminaires may have to be installed in a variety of ceiling structures.

For example, the electrical connection and suspension may have to be integrated into a suspended ceiling. Other ceiling types, where pendant luminaires may have to be mounted and installed, include vaulted, slanted, or ceilings with track systems.

Installation components

Surface-mounted canopy for straight ceilings

Type A

For the electrical installation and mounting of a BEGA System pendant luminaire on any type of ceiling.

Velvet White	Velvet Black
13 229	13 228
13 238	13 237
13 241	13 240
13 245	13 239
13 255	13 251
13 257	13 256
13 327	13 328
13 346	13 347

Type AS · Smart

Identical in design to Type A, but with built-in Smart DALI Controller for wireless control of the luminaire using BEGA Smart.

Velvet White	Velvet Black
13 227	13 265
13 266	13 267
13 276	13 270
13 282	13 281
13 329	13 330

Surface-mounted canopy for straight and sloped ceilings

Type B

For the mounting and electrical installation of BEGA System pendant luminaires on all types of sloped and flat ceilings. Suitable for slanted ceilings with a pitch of 0–40°.

Velvet White	Velvet Black
13 232	13 231
13 244	13 243
13 247	13 246
13 259	13 258
13 331	13 332
13 350	13 351

Type BS · Smart

Structurally identical to type B, but with built-in Smart DALI Controller for the wireless control of the luminaire using BEGA Smart.

Velvet White	Velvet Black
13 269	13 268

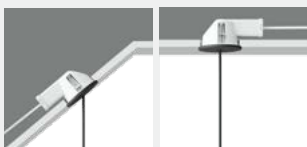

With BEGA System pendant luminaires, you simply order the appropriate installation components for your desired type of installation.

Please take note of the technical data of the system pendant luminaires and installation components when planning. All relevant instructions for use can be found on our website.

20-year availability guarantee for replacement parts and LED modules

We can also supply these luminaires with a combination of various chandelier diameters as custom-made products.

Chandeliers with three-ply opal glass

The light is distributed evenly and softly upwards and downwards in the room. The frosted, hand-blown luminaire glass with long cylindrical luminaire bodies provides a pleasant, uniform brightness and a light ambiance that is reminiscent of festively illuminated rooms.

Opal glass · Reflector made of pure anodised aluminium · BEGA Constant Optics®

	LED		Controllable	Cylinder	A	B	L
50 880.1	120.0 W	9540 lm	DALI	6×Ø 120	1550	645	4000

50 882.1	240.0 W	19080 lm	DALI	12×Ø 120	3000	645	6000

Chandeliers with partially frosted, thick-walled crystal glass

Built-in reflectors deflect the light upwards and downwards into the room in a very wide beam. The handcrafted crystal glass is a key component of the luminaire's festive appearance and creates a brilliant, multi-faceted play of light.

Crystal glass · Reflector made of pure anodised aluminium · BEGA Constant Optics®

	LED		Controllable	Cylinder	A	B	L
50 883.1	120.0 W	10280 lm	DALI	6×Ø 120	1550	345	4000

50 885.1	240.0 W	20555 lm	DALI	12×Ø 120	3000	345	6000

Chandeliers with BEGA Hybrid Optics®

Downlights with very wide beam light distribution. These optics take advantage of the benefits of lens and reflector technology.

The result is highly efficient, low-loss optical systems with optimum glare suppression and very compact dimensions. Chandeliers with this lighting technology stand out due to their very high luminous efficiency and the excellent quality of their lighting.

Safety glass · Reflector surface made of pure aluminium · BEGA Hybrid Optics®

Accessories light control

Our flexible and innovative light control solutions enable you to efficiently and conveniently control lighting systems of any size. Whether smart light control for your home, cloud-based control for large installations or integration in comprehensive building automation systems: BEGA networks light with architecture and technology to create intelligent, sustainable and future-proof solutions.

Here you will find further information on our BEGA Smart, wibutler and BEGA Connect lighting control solutions and our portfolio of system components for DALI.

BEGA Smart

BEGA Smart was developed specifically for everyday use. For a home where everything is easy. Smart means uncomplicated. That is why all devices and functions are programmed and controlled simply, intuitively and clearly in a single place: the BEGA Smart app. Control individual luminaires or luminaire groups, configure custom lighting scenarios or set up a time switch function – smart BEGA lights are incredibly versatile. They combine comfort, safety and energy efficiency.

Smart Rotary Dimmer for installation in flush-mounted device boxes

Wireless rotary dimmer with integrated aerial for switching, dimming and regulating the light colour of luminaires.
The Smart Rotary Dimmer can be used in conjunction with most brand-name switch programs.

Mains voltage 220–240 V ~ 50/60 Hz
Zigbee 3.0 · Max. radio range 30 m

	A	B
71 148 Smart Rotary Dimmer	70	48

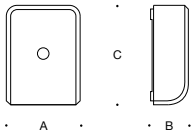

High-frequency motion and light sensor for wall mounting

The high-frequency motion and light sensor for wall mounting outdoors detect motion and environmental brightness and wirelessly controls your BEGA Smart System via radio.

The sensor can be configured using the BEGA Smart app, and networked with additional sensors, devices and luminaires. The sensor enables automated control of these devices.

Protection class IP 64
Colour graphite
Mains voltage 220–240 V ~ 50/60 Hz
Zigbee 3.0 · Max. radio range 30 m

	A	B	C
71 362 HF motion and light sensor	102	51	139

Zigbee-Router module for installation in device boxes

The Zigbee router module is used to route radio signals in expansive buildings, for example and thus enables a greater range.

Integrated 2.4 GHz aerial
Compatible with BEGA Smart
Power supply 220–240 V ~ 50 Hz

	A	B
71 055 Zigbee router module	47	12

Pushbutton and switch module for installation in device boxes

For up to four potential-free pushbuttons or switches for switching, dimming, adjusting the light colour and calling up scenarios. The module controls your BEGA Smart system wirelessly and can be configured using the BEGA Smart app.

It can be networked with additional devices and luminaires to enable their manual control. Pushbuttons and switches of many brand-name switch programs are compatible.

Mains voltage 220–240 V ~ 50/60 Hz
Zigbee 3.0 · Max. radio range 30 m

	A	B
71 152 Pushbutton and switch module	50	23

Smart DALI Controller

The Smart DALI controller upgrades existing electrical installations by allowing control of DALI luminaires on a three-core cable via BEGA Smart.

National safety regulations must be observed when installing in suspended ceilings.

Mains voltage 220–240 V ~ 0/50-60 Hz
Zigbee 3.0 · Max. radio range 30 m

	A	B	C
71 149 Smart DALI Controller	70	46	29

Zigbee DALI-control module for installation in device boxes

DALI control output for joint switching and dimming of up to five DALI operating devices.
Relay contact with a switching capacity of 2000 W / 1000 VA.

Integrated 2.4 GHz aerial
Can be used as router or coordinator in Zigbee networks.
Compatible with BEGA Smart

Power supply 220–240 V ~ 50/60 Hz
For installation in device boxes

	A	B
70 049 Zigbee control module · With DALI interface	50	31

Smart Plug

It couldn't be easier to make a home smart: The Smart Plug goes into the socket – done.
Each device with a safety plug can be quickly and easily incorporated into the home's BEGA Smart system and be easily controlled via smartphone or remote control.

Switch and control your devices with a Smart Plug.

Mains voltage 220–240 V ~ 50/60 Hz
Zigbee 3.0 · Max. radio range 30 m

71 190 Smart Plug type F	45	51	70

Luminaires for BEGA Smart

For BEGA system pendant luminaires, canopies with integrated smart DALI controller are available.

Pages 392 - 407

Zigbee lamps integrate E14 and E27 socket luminaires into BEGA Smart.

Pages 434 - 435

BEGA UniLink® Play luminaires can be integrated into BEGA Smart using the Smart Link.

Pages 210 - 221

Luminaires with a mains plug connected to Smart Socket connecting pillars can be controlled using BEGA Smart

Page 223

Smart luminaires with integrated wireless interface can be directly integrated into BEGA Smart. You can identify the relevant luminaires from the designation "BEGA Smart-controllable".

The **wibutler** platform is used for digital building control. Using wibutler pro, BEGA Smart components can be integrated into a Professional Smart Home alongside third party products – safe cloud access from anywhere is included.

Find out more at bega.com/wibutler

Open source for everyone – and safe

The wibutler OS offers a platform for digital building control. BEGA Smart components can easily be integrated into a Professional Smart Home alongside third party products using wibutler pro – safe cloud access from anywhere is included.

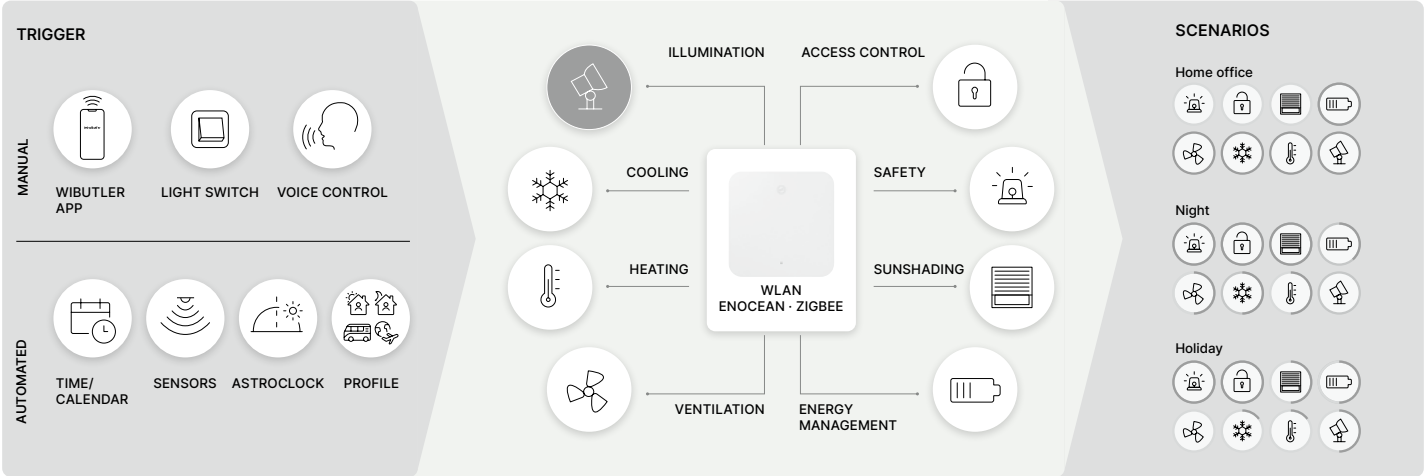

The cross-device control system allows easy operation of lighting systems, electronics, sensors, ventilation systems, heating systems, motorised awnings and roller shades and much more – all via one single app. It allows over 300 devices from more than 40 brands to be securely networked together.

Your advantages in combination with BEGA Smart products:

- Networking options with other devices and third-party products
- Control flexibility – by switch, voice command, smartphone ...
- wibutler is the central operating and control element for all home technology and offers easy system commissioning, clear navigation and all the options of an energy-efficient, convenient and safe Smart Home system
- Remote control of the entire system

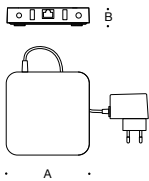

wibutler.com

wibutler pro 2

The wibutler system is connected with the Internet and establishes the connection between the paired components and the wibutler cloud.
Commissioning and control are carried out via compatible end devices with the wibutler app for iOS and Android.

Radio standards EnOcean, Zigbee 3.0, WLAN
Plug-in power supply unit 100–240 V, 50/60 Hz · Ethernet · 2 × USB 2.0

BEGA Connect

BEGA Connect opens up countless possibilities for you to use smart light to showcase both smaller lighting installations and large illumination projects. Online and without DALI expertise. Wherever you are: It allows you to control, plan and monitor individual luminaires via a browser or the modern and intuitive app from any location.

Find out more at connect.bega.com

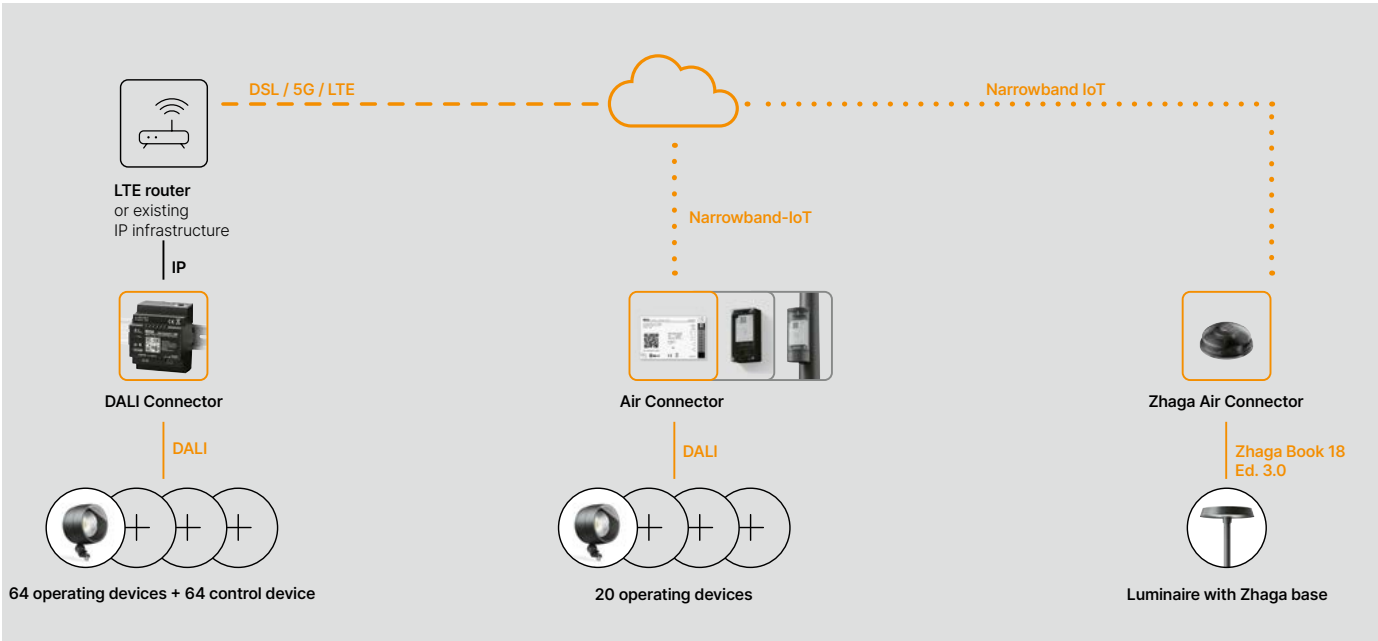

Your path to the cloud

All you need in order to benefit from the possibilities offered by intelligent cloud-based lighting control is a connector to serve as an interface between your local installation and the BEGA Connect Cloud.

The only requirement is access to the internet: provided either via the local network (LAN or Wi-Fi) or, in the case of the Air Connector and Zhaga Air Connector, by means of the integrated internet connection via narrowband IoT.

We offer the right connector for every application. Maintain an overview even with large installations thanks to cloud clustering of multiple connectors.

The DALI Connector:
makes complex things simple.

Integrate your lighting system into the existing IP infrastructure with the DALI Connector. Connection to the BEGA Connect Cloud is established via Ethernet or WLAN.

The Air Connector:
instantly online, no matter the location.

The Air Connector provides an internet connection via narrowband IoT – even in places where an online connection is hard to come by: in the most remote locations and behind thick walls. The Air Connector is available individually, in a housing for wall mounting or for installation on a pole.

The online upgrade:
Zhaga Air Connector.

Luminaires with Zhaga Book 18 Ed. 3.0 interface connect directly with the BEGA Connect cloud via the Zhaga Air Connector – including Internet connection thanks to Narrowband IoT. Each individual light point can be controlled in a combined system.

With just one connector and the BEGA Connect app, you can control your DALI lighting installation as simply and with as much flexibility as never before. No DALI expertise required, no unnecessary complications and no additional components. With BEGA Connect, all DALI luminaires can be conveniently networked, configured, controlled and managed in a single system using remote access via PC, tablet or smartphone.

Air Connector for installation in a protected connection compartment

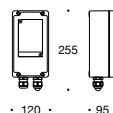

Protection class IP 20
DALI power supply integrated, 100 mA
For controlling up to 20 DALI operating devices
Integrated mobile radio connection via narrowband IoT

71 298 Air Connector for installation in a protected connection compartment

Air Connector in a housing for wall mounting

Protection class IP 66
Glass-fibre reinforced synthetic material · 2 cable entries
DALI power supply integrated, 100 mA
For controlling up to 20 DALI operating devices
Integrated mobile radio connection via narrowband IoT

The illustration shows parts of the black housing as transparent for better clarification of the system.

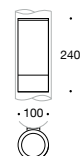

71 262 Air Connector in a housing for wall mounting

Air Connector in a housing for installation on a pole

Protection class IP 65 · Cast aluminium · Synthetic material
6 m connecting cable with free cable ends
DALI power supply integrated, 100 mA
For controlling up to 20 DALI operating devices
Integrated mobile radio connection via narrowband IoT

Luminaire colour · BEGA Unidure®

71 297 Air Connector in a housing for installation on a pole

Zhaga Air Connector for direct installation on a luminaire

Protection class IP 66
Synthetic material · Installation via Zhaga Book 18 Ed 3.0 interface
Power supply via DALI-2 power supply unit (DiiA 150) in the luminaire
For controlling an individual luminaire

71 210 Zhaga Air Connector for direct installation on a luminaire

DALI-2 Zhaga motion and light sensor for direct installation on a luminaire

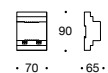

Protection class IP 66
Synthetic material · Installation via downward-directed Zhaga Book 18 Ed 3.0 interface
The passive infrared motion and light sensor reacts to thermal radiation, switching to account for the environmental brightness when people or animals move in its vicinity.
In combination with Zhaga Air Connector, ideally suited for street illumination with mounting heights between 4000–8000 mm
Power supply via DALI-2 power supply unit (DiiA 150) in the luminaire

71 328 DALI-2 Zhaga motion and light sensor

DALI connector for DIN rail mounting

Integrated DALI power supply, 250 mA
For controlling up to 64 DALI operating devices and 64 control devices compliant with DALI-2 standard

71 209 DALI connector for DIN rail mounting

DALI system components

DALI is the industry standard for professional light control indoors and outdoors, and also for seamless integration in parent control systems via gateways.
The configuration is performed using either the DALI Cockpit software (free download from our website) or the free BEGA Tool app, with which the DALI luminaires can very easily be configured by smartphone via BEGA Bluetooth DALI gateway or using the DALI programmer. The app allows you to create lighting scenarios and brightness controls as well as configure pushbuttons and sensors.

Find out more at bega.com/dali

DALI Cockpit

The free DALI Cockpit software for Windows PC enables professional management of a DALI line.
A DALI USB interface is required for the connection. This can be removed from the line after configuration has been completed.
The DALI system – luminaires, pushbuttons, sensors, etc. – is operated, addressed and configured using the software (defining groups, scenarios, dimming values, etc.). Apart from creating groups and scenarios as well as defining dimming values, individual DALI commands can be send manually, all communication can be monitored and various configuration can be saved and loaded.
Further information and free download at bega.com/dali-cockpit

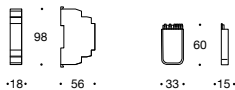

70866

71094

DALI power supply

For supplying DALI devices on a DALI line.
For DIN rail mounting and installation in device boxes

71 094 For installation in device boxes	30 mA

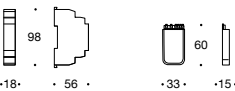

71054

71024

DALI USB interface

For connecting the DALI line to a Windows PC.
The configuration is performed using the DALI Cockpit software (free download from our website).
USB port · USB cable included in the delivery
For DIN rail mounting and installation in device boxes

71 054 For DIN rail mounting
71 024 For installation in device boxes

BEGA Tool App

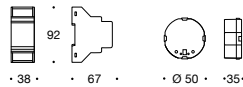

The BEGA Bluetooth DALI gateway enables wireless configuration of your DALI line using the free BEGA Tool app. Luminaires, pushbuttons and sensors can be operated, addressed and configured using the app. The definition of groups, scenarios, dimming values and other parameters is carried out conveniently by smartphone. The combination of power supply and Bluetooth in a single gateway eliminates the need for an additional interface module, and the system can be modified later at any time. BEGA Tool can also be used to configure the DALI programmer, which is able to rapidly set luminaires to pre-defined settings for example.

More information can be found at bega.com/tool

Bluetooth DALI gateway

For the commissioning and power supply of DALI operating devices and control components in a DALI line with max. 64 operating devices.

The configuration is performed using the free BEGA Tool app.

71 075 For DIN rail mounting

71 151 For installation in device boxes

71 075

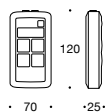

71 151

DALI programmer

DALI programmer for the parametrisation of DALI operating devices. Four buttons can be programmed with DALI parameters.

The configuration is performed using the free BEGA Tool app.

71 153 DALI programmer

DALI repeater

A one-off extension of the DALI line from 300 m to 600 m can be achieved using the DALI repeater. The repeater electrically isolates the bus devices (DS = DALI-SELV).

For max. 64 bus devices on the entire DALI line.

71038 A separate 24V DC power supply unit is required for the power supply.

71063 Cast aluminium housing · Protection class IP 65 · Safety class I
Integrated power supply 24V DC

DALI system components

**DALI-2 touch panel** for installation in device boxes

Multifunctional touch panels for manual control of LED, Tunable white and RGBW luminaires (DT6, DT8, RGBWAF).

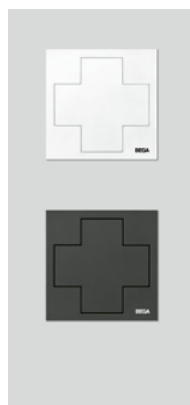

Colour white

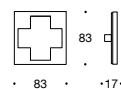

71 245 RGBW

71 250 Tunable white

71 251 Group control

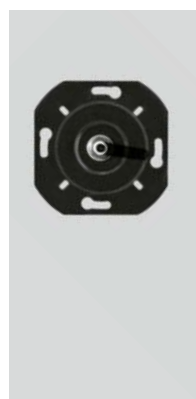

**DALI-2 cross switch** for installation in device boxes

Four pushbuttons for user-assignable functions. (Groups, lighting scenarios or staircase control) Suitable for manual control of LED and Tunable white luminaires (DT6, DT8).

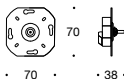

71 025 Cross switch · Colour **white**

71 056 Cross switch · Colour **black**

**DALI-2-rotary dimmer** for installation in device boxes

DALI rotary dimmer for adjusting the brightness of DALI luminaires and switching them on and off, for controlling Tunable white luminaires (DT8), RGB luminaires or RGBW luminaires (DT8). The dimmer can be used in conjunction with most brand-name switch programs.

71 129 Rotary dimmer

71 130 Rotary dimmer Tunable white

71 131 Rotary dimmer RGB

71 164 Rotary dimmer RGBW

**DALI-2-EnOcean pushbutton module**

For installation in device boxes

For the connection of max. four EnOcean pushbuttons

71 311 DALI-2 control module

**DALI-2 potential-free pushbutton and switch module**

For installation in device boxes

For up to four potential-free switches/pushbuttons/100 kΩ potentiometers with freely assignable function.

71 030 DALI-2 potential-free pushb. and switch module

**DALI-2-pushbutton and switch module 230V**

For installation in device boxes

For up to four 230V switches/pushbuttons with freely assignable function.

71 058 DALI-2 pushbutton and switch module 230V

**DALI daylight module** for installation in device boxes

For controlling Tunable white luminaires according to the time of day.

71 059 DALI daylight module

**DALI timer** for installation in device boxes

For timer functions with up to 28 events to call up lighting scenarios for LED, Tunable white and RGBW luminaires (DT6, DT8, RGBWAF, xy).

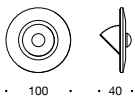

71 043 DALI timer

DALI sensors for indoor use

DALI sensors for detecting motion and brightness values.
For controlling DALI luminaires.
For installation in device boxes

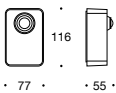

- 71 028 PIR motion and light sensor
- 71 029 Light sensor

DALI-2 PIR motion and light sensor for outdoors

The passive infrared motion and light sensor reacts to thermal radiation in the dark, switching on the connected luminaires/devices when people or animals move in its vicinity.
Protection class IP 65 · Cast aluminium
Rear cable entry
Colour graphite

- 71 162 DALI-2 PIR motion and light sensor

DALI-2 sequencer module

71 312 DALI-2 sequencer module for automated time-based progression of command sequences.
71 060 DALI sequencer module · For storing four independent sequences

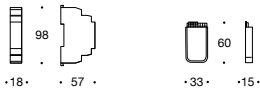

- 71 312 For DIN rail mounting
- 71 060 For installation in device boxes

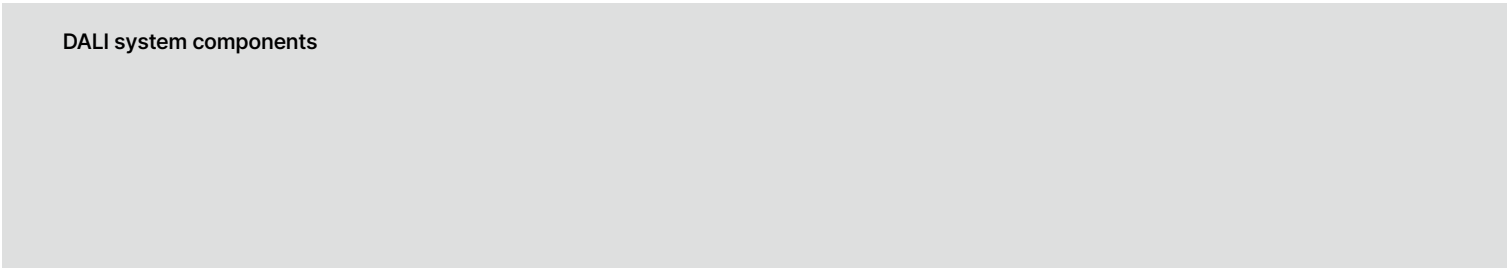

DALI-2 relay module

For controlling a relay contact via the DALI bus, e.g. for switching luminaires with an on/off power supply unit.

|---|-----------------|
| 71 116 For DIN rail mounting | 2000 W |
| 71 117 For installation in device boxes | 1000 W |

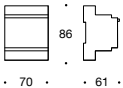

DALI system components

KNX-DALI-2 gateway for DIN rail mounting

IPAS KNX/DALI-2 gateway for the integration of up to 64 DALI operating devices in one KNX system. Parametrisation of 16 DALI groups, 16 DALI lighting scenarios and 16 sequences via application program in the ETS software.
The DALI colour light control of Tunable white and RGBW luminaires (DT 8, RGBWAF, xy) can also be achieved in this way.
A KNX learn button for toggling between normal mode and addressing mode, as well as three other buttons for device setting and configuration on the front panel.
Also suitable for operating single emergency lighting battery luminaires with DALI control in accordance with DIN EN 62386-202.

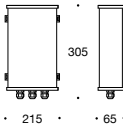

71 065 IPAS KNX-DALI-2 gateway

DALI operating devices for RGB in-ground luminaires 24V DC

DALI operating devices for RGB in-ground luminaires 24V DC
for max. 15 luminaires 33 291 · 88 897 or
for max. 6 luminaires 33 292 · 88 898 or
for max. 2 luminaires 33 293 · 88 899
Protection class IP 65 · Safety class I
Cast aluminium and aluminium
Additive colour mixing can be performed using any commercially available DALI colour light control (DT 8, RGBW, xy) system. If there is no internal DALI power supply in the DALI colour light control system, DALI power supply 70 866 can be used.
A separate power supply unit is required for operation.
For more information about BEGA power supply units, see Page 436.

71 018 For RGB recessed luminaires 24V DC

DALI power reducer

Control device for automatic power reduction/night-time brightness reduction with integrated DALI power supply for up to nine standard DALI operating devices.

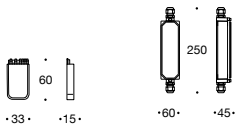

Optionally adjustable to two operating modes:

Operating mode 1: Power reduction with control phase

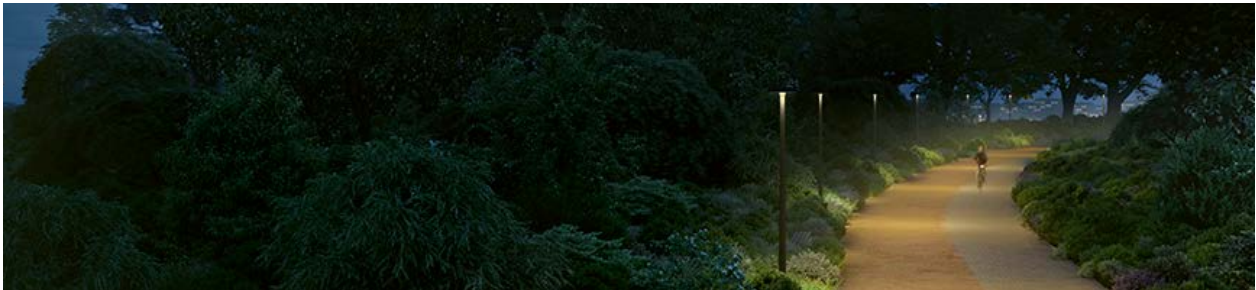

Operating mode 2: Power reduction by way of virtual midnight calculation

Not suitable for use with a separate DALI power supply.

71 145 Ready-to-connect unit for retrofitting in luminaire poles or existing installations.
Protection class IP 65 · Housing made of fibreglass-reinforced synthetic material · Colour graphite

71 150	For installation in device boxes
71 145	In device box IP 65

BEGA BugSaver® control devices

Control devices in different designs for switching the colour temperature and for reducing the power for BEGA BugSaver® luminaires.

Two operating modes are optionally available:

- Switchover via control phase
- Switchover via virtual midnight calculation

Power supply for up to nine BEGA BugSaver® luminaires.

Not suitable for use with a separate DALI power supply.

71 303	BEGA BugSaver® control device · IP 20
71 304	BEGA BugSaver® control device in the device box for installation in luminaire poles · IP 65
71 305	BEGA BugSaver® control device in the connection box for installation in luminaire poles · IP 54

LED lamps

We offer a selection of energy-saving and long-life LED lamps in switchable or dimmable versions for our luminaires with conventional G9, E14 or E27 socket.

Our LED lamps are also available as a radio-controlled version. Based on the Zigbee standard, these LED lamps can be easily integrated into BEGA Smart, wibutler or other Zigbee-controlled Smart Home systems. Our Zigbee lamps are optionally available as Tunable white or RGBW versions.

The data quoted in the table may change as a result of technical progress.

Information concerning the current values is always provided in the data sheets on our website.

If the Zigbee 3.0 radio-controlled LED lamp is intended for outdoor use, the luminaire should be rated at least IP 65.

BEGA power supply units for LED luminaires

Some LED luminaires in our range are supplied without a power supply unit. Suitable power supply units with output voltage of 24 V DC and 48 V DC can be found on this page. Multiple luminaires can be connected to one power supply unit; when doing so, please note the maximum output of the power supply unit and the maximum cable length, due to the drop in voltage. You can find detailed information about installation in the instructions for use on our website.

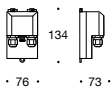

Installation and operation are subject to national safety standards.

Power supply units for compact downlights

Input voltage: 220–240 V 0/50–60 Hz
Protection class IP 65
Housing made of glass fibre reinforced synthetic material

The power supply unit can be installed together with the luminaire in the installation housing.

--------	-------------------------

BEGA surge protection and inrush current limiter

LED luminaires are at risk of damage from overvoltage, which can cause e.g. partial or complete failure of the LED modules, loss of brightness, or failure of electronic components. Overvoltage surges have a negative effect on the service life of the luminaires, even if no immediate fault occurs. BEGA recommends the use of surge protection components in compliance with EN 61643-11 for the reliable protection of LED lighting systems.

LED power supply units can generate very high starting currents for several milliseconds when switching on. Inrush current limiters serve to reduce these currents so that more luminaires can be operated on one automatic cutout. You can find the maximum number of luminaires per automatic cutout from the data sheets for our luminaires.

These components are suitable for various applications and considerably increase operational safety.

Electronic load relay

Electronic load relay with make contact for spark-free and bounce-free switching of single-pole sustained loads up to 1 kW.

Through specific switching in the voltage zero crossing, inrush currents are reduced and less wear is generated on downstream components.

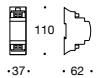

71 320 Electronic load relay

Inrush current limiter

Limits the starting current of electronic ballasts and LED drivers to 33.9A for 300 ms, an acceptable value for circuit protection.

For DIN rail mounting

71 039 Inrush current limiter

Surge protection

for single-phase end devices (on/off power supply unit)

CITEL surge protection type 2 + 3 (in accordance with EN 61643-11) for the protection of single-phase end devices (on/off power supply unit).

For installation in luminaires or connection boxes

71 045 Surge protection

Surge protection

for single-phase end devices (on/off power supply unit)

BEGA UniLink® system components

for luminaires from Pages 212–217
for floodlights with connection adapters from Pages 116, 120, 123, 129 and 130

BEGA UniLink® luminaires are factory-equipped with a five-metre connecting cable with a waterproof BEGA UniLink® plug connector. These can be connected as needed to BEGA UniLink® extension cables or BEGA UniLink® five-way distribution boxes.

Please note:
To connect a BEGA UniLink® luminaire to the power network, it is necessary to have at least one mains plug or one connection cable with free cable end.

Accessories for BEGA UniLink® floodlights with connection adapter

for BEGA UniLink® floodlights with connection adapter from Pages 116, 120, 123, 129 and 130

BEGA floodlights with connection adapter can be combined with numerous accessories for installation on trees, pipes or wooden structures, for example.

The accessory and the floodlight with connection adapter are quickly and easily screwed together via a secure mechanical connection. All floodlights with connection adapter are factory-equipped with a five-metre connecting cable with a waterproof BEGA UniLink® plug connector. The electrical connection of the floodlight is established via the BEGA UniLink® system components.

BEGA UniLink® Play system components

for luminaires from Pages 220–221

BEGA UniLink® Play includes small-format floodlights and pathway luminaires – including matching extension leads. This requires a BEGA UniLink® Play power supply unit, which provides a safe 48-volt operating voltage.

An integration into BEGA Smart using BEGA Smart Link allows individual control and automation of these luminaires. RGBW floodlights create coloured light in the garden and require no additional control components.

If you want to control your BEGA UniLink® Play luminaires, they can be integrated into the BEGA Smart System with BEGA Smart Link, which can be controlled via app, remote control or automation.

The use of RGBW floodlights opens up a wide range of possibilities for garden lighting. Each BEGA UniLink® Play RGBW floodlight can be individually smart-controlled without additional components.

Accessories for BEGA floodlights

with G½ threaded connection

There are a large number of different installation situations for floodlights. For most applications, we can offer devices ready for connection. For all other situations, you will find accessories here that can be individually bolted to BEGA floodlights with G½ threaded connection in accordance with ISO 228. BEGA floodlights with G½ threaded connection ordered in combination with accessories 70 252, 70 283, 70 280, 70 889 or 70 204 on Page 443 are supplied factory-assembled and ready for connection. You can find data sheets and instructions for use for all accessories on our website.

70 280 Pipe clamp**Lashing strap with G½ threaded connection**

For the non-permanent installation of floodlights with G½ threaded connection on trees, poles, columns or cylindrical structures

Cast aluminium · Black polyester lashing strap

Clamping range Ø150–600 mm

10 m connecting cable with type F mains plug

70 889 Lashing strap**Earth spike with G½ threaded connection**

For portable installation of floodlights with G½ threaded connection in soil

Glass fibre reinforced synthetic material

Insert depth 250 mm

5 m connecting cable with type F mains plug

70 204 Earth spike

Accessories for BEGA high-performance floodlights

With mounting bracket with a central hole Ø 22 mm
and 2 holes Ø 9 mm · Distance apart 80 mm

There are a large number of different installation situations for floodlights.
On this page, you will find accessories for the permanent operation of the
BEGA high-performance floodlights with mounting brackets.
Please refer to the technical information for each accessory in the data sheets
and the instructions for use on our website.

Pole tops for high-performance floodlights

Installation-ready pole tops for the installation of multiple BEGA high-performance floodlights on a BEGA steel luminaire pole of groups 62 or 72.

Please read the technical information for the pole tops provided in the data sheets and the instructions for use on our website. For structural reasons, shields must not be used.

Multiple cross beam for high-performance floodlights

For the arrangement of BEGA high-performance floodlights in groups on wall surfaces, supporting structures and under ceilings. On ground surfaces, the unit can be mounted either on a foundation or two anchorage units – 70 896. Further information on BEGA anchorage units can be found on Page 447.

Please note:

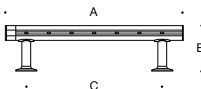

An installation adapter 71 216 is always required for the installation of a BEGA high-performance floodlight. The maximum number of high-performance floodlights that can be mounted depends on the floodlight type. All the relevant information and technical data can be found in the instructions for use on our website.

Anchorage units and screw-on bases

For mounting BEGA garden and pathway luminaires in soil and on foundations

The luminaires on Pages 198 to 209 are ideal for illuminating private outdoor spaces. These garden and pathway luminaires can be installed either with an anchorage unit or by means of a screw-on base. The anchorage unit or screw-on base and line connector **are supplied with the luminaire** and are included in the price of the luminaire. Please observe the technical information for the BEGA garden and pathway luminaires in the data sheets and the instructions for use on our website.

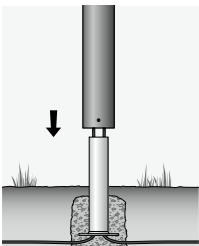

Anchorage section for the luminaires on Pages 198 to 209

For the permanent installation of BEGA garden and pathway luminaires in a flowerbed or an unpaved surface, for example.

The anchorage unit made of hot-dip galvanised steel is included in the scope of delivery of the luminaire.

With this type of installation, an underground cable is routed into the anchorage unit from below. The underground cable and anchorage unit are set in concrete. The luminaire is then connected, placed on the anchorage unit and bolted into position.

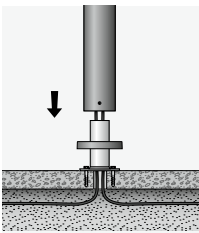

Screw-on base for the luminaires on Pages 198 to 209

For the permanent installation of BEGA garden and pathway luminaires on foundations created on site or on other paved surfaces.

A screw-on base made of hot-dip galvanised steel is included in the scope of delivery of the luminaire.

With this type of installation, an underground cable is routed into the screw-on base from below. The base is bolted onto the mounting surface. The luminaire is then connected with a line connector and fixed to the screw-on base.

BEGA distribution boxes
for through-wiring garden and pathway
luminaires and connecting pillars

Through-wiring within the luminaire is not possible for certain luminaires or connecting pillars. In this case, we recommend BEGA distribution boxes for installation in soil. After connecting the electrical lines to the terminals, the distribution box must be filled with the sealing compound supplied.

Distribution box for installation in soil

For the connection of up to 6 luminaires in soil.

Protection class IP 68 · Safety class II · Housing made of synthetic material

7 cable entries · connection terminal 5 × 4□

Sealing compound: Cartridge with gel filling

After installation, the distribution box must be sealed.

You can find the complete technical data for the distribution boxes in the instructions for use on our website.

70 730 Distribution box · 7 cable entries	95	95	55

Screw-on bases and anchorage sections

For different installation requirements, suitable permanent mounting solutions are available. **Screw-on bases** are bolted on for secure installation of light building elements, for example on existing on-site foundations. **Anchorage units**, on the other hand, are fastened directly into the ground with concrete and used for stable anchoring of bollards, light building elements, pole-top luminaires and bicycle stands in the ground. **Anchorage units with connection compartment** are specially designed for on-ground luminaires and can accommodate a BEGA distribution box for protected through-wiring.

Please refer to the corresponding instructions for use and data sheets on our website when planning and installing the luminaires.

Type J	Switzerland and Liechtenstein	10 A · 250 V ~

Connection boxes and accessories for BEGA pole-top luminaires, Light building elements and bollards

Connection boxes are used to connect bollards, light building elements and pole-top luminaires. In addition to serving as the electrical transfer point from the underground cable to the luminaire supply line and as the electrical fuse protection of the luminaires, they can take on various additional functions through integrated components. You can find the complete technical data in the data sheets on our website. The installation and operation of these connection boxes are subject to national safety regulations.

Connection boxes for bollards or luminaire poles

BEGA corrosion protection and care set for stainless steel

The BEGA corrosion protection and care set is intended for the care and preservation of the stainless steel elements of Outdoor BEGA luminaires, especially for demanding environments such as seawater and swimming pools. The efficient BEGA protection and care product is applied by means of a brush applicator or the sponge included evenly applied on the stainless steel components. We recommend repeating the process annually to ensure a long service life and long-term rust protection of the BEGA products.

Content:

- Brush applicator with 5 ml stainless steel care product
- Sponge
- Microfiber cloth

71 276 Stainless steel care set for BEGA stainless steel outdoor luminaires

**BEGA paint care set for BEGA outdoor luminaires**

The BEGA paint care set is suitable for the maintenance of painted BEGA luminaire surfaces in outdoor areas.

The set consists of a cleaner and a refresher.

The BEGA paint care set is used to first clean and then activate and refresh the paint colour of the outdoor luminaires for the efficient BEGA protection of metallic surfaces.

For outdoor use only

Content:

- 500 ml Cleaner spray bottle
- 500 ml Refresher bottle
- Cleaning sponge
- Microfiber cloth

71 179 Paint care set for BEGA outdoor luminaires

**BEGA special cleaner for synthetic surfaces**

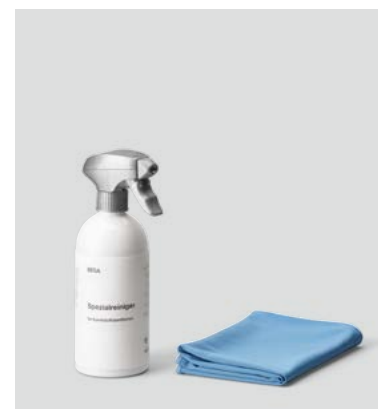

The BEGA special cleaner for synthetic surfaces was developed specifically for the gentle cleaning and care of synthetic materials.

For the cleaning BEGA NeoGlass®, PC, PE, PMMA and other types of synthetic materials.

Content:

- 500 ml Special cleaner spray bottle
- Matrix fiber cleaning cloth

• **71 369** Special cleaner for synthetic surfaces

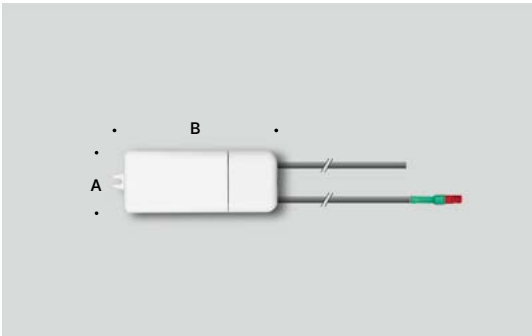

Accessories for indoor luminaires

Power supply units for **recessed luminaires**

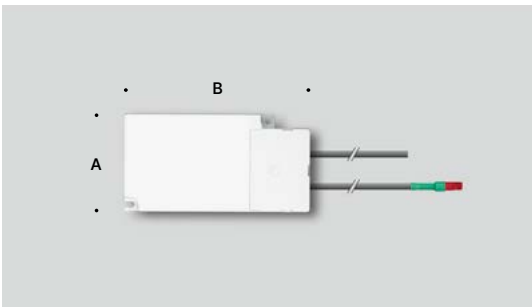

For some BEGA recessed luminaires, the suitable power supply units must be ordered separately. Available models include both on/off power supply units and controllable DALI power supply units, which are specially designed for operating the luminaires. These power supply units are generally subdivided into four designs. They are available as accessories and fit in the corresponding BEGA installation housings, which are designed to enable integration without a problem.

Input voltage: 220–240 V 0/50–60 Hz
Protection class IP 20

Accessories for ceiling installation of pendant luminaires
from Pages 380–388

We have developed suitable accessories for cases where the pendant luminaire's standard canopy cannot be used or where several luminaires are to be installed at one installation point.

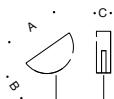

Canopies, recessed suspension devices, cross beams and ceiling distributors are accessories for BEGA pendant luminaires and must be ordered with the pendant luminaires.

We also supply matching devices for the installation of luminaires in rows or groups as custom-made products. We would be pleased to assist you in your detailed planning.

Canopy for sloping ceilings

For the installation of pendant luminaires on ceilings or other structures with an inclination of up to 60°.

Urban Furniture

The quality of the experience of urban architecture is also influenced by illumination and areas that make people want to stay and spend time in a space. Luminaires and urban furniture for public spaces

have to be fit for purpose for many decades to come.

Our furniture for public and semi-public spaces transforms open spaces into high-quality places to spend time in. The exclusive design with unusual components gives urban districts a unique character.

Public spaces provide plenty of opportunities for encounters. We want to make use of these possibilities. That's why our street furniture creates islands of gathering. As a result, we don't just casually wander through streets, parks and squares: we stop and linger. Using this approach, we create vibrant city centres, company premises and residential developments. Public spaces become an extension of our home.

Our street furniture is robust, durable and sustainable – and extremely attractive. It serves its purpose effectively by blending harmoniously into public spaces, both practically and aesthetically.

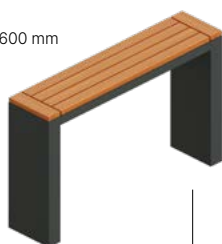

The flexible system for freedom of design in urban spaces

Our modules can be combined as needed to create street furniture for public areas that blends seamlessly into its surroundings. They create the perfect atmosphere everywhere from traditional old towns to Mediterranean marinas and botanical gardens.

Our modular street furniture uses sturdy powder coated aluminium and high-quality Accoya® wood. Designed for daily use – and the passage of time. Individual elements can also incorporate light to create a pleasant atmosphere at night.

See where you're sitting

Discreet, indirect illumination can identify or emphasise certain areas in the dark.

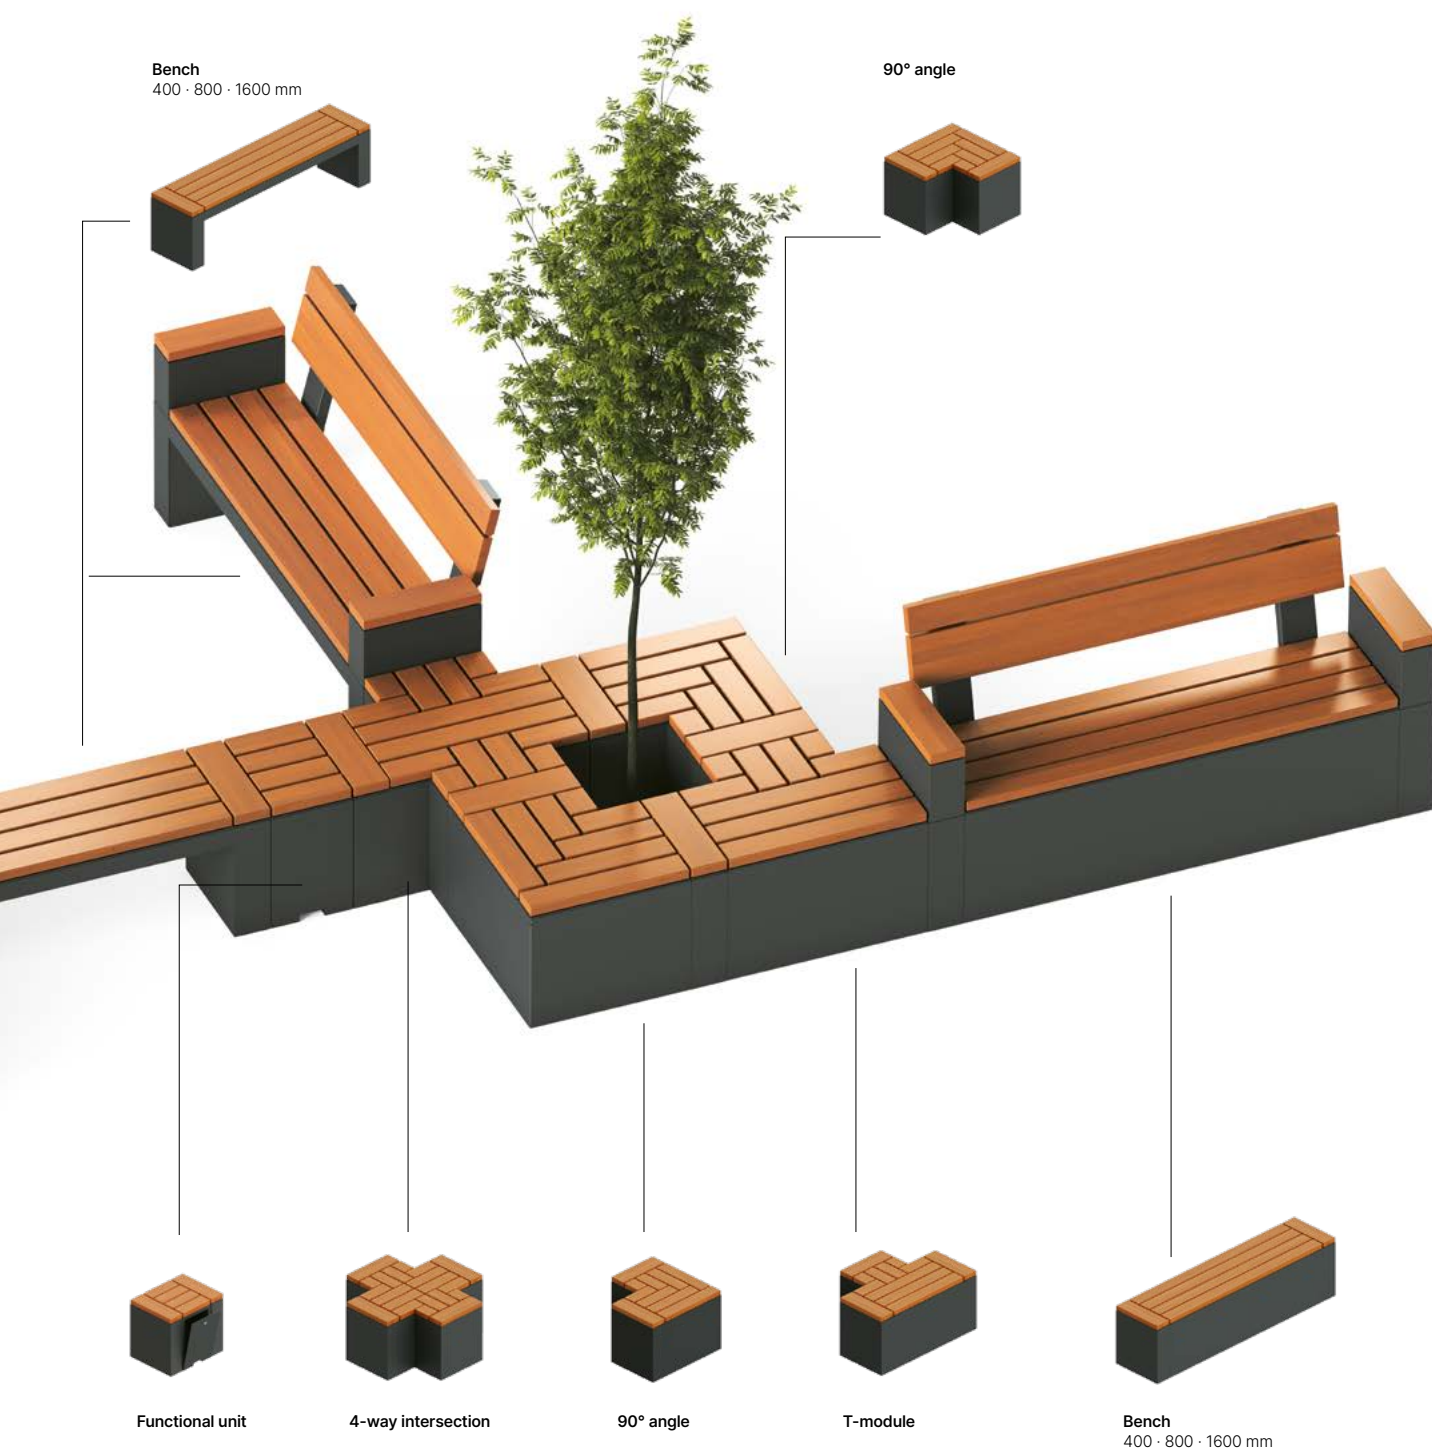

Ready, set, go

The modules are connected together on site – the individual elements are very easy to install.

Accoya® wood

**Bench covers for installation
on concrete elements on site**

Accoya® wood bench covers offer a practical option for transform existing concrete structures into functional and durable seating areas. The premium-quality Accoya® wood is renowned for its stability, weather fastness, and sustainability. The structure is additionally reinforced with powder-coated steel frames and aluminium panels for additional rigidity and a simple, yet elegant, timeless look.

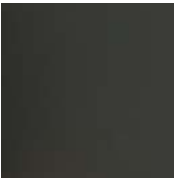

The bench covers are designed for attachment directly on the existing concrete elements.

Urban furniture · Outdoor furniture

Our products for semi-public outdoor areas form a coherent series of fixed furniture that can be firmly bolted to the ground. This allows you to create a structure and atmosphere that visitors will remember.
The urban furniture can be combined in a variety of ways.
It is designed with a robust frame made of aluminium and laminated board surfaces. A durable product that is resistant to abrasion, impacts, scratches and large temperature fluctuations.

High-pressure laminate HPL

To manufacture HPL sheets, multiple papers soaked in melamine and food-safe phenol resin are joined together under high pressure and heat. The surface created in this way is light-resistant, odour-neutral, easy to clean and can withstand water and alcohol.

Electrical safety

The luminaires in this catalogue are designed and manufactured on the basis of the IEC/EN60598 (VDE 0711) regulations. The majority of the luminaires bear the corresponding test symbol. The remaining luminaires have been or will be submitted for testing, but the certification and approval procedure has not yet been completed. Please feel free to contact us at any time for news about the current state of the approvals. Custom-made products are manufactured on the basis of the above-mentioned standard. All luminaires are subject to continuous production monitoring and quality inspection.

Special electrical equipment
Emergency lighting

We will be happy to inform you about the options and costs if you wish to integrate our luminaires in emergency escape lighting systems in compliance with DIN VDE 0108-100, or prepare them for connection to a central battery system or emergency lighting system.

Safety symbols

The ENEC symbol (European Norms Electrical Certification) is a European test and certification symbol for luminaires and electrical components in luminaires. The number 10, with or without the VDE symbol, signifies that the test/certification symbol was issued by the VDE Institute for Testing and Certification.

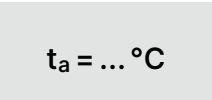

Luminaires with this symbol have passed a ball impact test and are therefore suitable for use in sports facilities.

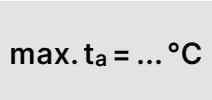

Due to their limited surface temperatures, luminaires bearing this symbol are suitable for business premises where dust or fibrous material present a fire hazard (VDE 0711 · Part 2 - 24).

Luminaires bearing this symbol must not be in direct contact with thermal insulating materials.

The $t_a = \dots^\circ\text{C}$ symbol in accordance with IEC/EN 60598 (VDE 0711) indicates the permissible ambient temperature at which a luminaire may be operated. Our luminaires are generally designed for an ambient temperature of $t_a = 25^\circ\text{C}$, i.e. for indoor use.

The max. $t_a = \dots^\circ\text{C}$ symbol indicates the maximum ambient temperature at which a luminaire may be operated.

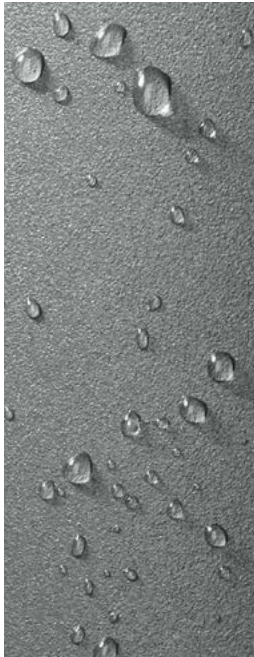

The CE symbol is affixed at the manufacturer's responsibility and is not a safety symbol. The manufacturer uses it to document conformity with European Union directives.

The number alongside the CE symbol indicates that an inspection and certification body checks compliance with the guidelines.

Our urban furniture are certified by the independent certification body TÜV Rheinland. We are happy to provide you with the corresponding certificates on request.

Protection classes

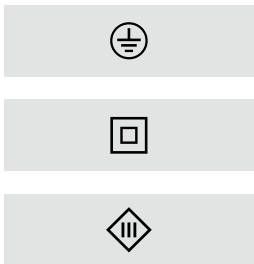

These classes provide information on a luminaire's stability in withstanding the penetration of dust, solid foreign bodies and water in accordance with IEC/EN 60598 (VDE 0711). The relevant protection class IP (International Protection) is marked on the luminaire in accordance with the IEC 529 coding system.

Protection against foreign objects

IP 1x	Protection against ingress of solid objects \geq 50 mm
IP 2x	Protection against solid objects \geq 12 mm
IP 3x	Protection against solid objects \geq 2.5 mm
IP 4x	Protection against solid objects \geq 1 mm
IP 5x	Dust protected
IP 6x	Dust-tight

Water protection

IP x1	Protected against vertically dripping water
IP x2	Protected against drops of water falling at angles up to 15°
IP x3	Protected against spray water falling at angles up to 60°
IP x4	Protected against splashing water
IP x5	Protected against water jets
IP x6	Protected against strong water jets
IP x7	Protected against occasional immersion
IP x8...m	Protected against continuous immersion

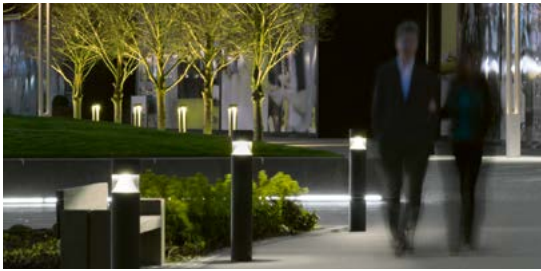

Safety classes

Safety class I designates luminaires with an earth connection. In the event of a fault, the power supply is switched off by overload/residual current protective devices.

Safety class II designates luminaires that have not only functional insulation but also additional protective insulation. Under fault conditions, no dangerous voltage can reach metal parts which can be touched. Many safety class I luminaires are also available in safety class II. Please contact us.

Safety class III indicates luminaires for safety extra-low voltage. Connection only to safety transformers in accordance with EN 61558/VDE 0570, EN 61347/VDE 712 or VDE 0100 Part 410. The transformer must be approved for this type of installation.

Light distribution curves, illumination diagrams and isolux diagrams

Careful planning work is required to solve lighting tasks. The necessary information about the properties of luminaires is given in light distribution curves, illumination diagrams and isolux diagrams.

The following section provides basic explanations and clarifications on this topic.

You can find lighting diagrams and other planning aids on our website www.bega.com under the specific article number of the luminaire.

Light distribution curves

Light distribution curves specify the direction and intensity of the light emitted by a luminaire. The absolute luminous intensity value in candela (cd) for LED luminaires is obtained through the multiplication of the value read off the diagram in cd/klm by the luminaire luminous flux in kilolumen (klm).

Light distribution curves are usually presented in a polar coordinate system (Fig. 1).

For floodlights, the light distribution is specified in Cartesian coordinates (Fig. 2).

In the diagrams, the half beam angles are indicated:
continuous line (C0–C 180 · β = 32°) and
dotted line (C90–C 270 · β = 88°).

The luminous intensity values are plotted on the vertical axis and the beam angles on the horizontal axis.

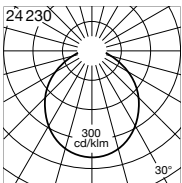

Fig. 1

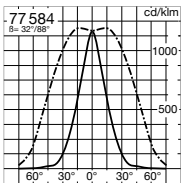

Fig. 2

Illumination diagrams

Illumination diagrams for floodlights (Fig. 3) indicate the dimensions of the area bounded by the two half beam angles (Fig. 4) and the average degree of illuminance of this area in relation to the distance. Using the parameters “floodlight – area – horizontal axis” it is possible to take the following readings:

- The height – continuous line (C0–C 180 · β = 27°) – and the width – dotted line (C90–C 270 · β = 76°) – of the limited area on the vertical axis on the right
- The average degree of illuminance (parabola) in lux on the vertical axis on the left

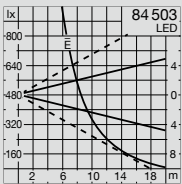

Fig. 3

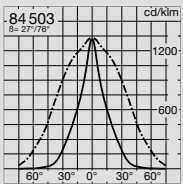

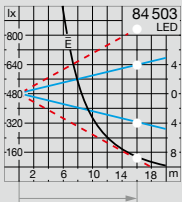

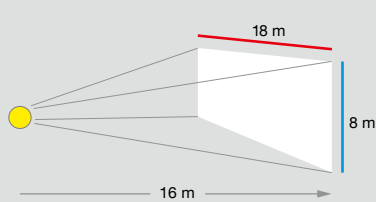

Fig. 4

Determining the distance of a floodlight from the illuminated surface using an illumination diagram

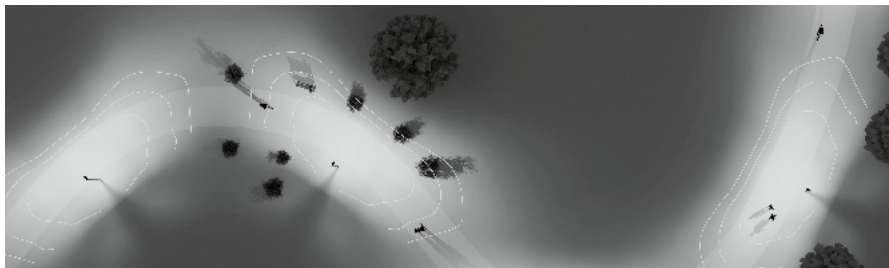

Distance from the floodlight to the surface: 16 m

The façade to be illuminated has a height of 8 m (blue line) and a width of 18 m (red line).
The high-performance floodlight 84 503 with flat beam light distribution has a half beam angle of 27° and 76°.
At a distance of 16 m, the half beam angles cover the dimensions of the façade exactly.
The parabola states the mean degree of illuminance on the illuminated surface in lux.

These values can be read from the left vertical axis of the illumination diagram. The average degree of illuminance on this reference surface is therefore 150 lx.
Changes in the distance between the floodlights influence not only the average degree of illuminance but also the size of the illuminated surface. It must be noted that the diffuse light illuminates more than the previously calculated surface. As a result, even the peripheral areas of a slightly larger façade would still be well-illuminated.

Planning aids

We can provide planning aids in various formats in order to optimise your planning of our luminaires in your projects. You can find these files on every product page on the BEGA website by clicking on the article number under the "Downloads" tab in the "Planning aids" section.

DIALux, the light planning software for the professional planning, calculation and visualisation of light, is available free of charge from the website of the German Institute for Applied Lighting Technology (DIAL).

On our website you will find the data of our luminaires for use in your DIALux projects. DIALux files for downloading as .uld files are available on our product pages. Using the transfer link you can apply the data directly in the currently opened project. Planning data for the entire BEGA delivery range can also be accessed directly in DIALux by installing our plug-in. Once the DIALux plug-in has been installed, the data can be updated from within the plug-in window by using the integrated update mechanism.

We provide our product data as parametric objects for **"Building Information Modelling" (BIM) software**. You can currently find families for **Autodesk Revit** from version 2020 upwards in German and English on our website. The families contain not only 3D models and photometric data but also extensive additional details of our products which are continuously updated. As an additional option, you can download the pure geometries as **3D DXF data**.

Find out more at bega.com/planningaids

Isolux diagrams

Isolux diagrams (Fig. 5) specify the distribution of the degree of illuminance on an illuminated surface. Points with the same degree of illuminance are connected by curves (isolux lines). The luminaire is perpendicular to the drawing plane at the mounting height (H) above the coordinate origin. The mounting height or the corresponding pole height is indicated depending on the type of luminaire. In the case of luminaires with rotationally symmetrical light distribution, the resulting isolux lines are concentric circles.

The light point interval is approximately twice the distance at which the isolux line runs at half the value of the desired minimum illuminance.

Example:

In the isolux diagram shown, the 0.5 lx line runs laterally at a distance of 15 m from the coordinate origin. If a path is to be illuminated ($E_{\min} \geq 1 \text{ lx}$), then a light point spacing of approx. 30 m must be selected.

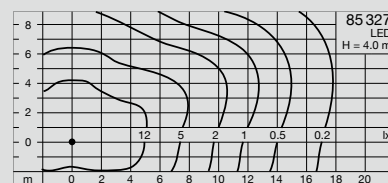

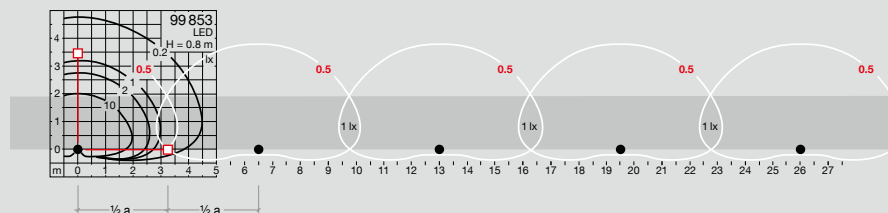

Fig. 5

Determining the luminaire spacing "a" for pathway lighting of $E_{\min} = 1 \text{ lx}$ on the basis of the isolux diagram

When planning pathway lighting, 1 lx is defined as the standard minimum degree of illuminance. Consequently, the 0.5 lx line in the isolux diagram is relevant for determining the luminaire spacing. This 0.5 lx must add up to a degree of illuminance on the assessed surface of 1 lx to define the luminaire spacing. This results in light point spacing of 6.5 m. During planning, local

conditions such as the colour and characteristics of the ground must also be taken into consideration. These factors have a significant influence the reflective behaviour of light and can lead to the impression of insufficient illumination even when the degree of illuminance meets the standards. An illumination test at the installation site is therefore recommended for optimal planning results.
